No. 19589.

Dublin Castle, 27th July, 1891.

GENTLEMEN,

I have to acknowledge the receipt of your letter of the 25th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Fortieth Report on the District, Criminal, and Private Lunatic Asylums in Ireland.

I am,

Gentlemen,

Your obedient servant,

West Ridgeway.

The Inspectors of Lunatics, Dublin Castle.

### FORTIETH REPORT

OF THE

## INSPECTORS OF LUNATICS

. ....

DISTRICT, CRIMINAL,

### PRIVATE LUNATIC ASYLUMS

IN IRELAND.

TO HIS EXCELLENCY LAURENCE DUNDAS,

EARL OF ZETLAND,

LORD LIBUTEMANT-DENERAL AND GENERAL GOVERNOR OF IRELAND.

Lunacy Office,

Dublin Castle, July 1, 1891.

MAY IT FLEASE YOUR EXCELLENCY:

We have the honour to submit the Fortista Annual Report on
the condition and care of the insane in the various institutions
throughout Ireland, for the year onded December 31st, 1890.

### THE NUMBER AND DISTRIBUTION OF THE INSANE.

According to the Returns made to us there were in Ireland on Number and the lst January last, 16,251 persons of unsound mind under Distribution of cure, being an increase of 225 on the number at the commence-Insect. ment of the year 1890.

The summary of these persons on the 1st January, 1890, and on 1st January, 1891, is as follows:—

	0π	let January	, 1890.	On 1st January, 1881.				
_	Male	Fo- males.	Total.	Males.	Fe- males.	Total		
In District Asylums,	. 6,02	6,143	11,180	6,194	5,231	11,488		
" Private Asylums,	. 25	9 372	631	253	368	631		
" Central Asylum, Dundrum, .	. 14	6 20	176	150	29	375		
" Werkhouses,	. 1,60	0 2,438	4,038	1,556	2,396	3,961		
"Gaols, ;		1 -	1	2	-	1		
	8,04	3 7,963	16,098	8,165	8,066	16,251		

This summary does not include the number of insens in private dwellings or wandering at larga. Six "Government Patients" remaining in the Stewart Institution (see page 29), are also excluded. From the above roturn it will be seen that the numbers in

district asylums have increased by 308, while the insane in workhouses have decreased by 77, leaving at the end of the year

an increase of 225 in the numbers under care.

Table J(spec 27) shows the distribution of the immas in pable institution in Iraland from 1830 to 1830 inclusive. Since 1830 the number of the immas in district anylums has increased from 500 to 10.00 keV or 10.00

Increase of insanity.

The following Return shows the Proportion of Lunatics under care per 100,000 of the estimated Population for each Year from 1880 to 1890:—

Чтане.				Estimated Population	Rumber of Louetier under care.	Preportion per 100,000 of Estimated Population.
1880,				5,202 518	12,082	219
1881,				5,144,983	13,338	220
1882,				5,097,858	12,704	268
1883,			- [	5,015,282	13,981	578
1884,				4,962,570	14,178	285
1885,			. [	4,994,343	14,307	290
1886,				4,889,416	14,590	238
1887,			.	4,337,313	15,167	213
1888,				4,777,534	15,551	225
1889,				4,780,508	15,026	\$38
1690.			!	4,058,318	36,951	- 345

This Return shows an increase in the insane under care from 229 per 100,000 in 1880 to 346 per 100,000 in 1890. Such an increase of insanity in a population so rapidly decreasing as that of Ireland, which shows a falling off of 468,674 inhabitants, of 91 per cent, since 1881, must call for the consideration of all who

take an interest in the welfare of the country, and descrees the fullest and most careful inquiry in order to ascertain-1st. How far this increase of insanity can be explained by admissions to asylums from among the number of lunatics at large already existing in the country. These in 1870 numbered 6,700, according to the returns of the Inspector-General of Constabulary. We have been unable as yet to obtain a return of their number at the present Census, but the duration of the disease amongst the admissions to public asylums would tend to show that a large proportion of the persons now being registered as insane would have been returned as lunatics at large in the previous Census. Table No. V. (Appendix A) shows that out of the total number (3,095) admitted to public asylums during the year, in 1,151 cases the disease had existed more than twelve months, or had shown itself in a previous attack, and therefore it may be presumed that the unregistered lunatics have decreased in some proportion to the increase in the admissions to public asylums and workhouses. 2nd.—How far the rapid decrease of the population by emigration would also tend to show an apparent increase of insanity. The flow of emigration going on from year to year would, as a rule, tend to remove the healthy and strong both in mind and body, thus leaving the weak and infirm, deprived of any sort of support, as a burden on the public rates. The present number of the insane in Ireland therefore properly belongs to a much larger population than now exists in the country.

Table II. (page 28), shows the emigration from each county in Ireland, with the changes in the proportion of insanity to coolation from 1861 to 1871.

### DISTRICT ASYLUMS.

On the 1st January, 1891, the number of the insane in the Determinant twenty-two district asylums amounted to 11,488, and of these 210 contributed towards their maintenance, while 11,278 were Psylog supported entirely from the public rates.

210 contributed towards their maintenance, while 11,278 were Pesupported entirely from the public rates.

Attention may be called to the smaller number of the insance towards when maintenance any contribution is need by friends.

towards whose maintenance any contribution is made by friends in Ireland as compared with the number in Scotland who are classed as private putients, i.e., patients coming under this denomination in Royal, District, and Private Asylums who defray the total cost of their maintenance.

This proportion will be best seen from the following return :--

	Number of Private Patients	Number of Paurer Patients	Proportion per cent. o					
	in Asylums on 31st December, 1852.	in Asylums on list December, 1887.	Private Patients.	Pauper Patients.				
Scotland,	1,765	10,223	14-7	85 <b>-</b> 8				
Ireland,	847	15,002	5-3	94-7				

ASYLUNE.

No doubt the poverty existing in Ireland will to a certain degree explain why the number supported, wholly or in part, by family contributions is so small.

Again, under the existing law the asylum officials alone are responsible for ascertaining the circumstances of the insane admitted, or how fartheir friends can be made responsible for their maintenance. These officials have no direct means of ascertaining particulars, and the difficulty of obtaining any information is enhanced by the fact that in many cases the patients had resided at long distances from the asylum. But above all by far the larger proportion of the admissions to district asylums take place under the Dangerous Lunatic Act, 30 and 31 Vic., cap. 118. sec. 10. by which the Innatic practically becomes a criminal, for whose detention no payment can be enforced." Thus for the year ended 31st December, 1890, 2,165 persons were committed as dangerous lunatics ont of a total number of 3,095, or in other words 70 per cent., while in Scotland, during the year 1889 (the figures for 1890 are not yet published), only five persons or something under '2 per cent. were so admitted.

Admissions.

THE ADMISSIONS during 1890 into these institutions were 8,095—1,643 men and 1,462 women; of these 2,451 were first admissions, and 644 had been previously under treatment. Table III. (page 29) shows the number who have been ad-

mitted to these establishments for the past ten years. In Ireland there is no direct power of transfer from one sayims to another. Such transfers can only take place (a) by removal from a private to a district asylum, (b) as a private petient, or (c) from the crimical asylum to a district asylum, and these transfers are

so few as not to call for special remark.

Excess of Male Patierts admitted.

The proportion of male to female patients in Irish district asylums is very remarkable: in England and Scotland the semales exceed the males, while in Ireland the males greatly exceed the females.

The following Tabular Statement gives the Proportion of Males and Females in every 100 Fauper Patients in (a) the County and Borough Asylums of England, (b) the Royal and District Asylums of Scotland, and (c) the District Asylums of Ireland on the 31st December, 1889 —

Females.	ŀ
55	
51	l
46	
	51

<sup>•</sup> As an illustration of the ignorance which prevails on this subject we understand that one of our most influentful Constant of twice precute proposed to estimate the two proposed to estimate the proposed twice the proposed to estimate the proposed twice the proposed to estimate the proposed that the proposed to estimate the proposed to estimate the proposed to estimate the proposed to estimate the proposed to the proposed to estimate the proposed to the

That the number of males admitted abould exceed the females cannot be explained by any difference in the form of disease occurring in Ireland. On the contrary, we find that General Paralysis—a disease to which the male sex is peculiarly proceeds with much greater frequency in England and Scoland.

ASTLUES.

The following Table shows the relative frequency of General Paralysis and Epilepsy amongst (a) the admissions to the District and Private Asylums in Ireland, and (b) the admissions to Asylums in England\*:—

Total Number Patients of mitted						Number of Epilepties admitted.			Number of Gentral			Proportion per Cent, to Total Patients admitted.							
					Patie	nta odo	sitted.	Ī.	dinit	ted.	P	lositt	tios	or:	Cyllop	tion.	O. Pi	Gene unilyti	esl ct.
Ireland,					M.	P.	E.	M.			м.	F.	T.	μ. Ε	F.	25.	M.	r.	n.
England,					7,572	7,614	14,695	737	591	1,258	1100	207	1857	101	618		19-1	24	97

The explanation of this relative excess of male patients would appear to us to be found in the cumbrous and difficult procedures necessary to obtain admission to public asylums in Ireland; so that the women, more easily outstulled in their bomes or contribuling less to the family support, remain at home or gravitate to the workhouses.

ADMISSION FORMS.—Under the existing regulations, admission Admission is obtained to Irish Public Asylums under three different forms:

(1) as a private patient contributing towards maintenance under the Privy Council Rules. (2) as an ordinary patient under these Rules, (8) under sec. 10 of 30 and 31 Vic., cap. 118. As already stated, more than two-thirds of the whole, and threefourths of the male patients are admitted under the latter order: not because the patients are dangerous, for the number of really dangerous patients must be insignificant, but (first) because this order is mandatory, while under the other forme the patients may or may not be admitted according to the will of the Governors; (secondly) under this form only are means provided for the convevance of the lunstic to the Asylum, as under it he becomes a ciminal and is taken charge of by the police; and (thirdly) it alone provides for toe payment of the medical officer who signs the certificate of insanity. To obtain the admission of a lunatic under the Dangerous Lunatic Act the following steps must be tken:—lst, An affidavit is made that the lunatic is dangerous, whereupon he is arrested by the police; 2nd, he is brought before two magistrates sitting together who cause him to be examined by the medical officer of the dispensary district; 3rd, after committal the police convey the lunatic to the asylum. That this Act is objectionable, is we think manifest, inasmuch as

The figures in the case of England are for the year 1888.

Action

it converts the lunatic into a criminal, is cumbrous in action, and prevents the asylum authorities from recovering the cost of maintenance.

In any lunacy law to be introduced for Iruland, a new form of procedure for the admission of the insans to anylums, for rich and poor allike, should be introduced, somewhat in accordance with the form under the present English Lunacy Act. Provision should also be made for the convayance of the lunatic to the should also be made of put the conveyance of the propers of the propers of the produced for the segment of the modified elifers' fees.

Discharges.

THE DISCHARGES.—1,255 patients were discharged recovered.

This would give a per-centage on the admissions of 405. The
total number discharged improved or unimproved amounted to
504.

Deaths.

594.
THE DEATHS in these Asylums during 1890 were 986 in number (499 males and 437 females), giving a per-centage of deaths an the daily average number resident of 8.2. Table No. X. (Appendix A), giving the causes of death in these institutions, would show

Peat-mortem

that consamption was by far the most common cause, accounting for 255 of the total deaths, or a per-centage of 272. We fail it our duty to call attention to the parcity of post-morses examinations bed in public sayums in this country, as with the exception of the fitchmond, we may say that post-mortes the production of the fitchmond, we may say that post-mortes the production of the fitchmond, we may say that post-mortes the control of the fitchmond of the fitchmond of the fitchmond takes investigation cannot be to extensive upon the fitchmond during life may be discovered (2) to enfequent the asylms staff, preventing after accusations of ill-treatment being breught forward; and (3) to advance our knowledge of brain disease, and to affect the means to the medical officers of asylms for the Accusary and Summons—During the variety 1808, two sees

Sukides and Accidents. ACCURENT AND STUDENS—During the year 1890, two men and three women committed existed in the district agrims throughout Iveland. Of these, two women died by strangulation men and Londonderry. One men drowed himself is a water tank in the Sligo saylum. He had been at work in the care penters' shop, where he must have obtained the key of the tank. In Cork an old man amployed in driving a horse was littled by the care of the contract of the contr

In the case of a male patient whose death took place at the Schmond argum in June last fracture of several risks of took hieles were found after casals, with fracture of the bones of the great teswhich resulted in gaagemes. Fracture of one with had only been suspected during life. This patient, who had been for many years chief attendant at the Dundron Christial Aylum, was admitted to the Richmond, suffering from General Paralysis of the Insana, and was after admission very violent and creited. It

would appear from the evidence of some of the sensible patients that a struggle occurred between the patient and the attendant in whose charge he was. It was alleged he was thrown down, and that the attendant then sat on his chest, kicked and beat him. This attendant was dismissed. As there was no evidence against him except that of the insane, it was not considered wise to take further proceedings. He, however, took an action against the Board for wrongful dismissal. The case was tried, and resulted in a verdict for the Governors.

At the same asylum a female patient, who had been for years working in the kitchen, was found to be pregnant. The mental condition of the woman was such that no dependence could be placed on her evidence; but it was supposed that the guilty person was another patient employed in the stores. Unfortunately, so faulty is the construction of this department that proper supervision is impossible.

At Enuiscorthy a female patient opened with her fingers an old wound in her abdomen, and pulled out a coil of intestines. She, however, made a good recovery,

Eleven attempts at suicide were recorded, and twelve accidents, resulting in fracture or dislocation of bones,

All deaths occurring in district asylums are reported to the Coroners, who exercise their discretion in each case as to whether an inquest is necessary.

pendix A), giving the average number of patients for the year, and the actual accommodation according to the returns of the Board of Control, shows that increased accommodation for the insane in Irish public asylums is urgently required. Table III. (page 29) indicates that the admissions increase from year to year. sothatsofar as we are able to foresee, no diminution can be expected in the numbers for which asylum accommodation will be required for many years to come. In the various plans advocated from time to time for providing structural accommodation for the insane poor of Ireland, it has been suggested that less expensive buildings, with simple appliances and cheap structural arrangements, might be utilised for a large number of the insane. No doubt Proposed buildings suitable for the care of certain classes of lunatics might tion for the be erected at a lesser cost, or existing institutions, which are harmless lying idle, might be utilised for their benefit, and proposals of this insane. nature were definitely formulated by the Poor Law Union and Issaey Commission of 1879, which recommended, inter alia, that pertions of certain workhouses should be appropriated for certain theses of lunatics. In this way increased asylum accommodation might be obtained in some instances, but so far as we know the unoccupied workhouses are either so situated as to render it

impossible to procure, at any reasonable price, a sufficiency of land in their neighbourhood for the employment and recreation of the patients, or else the necessary structural and other changes would be very great. This is shown in the case of Gortin, one of the dissolved Unions in Tyrone, the workhouse buildings of which

OVERCROWDING .- All the district asylums throughout Ireland Insufficient may be said to be more or less overcrowded. Table II. (Ap-tion.

DOST ARCT ASTI-UMS.

were visited last year by Sir A. Mitchell, K.C.B., Mr. Holmes, C.R. and Dr. M'Cabe, with the view to determine whether it would in their opinion be possible to convert them into a provincial or auxiliary lunatic asylum. The conclusion at which they arrived is given in the 9th paragraph of their preliminary report recently published as a Parliamentary paper, in which, speaking of Cortin workhouse, they state that it would scarcely be possible to "convert it into satisfactory accommodation for lunatics. It would be better and cheaper to erect a new building.

Buildings suitable for harmless and chronic lunatics may as we have just stated be creeted or obtained at a less cost than would be required to build new asylums, or to make additions to those already in existence. It must, however, be remembered as regards the present condition of many of the public asylums of this country that the lunatic wards of a Scotch or English workhouse are much more handsomely decorated and better furnished. Many Irish asylums at the present time have nothing but white washed walls-are pitarly devoid of all those articles of decoration which render the wards of modern asylum home-like-and their farniture is of the most meagre and shabby description. When, therefore, we hear so much of the "costly edifices for the insane in Ireland," no accusation of undue liberality in their internal decoration can be reasonablymade against the Governors. Although it may be allowed that persons labouring under certain forms of insanity may be treated in establishments with less architectural pretensions than the Irish public asylums, no class of the insano should be permitted to receive less care and attention than the patients of these institutions receive at the present time.

Additions and alterations. Armach District.

ADDITIONS AND ALTERATIONS of an extensive character, and which are much needed, are now being made in several districts. Thus, at ARMAGH, it is proposed to erect an infirmary block to

accommodate about 70 patients, with additional day-rooms, and to re-arrange the stores. It is also proposed to acquire additional land by the purchase of a farm adjoining the asylum ground.

Galway and District.

At BALLINASLOE it is proposed to erect an infirmary block to contain 120 patients. In our opinion this institution has reached the limits to which, having regard to efficient super-vision and administration, it should be allowed to grow, and the Grand Juries of the two counties forming the combined district, Galway and Roscommon, should consider whether, in the interests of the insane poor, it would not be desirable to provide separate accommodation. The asylum is situated at almost the extreme northern point of Roscommon (which, long and rather narrow in configuration, extends 60 miles from north to south), and on the eastern boundary of Galway county. In our opinion the area of the existing district is too large, and much inconvenience results from having in many instances to bring patients such very long distances before they reach the asylum. It is equally certain that before any sanction to the enlargement of the present asylum at Ballinasloe should be granted, the amount of land attached to it should be largely increased.

Printed image digitized by the University of Southampton Library Digitisation Unit

BELFAST .- After long and careful consideration, the Grand Decree Jury of the County of Antrim, and the Corporation of Belfast, have decided to divide the district, and to build an asylum for Antrim and Antrim county, leaving the present asylum for the accommoda. Belfast Dision of the insane of the city of Belfast. This course was trict. argently required as-(1) the population of the city of Belfast has increased so rapidly that it now requires an asylum of its own; (2) the requirements of the insane population of the county of Antrim-perhaps the most prosperous and the wealthiest county in Ireland-could not be properly met by any extension of the sylum at Belfast, situated as it is in the south, and a long distance from the towns in the north and centre of the county; (3) no very ertensive addition can be made to the Belfast Asylum, as it is

dready surrounded by buildings, and great difficulty would be The Grand Jury of Antrim have therefore, through the Board of Control, purchased an estate, consisting of about 100 acres. mear the town of Antrim, admirably suited for the site of an sylum, and have directed their architect to prepare plans.

band in obtaining more land.

Carlow.-We are sorry to have to report that no progress Carlow and whatsoever has been made to carry out the very necessary Kildare Disimprovements and additions required at the district asylum at trict. Carlow-although they have now been under consideration for nore than a year. Unprovided with a sufficient water supply, with its drainage system defective and obsolete overcrowded. with insufficient accommodation and appliances for cooking and washing, with flagged cells in some parts, with wards meagrely furnished and devoid of all those comforts universally seen in modern public asylums, this institution must be looked on as inferior to all other public asylums in Ireland, and calls for the serious consideration of all responsible for its management. At the instance of the Board of Control plans to meet all requirements have been prepared by the local architect, but they have not as yet been considered by the Governors.

At CASTLEBAR extensive additions and alterations have been Mayo District. carried out. New wards, containing day-rooms and dormitories, have been erected; new sanitary blocks, containing baths and lavatories, have been built; and, in addition, a new system of sowerage, which was urgently required, has been laid down. Some of the old parts of the asylum would require renovation, and the cooking apparatus would appear inadequate to meet the demands of the institution.

The asylum, situated at CLONMEL, is much overcrowded, Tipe The Governors propose to afford additional female accommods-District. tion by a new wing, and to enlarge the dining-room. It is also proposed to erect a separate infirmary block for fifty females. At the TYRONE District Asylum, situate at Omagh, the Romangh Governors have acquired a very valuable addition to the farm, and Tyrnes by the purchase of about 90 acres of land. This will prove District, important adjunct in the treatment of the patients, rendering them happy and contented.

It is to be hoped that at an early date the Governors will take

into consideration the necessity of afforcing additional accommodiation for the insanc of the district, as the saymin is overcrowded. A difference of opinion has, for some time existed between the long three properties of the contract of the contract of the long three properties. In the first instance, the Governors having sent to the workhouse certain of this classe, when the long-flam, being of opinion that they had not suitable accomnearly them. A most unfortunate and unseemly disjute has the coursed, and an appeal has been made to the law courts to decide it.

The estimated accommodation of the RICHMOND ASYLUM is noble Loop, for 1,100 patients, whereas the resident population is nearly and Wickley 1,400. The overcrowding which prevails throughout the insti-District. tation is most apparent on the male side, where day rooms have to he converted into dormitories, so that these rooms which are overcrowded by day have to he utilized again at sight. Patients occupy some of the corridors for sleeping, eating. and walking-not alone is the overcrowding very great, but the various departments are quite inadequate to meet the requirements of the population. Only one kitchen exists-at the female house-too small even to meet the wants of that huilding, and from it food has to he transported to the male house, about a quarter of a mile away; the stores are quite insufficient to receive the goods sent into them, and are quite unsuited for an institution of such size; and the laundry in like manner is indequate.

DISTRICT ASTLUME.

This state of things is most unfortunate in an asylum containing such numbers of mass patients—specially is it so in the menopilita asylum of Iroland. We have pointed out that in desire as open, either to divide the deletted two, only two course are open, either to divide the deletted two, only the property of the pr

Land attached to Asylums,

sheat LAND ATRACHED TO PUBLIC ANYLINES—In Table V (pages "20-25), will be found the return instituting a comparison between the amount of land attached to Irish and Societa supertable would tend to prove that the advantages to be from affording out-door exercise and employment to the insate are not yet sufficiently understood and appreciated in Ireland.

In the district asylums of Scotland the average number of acres attached to the asylums is 149; in Ireland only 33, excluding amount under buildings and airing courts.

In some few districts the asylum is altested in such does precinity to a toru, and so surrounded by publiage, that it precinity to a toru, and so surrounded by by publiage, that it precisions of the sylum; but in other places and surpose to the sylum; but in other places and the sylum; but colorised, if the advantages to be gained that of the precision of the sylum; but in other places of the sylum; appreciated, in afforting the best means of ment, at the same time, adding a source of income to the arylam funds.

employment in trentment of branity.

Most of the insane in Ireland, who come from the lower ranks of society, have been accustomed to field or garden labour, and the great majority of them can be rendered tranquil and contented by employment of this nature, which exercising a peaceful and scothing influence, leads, in many instances, to the patients' recovery. Yet in many asylums the proportion of patients employed in agriculture is absurdly small, owing partly to the insufficient size of the farm, and partly to the numerical weakness of the staff of attendants, who should be sufficiently numerous to lead the untients' work, and at the same time to exercise the necessary supervision over them. We fear that not alone the governors of our asylums but oven in some few instances the resident medical superintendents, have not as yet realized the supreme importance of physical employment, and of allowing their patients plenty of elhow-room. It is this want of room and of proper employment which explains the not infrequent use of mechanical restraint still found in some of our public asylums; while in several the so-called refractory class are overcrowded in dreary and cheerless airing-vards, which the experience of other countries proves to he not alone unnecessary but injurious, and which, in our opinion, are much more likely to engender than to cure insanity.

### STATE CRIMINAL ASYLUM.

CRIMINAL ASYLUM,

Your Excellency having bed under consideration certain matlers in connexion with the management of the Criminal Asylum at Dundrum, was pleased to appoint a Departmental Committee to inquire into

commodation.

General management.
 Departmental management and expenditure.

(4.) Reduction of population.

On the fourth part of this inquiry the report has been already similted, and your Excellency has been pleased to order the smoval of a number of cases no longer requiring detention in

hat institution to their homes, or to their district asylums. As to the remaining subjects of inquiry, the committee have not yet had time to terminate their investigations. In conneties with this institution we therefore merely submit the report of the medical superintendent and the statistical returns for the year. (Appendix B.)

#### PRIVATE ASYLUMS.

PRIVATE ASTLUME.

The licensed houses and charitable institutions in Ireland, ASTLUBE.
subject to statutory visitation, are twenty-two in number.
A list of these houses, with the number of patients for which Scattston.
such is licensed (where a licence is necessary), with the statistics

seah is heensed (where a heence is necessary), with the statistics of admissions, deaths, and discharges, will be found in Tables II. and III. (Appendix C). On December 31st, 1890, the total number of the insane in

On Depender 328, 1239, the total number of the masse in these establishments was 621 (255 males and 368 females). Comparing this with the return of December 31st, 1889, it would appear that a decrease of ten patients has taken place during the year.

Table 1 (Appendix C), however, shows that the numbers in these institutions in Ireland, during the past ten years, have not varied in any important degree.

The number of private patients in licensed houses in Ireland bars a very small proportion to the number of the registered issue in district asylums in comparison with the relative num-

hers in other countries.

In last year's report we felt bound to state that "in our Condition, which the condition of these houses, with some few exceptions.

spins the condition of these houses, with same few exceptions, is not entirely astachedory. Many contain but two or three paints, whose contributions towards their support will hardly saited due provision being made for their proper care." We exact, too strongly reiterate this opinion. Where only one or patients are received at very low rates of board, the temptains to exonomise in every way in their maintenance must be try great indeed, and it is impossible to expect that in such case the comforts and even inxuries with which we find this size of the insure surrounded in other countries can be supplied.

During the year we have been obliged to recommend the Lord Cancellor, under sec. 13 of 5 and 6 Vict., cap. 123, to revoke PHIVATE ASTLUMS.

the licence in the case of one of these houses. Others sail remain where, though we are confident every desire critics on the part of the proprietors to do all in their power for the insane immakes, the yearly income is not sufficient to prevest fears that undue economy has to be exercised in order that a reasonable profit may be derived.

Necessity for Mobile Class Asylums, We have therefore to call attention to the great necessity as titing into poor country as if-easiling a new source stating into great country as if-easiling relation of a consumerabiling public funds to be provided for the establishment of accommodation for the insane paying low rates of board, in which no poemisey interest would accrue to any private intrividual, and we would provide the provident of the control of the control of the separate words for the reception of this class of the insane should be introduced. At present a number of pointers contributing towards their maintenance are to be found in the several district towards their maintenance are to be found in the several district and the country of the country in the country in the country and the country of the country of the country of the country and the country of the country of the country of the country to the country of the co

contributions, may be considered as charitable institutions. These have been exempted from licence by the 49th section of 5 and

Charitable institutions.

6 Vic., cap. 123, as they are not kept for profit by any private individual.

The asylums which are thus exempted are :--

St. Patrick's (Swift's) Hospital, St. Vincent's,

Bloomfield, and the

Stewart Institution.

Swift's Hospital.

The first of these must be considered of paramount interest to all Irishmen as the memorial of its illustrious founder, Dean Swift. It was evidently intended that its benefits should be fostered and extended for the good of the insane throughout Ireland who were unable through their limited means to obtain admission to private asylums, and it was endowed for that purpose. Unfortunately the wishes of the founder cannot be said to have been successfully carried out, for, although it must be always looked on as an imperishable monument of this most celebrated Irishman, its resources do not appear to have been developed for the best interests of the insane. Situated as it is in the very oldest part of Dublin and surrounded by buildings, it is impossible to afford the light, air, and pleasant surroundings so important in the treatment of insanity. The building at the present date continues in the same state as at its first opening, the same massive walls, the same small windows affording deficient light and air, the same dark passages with cells on each side, giving it the appearance more of a prison than of a modern asylum,

of a modern asylum.

To contrast the Royal asylums of Soutland, establishments originally on the same financial besis, would point to what might have been done to have carried out more effectually the will of the illustrious founder. We trust that the scheme propounded

in Dean Swift's testament will at an early date form the subject PRIVATE of an inquiry, so as to determine how far the usefulness of an ASYLUNS. institution possessing such large resources can be extended.

St. Vincent's Hospital was founded in 1857 by the bequest St. Vincent's. of Mrs. E. Magan, of Dublin. She left her property in the hands of distant relatione, merely stating that she wished it to be

utilised for some charitable purpose. Eventually they decided to apply the property for the benefit of persons mentally affected belonging to the middle classes. This institution is in charge of the Nuns of the Order of St. Vincent, and is for females only.

Bloomfield, originally founded by the Society of Friends, and Bloomfield. at one time set apart for members of that persuasion, now affords

accommodation to patients of all creeds and of both sexes. Palmerston House, or the Stewart Institution, founded ori-Stewart ginally by the late Dr. Stewart, affords accommodation princi-

pally for imbecile children, who are admitted by the votes of the subscribers to the funds of the institution, and afterwards receive a free education. A certain number of wards are also set apart fir private patients of both sexes. Here the few remaining inmates (see Table IV., page 29) of the Richmond cells were pland after their removal from that historical building and here they have been supported at the expense of the State-hence

known as "Government patients"-for many years past, The institutions last referred to take the place to some extent Regulations of hospitals for the insane in England, and partially supply a necessary. want which is much felt in Ireland; but they do not go far mough. Their endowments are not euflicient to afford accom-

notation for the numbers of the insene in Ireland who could contribute to their maintenance at a low rate. We are further of opinion that in any fresh legislation all houses for the reextion of the insane not kept for profit should be under similar regulations to those introduced by the Lunacy Act of 1890 for the administration of hospitals for the insane in England.

In last year's Report we felt it our duty to refer to the manner Books and in which the provisions of the Act (5 & 6 Vic., cap. 123), with registers. reference to private asylums in Ireland, are carried out, as regards he keeping of the various books and registers, and we have since musd a circular to the proprietors drawing attention to the requirements of the Act.

We may here state that many of the provisions of the Irish Private Lunatic Asylums Act are obsolete, and that much nere stringent regulations for the protection of this class of the neanc are required.

IDIOT AND IMPECIAL CHILDREN .- One of the greatest require. Necessity of sents in connection with lunacy in Ireland is the establishment impedies of a National Institution for the training and education of idiots and imbeciles, such as are the Larbert and Baldovin Institutione is Scotland, and the Royal Albert and Earlswood Asylums in lagland. We may estimate roughly that there are not less than \$000 idiots and imbeciles in Ireland, of whom probably 500 are inder fifteen years of age, and at least half of these would be aprovable, and derive benefit from the special training in idiot

schools, but apart altogether from improvement by training (ar pointed out in the case of Southand in one of the early South, he-ports, there is a great want in Ireisand of anestablishment asparially adapted for the reception of young kitots, where they would be removed from the neglect and cruel usage they so frequently experience at home, or from the contaminating influence of association with the adult lunation in asylums, or the paper immates of worthchoses.

The existing lunacy laws were not made for imbeciles, and we find in Ireland no less than 418 of this unhappy class occupying in district asylums accommodation properly intended for different forms of insanity, mimicking the shameless indecencies which are brought before their eyes, their moral degradation, completing their mental deficiency, while no less than 1,888 are scattered over the workhouses, where the provision made for them is often inadequate, where their very presence exercises a painful and demoralizing influence on the other inmates, and where in some cases (as pointed ont in our reports on particular institutions) they live in mechanical restraint to prevent their mischievous and destructive habits. The great majority however remain as hopeless wanderers, exposed to want and suffering, residing in homes where they can only in rare instances obtain the treatment suitable to their condition, while often they are grossly neglected. A case recently came to our knowledge where a poor woman, residing in one of the thoroughfares of Dublin, and occupied at work during the day, having an imbecile child and no means of caring him, has been obliged to chain him to her bedstead while she is absent at her daily work.

So long ago as 1851 the Census Commissioners addressed the

Irish Government in these terms :-

"We respectfully suggest to Your Excellency the propriety of things some steps towards the deducation and moral improvement of lists and imbedies, a subject which as present engages the attention of the philanthorphe both in England and on the Continues, where several philanthorphe both in England and on the Continues, where several philanthorphe both in England and on the Continues, where several by the States, for the purpose have been created, and are several by the States for the purpose have been created and the several continues of the class to a certain amount of classical has been demonstrated."

A generation has passed away since then (we are quoting the works of a most philanthropic lithman, the late Lord Olagan), and the great work of charrity which was urged by the Commissioners has gone on associatiful partial, so that similarities have long existed in Edgium and elsewhere, as well as in Soutland and Kagland, redoming unbappy eliditen from darkness and misery, and restoring them in numbers to compartive intelligence, and the power of at least assisting by their labours in the business of life, but Ireland has had almost so have in this Bappy progress.

It is true that section 4 of 41 & 42 Vic, cap. 60, enables the guardians of any union to provide, at a cost to the rates of some more than 5s per week, for the reception of parager idiots in suitable institutions, but, with the exception of Dr. Stewarts establishment near Lucan, in which a few innecled are maintained by private charity, no such institutions have ever axisted in this country.

The accommodation required for this class, and the costly IMPROCESS. educational appliances which are considered necessary, would entail such a large expenditure that, in a country like Ireland. where the means of the upper classes have been so materially crippled, it is hopeless to expect private charity to supply the want. Under such circumstances we consider that the urgency of the case justifies us in expressing a hope that Government assistance may be granted towards the establishment of such institutions. In Scotland the Government capitation grant is allowed for idiots and imbeciles in training schools. In Ireland a sum of money sither from the remaining Church surplus, from the new grant for primary education, or other source, might, we think, with alvantage, be made towards the establishment of a National Training School for Idiots and Imbeciles, and after the establishment of such an institution the Government capitation grant should be given to the children, not as paupers, but as imbeciles, under proper medical certificates, whether the parents are paupers er above that class, as was recently recommended by the Royal Commission, presided over by Lord Egerton of Tatton.

Not alone did the preamble to the Irish Church Act declare Cleim of that the released funds should be appropriated mainly to the limites on relief of unavoidable calamity or suffering, but Mr. Gladstone, in Funds. his introductory speech, discriminating between funatics and idiots, estimated that the provision in aid of the former would amount to £185,000 a year, while the provision for idiots might test £20,000 annually.\* Many charitable, educational, and industrial objects have obtained assistance from the large sums of

\*Hauserd: Vol. exciv., third series. Extract from Mr. Gladstone's speech in

Committee on Established Church (Ireland) Motion, March 1, 1869. Premble of the Bill declares " and it is further expedient that the said property, or in proceeds thereof, should be appropriated mainly to the relief of unavoidable calamity set defiring, yet so as not to cancel or impair the obligations now attached to property that the Acts for the relief of the poor."

"It is the latter part of the passage which defines the application of the money. "His the latter part of the passage which defines the application of the money. There is, din avery construct, as we not all aware, a region of what and safficting lying between the independent part of the community on the one hand, and the purely passages on the other. For this region of worth and efferings it a very hord to make objective to the other. For this region of worth and efferings it a very hord to make the provision by the poor law, which is almost introduce to be niggard in its provision by the poor law, which is almost introduced to be niggard in its granule, because, if it were made liberal said large the risk would then be run of doing. e greatest possible injury to the independent labourer struggling to maintain himself. he wants that I speak of in Ireland are at this moment partly unsupplied, and they are sardy supplied in the rough, a medium which we think defective, and which might be pearly improved. The medium I speak of is the county cess, a heavy and increasing tax - a tax not divided like the Poor Law between the owner and the occupier, but paid wholly by the eccupier, and a tax not limited like the Poor Law to occupations shove £4 is value, but going down to the most miserable but or cabin. The holders of these most whiched tenements are now required in Ireland, and required increasingly from year to to pay not that which is paid by the wealthier portion of the occupants, who eco-Two is pay not that which is paid by the wealther protes of the occapant, was occa-bined to the poor two, but to pay for that close of wint and anthring which could be used, and which, in every great community, ought to the parties of the table, on the parties of the parties of the payment of the payment of the ten that the payment of the payment of the payment of population. Now, which we then the payment of the payment of the payment of population. Now, the payment of the payment of the payment of the payment of population. Now, the payment of the theory of the payment of the payme

To means evertaken the whole country, the east on this head is already from £120,000 a £140,000 a year, and will ultimately rise to £200,000. This expenditure is defrayed the county cass, collected from the class of occupiers I have described." It should however be remembered, that those words wern spoken before the Land Act # 1870 was passed, which pisced the incidence of the county cess on the same footing a the poor rate in the case of new tenancies.

money set free by the disendowment of the Irish Church, but, as it seems to us, by the very irouy of fate, not one shilling of this money has been appropriated to the objects thus specifically indicated as affording the most just and proper application of

these funds.

The question is a large one; the number of lunstin increase, yearly, while the cost of providing suitable accommodation for them becomes to the tax-payers also an even-increasing broken which they can illafford to bear. Whether, cronch tyes are cittled to further relief of local taxation for the support of their hundle is a question for Government to decide. To us, at least, it seems clear that the time has come when it is most desirable that, if possible, some such assistance should be afforded from Impried sources, whether by grant towards necessary buildings, or by reducing the interest on Lonso contracted for this purpose.

The number of limatics and littles to be provided for is, as we have shown, out of all proportion to the population of the country, and this excess is due not alone to the large emigration which has taken place, but, as it seems to us, to some extent at least, by the operation of these causes, economic or other, which have led to the impoversiment of such a large portion of the population

of Ireland.

Legislation.

LEONSALTON—In last year's Report we stated that it would be our duty to lay before Your Excollency said measures as would seem to us from time to time most activable for the care and control or certain classes of the innean in Flenals. Since these a Committee, appointed by Your Excellency to estable supposition of Inneap administration in this committee, and the control of the c

It therefore only romains for us to my how heartily we agree with the recommendations made in this report. The neggetion that the existing Irish statutes dealing with the care of the inner should be repeated by the introduction of an assuming with the care of the inner the control of the control of the control of the inner the control of the control

The English Lunacy Acts, which were at all times in advance of the existing law dealing with the insane in Ireland, here been amended and consolidated by the Acts of 1839 and 1890.

The Committee have shown that in dealing with Ireland this would not be sufficient, and in our opinion the course which would best meet the requirements of the case and would at the same time be the simplest and the most satisfactory, would be the same time be the simplest and the most satisfactory, would be sufficiently as the same in Ireland, and introducing provisions for business administration in accordance with the recommendation of the Commission. The Committee have recommended as an essential feature of fresh lumory legislation the creation of a temp Innavey Board for Fresh lumo, put of the continuous and the same and the same

The existence of such a Board in England and Scotland, enjoying the confidence of the public, has done much to create pulse sympathy with the condition of the insane, and we believe that the formation of a central board in this country would awaken public inherent to the importance of the subject, and lend to a general recognition of what is just sind humane.

The Commission has further recommended that any new bauey legislation shall deal with the insane in workhouses and wasdering at large, so as to place all lunatics unrecognised by the existing law under the care of the State. In order to grovide suitable ecommodation for these two classes, they have recommended the arcetion of provineid or succusal sayfams by any district or embination of districts; that power should be given to local boards to acquire unoccupied workhouses and to obtain licences for certain wards in unoccupied workhouses are the use of the incurable insane; and these provision should be made for the care of certain cases in private dwellings, with the sinction of the general board.

Furthermore, they have advised that more stringent regulations should be introduced for the protection of the insane in private saylams, and they have recommended that local boards should be empowered to make provision for those who are only able to entirtude small muss towards their maintenance. In England and Sociland hospitals for the respection of lunstain of the middle Socialand hospitals for the reception of lunstain of the middle makes the string of the stringent string of the str

We are of opinion that the publication of this most valuable report of Sir Arthur Mitchell's Committee will do much to detecte public opinion on the momentous question of lunacy spikation and administration; and, having regard to the importance of the subject, we vanture to suggest that the Government should circulate the report widely among the local subchticks throughout the country.

### WOBERGUSES

#### WORKHOUSES.

The number of pauper lunatics and imbediles resident in watch houses throughout Ireland, was on December 31st, 1809, 3561 (of these, 1,506 were rades, and 2,505 females), or nearly one-shift of the total number under care. Table 1 (page 37) shows the changes which have taken place amongst the imane in these stabilishments for the past ten years, from which it would appear that during that time the numbers have increased by 448.

Up to the present we have no returns showing the admissions, discharges, and deaths among the insane in these institutions.

Under the existing law lunsties in workhouses are not neednised goal lunstites, but only as puspers. It cannot therefore he wondered at that the provision made for their care is not sufficial for their requirements. Heaving sought refuge in the various workhouses throughout Ireland in consequence of the inadequate coordinated against the wish and almost in opposition to the will of the control is therefore every to understand that the steps taken to provide for their comforts and treatment by the local authorities are not in all cases satisfactory.

In Ireland statutory provision was made for the establishment of pupper lumaite saylines many years before the passing of the first Irish Poor Rollief Act, and the Commissionen who last ble a Comtation of Irish Poor Law administration deliberably decided to the control of the Commissionen who last be a control of the Commissioners to Lord Elito, dated 29 th September, 1812 v.

"Our attention has been frequently drawn to this quastion, the man provided for the economodation of lunatic persons being notoionally insufficient, and a strong desire, in consequence, existing, for transferring to the workhouses such cases of confirmed lunaey as are beyond the reach of medical treatment,

"To explications of this kind the Commissioners have invariable answered, that the Lifs Poer Reliaf Act made no porision for the reliaf of insane and insatio persons, as such, but required that risk explicit the result of the

But even to the extent stated in this letter the Select Committee Werkeverse, to the House of Lords reported, as far beek as 1843, union work-houses are inapplicable to cases of insanity.

In some of the more important workhouses, such as Belfast, conditions fock, and the South Dabilu Union, special provision, owing to sense is the increasing number of the insease, has been made for their care. Westbessen, by appointing paid attendants to look after the lumatic and insecale wards, and in some of these cases where active and in-telligent persons have been employed, the condition of the

inhedie wards, and in some of these cases where active and intelligent persons have been employed, the condition of the insates is not entirely unsatisfactory. But even in these cases the appliances for the care of the insane are insadequate; either there is overcrowding or there is not sufficient land for exercise and employment.

In nearly all the workhouses there is an absence of proper sepervision, the only attendance provided being that of paquer insists, often grossly ignorant and cereless, to whom are entested, in many cases, the instruments of mechanical restraint, which they often apply because the patient is troublescore raisity, or because the imperfect nature of the accommodation will not durint of a better mode of treatment.

The condition of the patients as regards personal comfort and cleanliness is, a basi in the case of some workhouses, far from assistancy; in these the insane inmates are found without compution or amment—living cating, and sleeping, in the significance of the computer of the computer of the significance of the contraction of the Local Government inspectors, the cold and dark "Life calls" have been got rid of in nose parts of Ireland, but there are still workhouses, aspecially in the northern unions, where cell has russed as commodation for the insane, and we cannot express too strongly our opinion of the unstallability of each places for the recopition of lonadies.

Sir Arthur Mitchell, Mr. R. A. Holmes, and Dr. MacCabe, state in their preliminary report on Lunacy Administration that the condition of lunatics in Irish workhouses is generally unsatisfactory, and often very bad—

"In some of the workhouses they may be fairly well circumstanced as after a state of the fair condition is unsatisfactory, and in many so very unsatisfactory that an earnest offer to improve it should be made without waiting for fresh legislation."

The Lead Government Roard of which Dr. MacCabe is himself adhinguished member; in thus fully alive to the defective accommodate and unsatisfactory treatment of the defective accommodate and the state of the state

WORKHOUSER SUggest for the consideration of the Local Government Board as a means of immediate improvement-

- I.—That in all cases paid officers should be made responsible for the care and treatment of lunatic inmates,
- II .- That mechanical restraint should never be used axcept by the recorded direction of the medical officer, in whose charge straight-waistcoats and other instruments of restraint should be kept.
- III.—That as far as possible separate day-room and dormitory accommodation should be provided.
- IV .- That every effort should be made to find employment for such insanc patients as are able to work. There is no better employment for men than spade labour, or than laundry work for women, and both of them might be
- provided in nearly all our workhouses. V.—That the cells above referred to should be disused.

Workhouses.

Under the 9th Section of 38 & 39 Vict., cap. 67, provision was Asylum books made for the transfer of certain classes of the insane from district asylums to workhouses, under special contracts, the lunatics continuing on the books of the asylum, and the Governors still receiving the Treasury grant towards their maintenance, whilst the Guardians became responsible for their care and maintenance in consideration of a certain payment. This divided responsibility would appear to us most unfortunate as regards the best interests of the insane. Both the Governors of the asylum and the Guardians of the workhouse naturally anxious to derive as much profit as possible from their contract, fail to take any real concern in the proper treatment and comforts of these insane inmates.

The Commissioners on Lunacy Administration, Ireland, recommend that in any fresh legislation vacant spaces in workhouses, wholly or partially unoccupied, should be utilized for the accommodation of certain classes of the insanc: but they recommend, in the first instance, that this accommodation should become entirely the property of the District Lunacy Board with the sanction of the General Board, and in the second, that these wards set apart for lunatics should be licensed by the General Board and should be left entirely to their eupervision. The Commissioners, however, add the provise that the conversion of these unoccupied workhouses into succursal asylums would generally be costly, and that it would be found to be cheaper and better to ouy land and erect new asylums.

When fresh legislation is introduced, it is to be hoped that a clause will be inserted making it a misdemeanour to retain any person of unsound mind in any workhouse which is not licensed, or to cruelly treat, or neglect a lunatic in any of these institutions.

SINGLE

PATISATS.

### SINGLE PATIENTS.

A return has been made to us through the courtesy of the Registrar in Lunacy of the patients in private dwellings under the charge of the Lord Chancellor. With the exception of this return we have as yet been unable, except in a few instances, to obtain reports of the condition of single patients, although under section 37 of 5 & 6 Vic., cap. 123, the guardians of all single patients are obliged to report to us on the condition of their wards once a year. We are, therefore, unable to submit a return of their number or to make any statement of their condition. We hope, however, by degrees to obtain accurate returns of all patients living alone in charge of guardians who derive profit from them.

So far as we are aware no pauper lunatics are kept in private Boarding-out

dwellings in Ireland for profit, nor is there any provision to meet system. the expense of boarding out the insane except as paupers in receipt of outdoor relief. We are of opinion that the provisions for this mode of disposing of the insane, known as the boarding-out system, and which has been for so many years in force in Scotland, and by which contributions are made, both from Imperial and local funds, for the maintenance of certain classes of the lunatic poor in private dwellings, should be extended to Ireland. Under this procedure certain of the insane not requiring the restraint of an asylum are placed as lodgers in the cottages of the inhabitants. These cottages are in the first instance sanctioned by the General Board, and are inspected by members of that Board. Contribution is made for the support of these lunatics at a fixed rate per week, of which the half is paid from the Imperial grant. The persons who act as guardians are generally in the position of small farmers or market gardeners, who are glad to receive a small addition to their income. Such a provision has been found to work well, affording certain insane persons who do not require asylum care the comfort of a home, and at the same time enabling them to be maintained at a lesser mst than had they remained in the asylum.

It must, however, be remembered,—First, That such a mode of disposing of the insane would only meet the requirements of a very small number. Secondly, That this system of providing for the insane in private dwellings would require considerable time for its development. It would require time to educate persons as guardians, and it would require more time to accustom the surrounding peasantry to the presence of the insane in their Furthermore, this system of boarding out the insane would always require careful supervision in order to prevent abuse; and in many instances suitable hosts would be found with difficulty, so great is the poverty existing in many parts of Ireland.

SINGLE PATIENTS.

But we have no doubt that such a method of dealing with the lunatic poor not requiring asylum accommodation might be carried out in certain districts, and, we are further of opinion, that provision should be made in any fresh thanky legislation to provide the machinery necessary to deal with this class.

We have the honour to be

Your Excellency's obedient Servants,

GEORGE PLUNKETT O'FARRELL

E. MAZIERE COURTENAY.

### REPORT for the YEAR ended 31st December, 1890.

### Central Asylum, Dundrum, 29th April, 1891

GENTLEMEN,—There is little to report on in regard of this asylum beyond the statistical tables for the year ended 31st December, 1890, and the financial tables for the year ended 31st March, 1891, which

and the manust takes for the year cause 31st march, 1891, which are already in your hands.

The health of the house still continues to maintain its former satisfactory standard, the number of deaths during the year having been called a light and the proportion of the standard of the number of deaths during the year having been called a light and the standard of th

only 5, all males, and all from natural causes. The average age at death was 64 years. The percentage of deaths on the daily average number of immates was 2.77, and on the total number resident 2.52. Two of the deaths were due to cancer; one to pitchisis. The pressure on our space has been severe during the veer, the

number of immates having at two or three periods reached as high as 184, while the daily average was 179.

The conduct of the staff has been satisfactory during the year. The two senior members, who were husband and wife, returned on pension, each having served over 40 years. The shoemaker also retired, after

16 years service, by reason of serious illness. The head attendant died after a distressing illness; and one attendant incurred dismissal for persistent and repeated negligence in the discharge of his duties.

The supplies sent in by the contractors during the year were of good

quality, with the exception of the broad, which was much below our usual standard, and incurred repeated rejection.

As regards the financial part of the tables, a saving has been effected

under the sub-heads of salaries and wages, clothing, escort, and incidental expenses; while an excess has been incurred under the sub-heads of victualling and medicines. A surplus, however, remains on the whole vote.

I enclose notes, as usual, on the cases admitted during the year.

I enclose notes, as usual, on the cases admitted during the year

I have the honour to be, Gentlemen,

Your obedient servant, ISAAC ASHE, M.D., R.M.S.

-----

The Inspectors of Lunatics, Dublin Castle.

#### NOTES ON CASES ADMITTED.

No. 810.—J. B. This was a case of readmission from Mountjoy Prison, to which he had been remitted as sane on 17th September, 1889. He was readmitted here on 2nd January, 1899, in a state of violent mantia, the condition of mental disturbance having begun about a week previous. Formerly here as No. 750.

mania, the condition or mental disturbance having begin about a week previous. Formerly here as No. 750. 811.—J. S. This was also a case of re-admission; former number, 741. After expiration of the sentence which he was then undergoing, he was

- renoved to Easin District. Applies, where is Aspute, 1885, he set far two bods, and then seconded in stanking his suaper, but are constituted and committed to Limerick Prison; there seems he was the Lith January, 1890. Transmitted to Limerick again on 5th Erbrarys for trial, and again admitted here, after trial, on 12th March, under sentence of confinement during pleasure. He has belaving underly here since of confinement during pleasure. He has belaving underly here since good, but moral chiracter very low. Health not good; frequently suffering from a hamorrhagic confilion of the prime good.
- 812.—P. K., sged 38. Admitted 21st January, 1890, from Kilmainham, his offence being an attempt to commit suicide. He has always associated himself with the party of disorder and turbulence here; but his intelligence at present appears perfect.
- 813.—J. B., agod 43. This was another case of re-admission from Mountipy Prison, to which he had been remitted in September, 1890. Having, however, been again certified as instance by the prinon authorities, he was re-admitted here on 29th January, 1890. He is a mischievous character, always exciting others to miscondach, but avoiding engaging in it hisself. His former camber was 751.
- 815.—J. R., agod 46. Admitted 29th March, 1890, from Down-patrick Gool, under sentence of 20 years' pean servicide for man-sinaghter. A native of Co. Wesford; a market-gardenet by trade. Mania of sungledon, beliering his food to have born poisoned, and something also done to his clothes; this stule had been observed to be coming on gradually for shout a month. This man has to been vibelest since his admission, but will not work, and answers freedy when spoken to. His condition appears to be passing into denentia.
- 817.—7. K., aged 21. A labourer, married. Admitted 6th May, 1809, from Monsting Prison, where he had been undergoing 5 years penal servincie for sessell and robbery. A native of Limential, and violent, aggressive manner and address. His mental distratures appears to have come on gradually during the 3 months previous to his admission here, first aboveing itself by relience and refuent to work, and afterwards in adversaly habits and delaulous of a comprisery against his life. Ho had been in the set. He and the set of the

- 318.—E. L., aged 8.3. A habitual criminal, with 50 convictions against him. Admitted 6th May, 1809, from Monantily, where he had been undergoing a sentence of 7 years' penal servited for larvery. He belongs to Baffett He labour under the most violent distuines of a compinery against him. He presented on admission symptoms of weak heart and atherona of the arteries, yet wisheld to work on the farm, de, and has done so without injury. He has proved to be quarrelease and menaching in language, and otherwise very bodly conducted.
- 810.—W. L., aged 26. A. mild, quiel-boking young man, said to belong to Gork, but his secent proclaims him an Ragithama. Admitted 17th May, 1890, from Monnijoy, where he had been undergeing a sentence of 5 years penal servicious for larcony. He labors under valent of well-of the second process of the second process of the second process of the second, be much to the second process of the seconds, be much to that of late it gives rise to suspicion of organic disease, but he will allow no examination to be made. It appears that he was formerly in Prestveliol Asylum.
- 820.—E. P., aged 27. A soldier, formerly in India, where he had been imprisoned for firing off his ride without cause. Afterwards considered to be insense, and sent home to Nedley Anylum, and thence, in February, 1896, to the South Dublin Dirato Workbross. Ho appears to had a superior of the sent of the sent of the sent to the sent of the sent to the sent of the sent to the sent of the s
- 331.—M. M.G., aged 59. A pensioner from the 16th Foot, with a way; good character from the carry, four good conduct bedges, and a pension of 1a, 14a. a day. Tried at Araugh Assizes in July, 1890, for shooting with intent; from diaman at the time of the offence, and assenced to be detained during pleasure. Admitted here 16th July, 1800; reported to be suffering from delasional mania, but the sulper thereof in an expectation of the foundation of the summary of the sulper thereof in an worked on the farm, but miscopountly cossed doing so through disasticfaction at the cost of his maintenance here being deducted from his possion, the balance only being paid to his daughter, who is in delicate health.
- 832.—M. F., agol 27. A laboure; tried in July, 1890, at Tulkanore, for asting fire to furne. Acquitted on the ground of inasnity, and ordered to be detained during pleasure. Admitted 18th July, 1890, with a medical note to the effect that his inasnity was doubtful, noting also, however, that his mental effection was probably herefulary, as his father was insans. He has been substant, sughther, and insertive naive functions and the state of the
  - 823.—W. T., aged 30. Admitted 19th July, 1890, from Mountjoy. Crime, murder; sentenced to death, afterwards commuted to penal

servitude for life. No statement as to the details of his crime was received with the prisoner, but the circumstances are well known, having created much sensation at the time. He shot a man who had been married to his sister, and who, after her decease, was about to marry again. The prisoner shot him while proceeding up the church aisle for this purpose, in presence of his intended bride and the wed-ding party. While undergoing his commuted sentence in Mountjoy, he is reported as of good conduct except on matters connected with religion. His insanity is beyond question of the religious type. For some time after his admission he was dangerous and sometimes violent, but latterly he is of better behaviour, and is engaged on farm work. He is very well educated and highly intelligent,

824 .- D. M'C., age not stated; he himself says he is 45. The information transmitted with him is of the most mesore character. His crime was murder, and it is known that it was his own child he killed, having lost his sleep watching the child at night while ill. Ho appears to have been under the delusion that the child was a changeling. He belongs to the Co. Donegal, and was tried in Londonderry, and found not guilty on the ground of his insanity. Since his admission he has on two occasions suffered from attacks of recurrent mania when he becomes noisy and violent, at other times he is well conducted.

825 .- W. H., aged 38. This prisoner was formerly in the Cork District Asylum, where he was admitted in July, 1889, and whence he escaped in October, 1880. He subsequently went to Scotland, and was tried at Ayr in September, 1881, for setting fire to corn stacks, but acquitted on the ground of insanity. He was transferred to Perth prison in October, 1881, and thence here on 30th Auguet, 1890, under warrant of the Home Secretary. He is reported as subject to periods of insane excitement, but he has not become excited since his admission here. He is however melancholic and hypochondriacal, and presents signs of threatening phthisis. His health has, however, improved under treatment since admission.

826 .- J. S., aged 30. Admitted 12th September, 1890, from Belfast prison, where he had been undergoing a sentence of 18 months imprisonment for wounding with a knife two members of the R.I.C., who were arresting him for breaking barrack windows. Stated to be suffering from religious mania, and to be a very healthy man. He seemed, however, on admission to be very much out of health, miserable, and underfed. Though placed on extra diet his health did not improve, and after some little time it occurred to me that he might be suffering from diabetes, as I was informed that he drank a good deal. On examination this proved to be the case, the ep.gr. being 1047, while an accurate determination showed 58:48 grains of sugar per ounce of water. This condition of his health being represented to the Lord Lieutenant, his sentence was commuted, and he was removed to Downpatrick District Asylum in Jamary, 1891.

827 .- W. L., aged 27. Admitted 30th September, 1890, from Cork prison, having been arrested on a warrant of the Sheriff of Co. Cork, for contempt of the Court of Chancery, and certified as having become insane while in prison. Stated to labour under dementia and delusions of persecution. A poor, feeble, demented creature. His centence having expired on the 5th December, he was removed to Cork Asylum.

828.-E. R., aged 26. Admitted 31st October, 1890, from Kilkenny prison, having been tried at Green-street, Dublin, for some misde, meanour not stated, and sentenced to 18 months hard labour. Stated to have delusions of persecution, and, on a particular occasion, to have become very violent-dashing his head against the floor of the cell, and howling. While here he seemed to be the subject of secondary dementia. His sentence expired on the 3rd January of this year, and he was thereupon transferred to the Richmond Asylum.

829.—C. O'B, aged 40. Admitted 1st December, 1890, from Mary-borough prison, having been tried at Wicklow for larveny, and sentenced to 5 years' P.S. Removed from Mountjoy to Maryborough in May, 1890, as a mental invalid, where, having been at first incoherent, violent, and slovenly, his case passed into acute mania, with which, or maniacal dementia, he has continued to be affected since his admission here. A noisy, jabbering patient, with intense suspicion against everyone, and some tendency towards violence.

830.-E. H., aged 35. Admitted 12th December, 1890, from Kilkenny prison, having been tried at Wicklow Assizes for the murder of his mother; found incapable of pleading, and ordered to be detained during pleasure. Reported as depressed in spirits, sullen, and morose, and refusing his food, believing it to be poisoned. On admission hisface had a very heavy, brutalised expression. He has, however, behaved quietly, and his mental condition is much improved since his admission.

831.—T. B. or J. M., aged 27. Admitted 12th December, 1890, from Wexford prison, having been indicted for murder at Wicklow Assizes, and found insane and incapable of pleading. He was formerly confined here, under his dies of J. M., for arson; he was, however, only 4 months in the house, and, if insane on admission, recovered very rapidly, and being certified sane by the visiting physician and myself, was removed accordingly to Kilmsinham. He seems to be same at present; he is, no doubt, a case of intense criminality, miscalled moral insanity, but he states that he knows very well the difference between right and wrong, and does not present any symptoms of intellectual aberration, as far as I am able to judge, He suffers from opacity of the cornea of the left eye, the result of chronic inflammation; the iris is adherent and the sight lost,

No females were admitted during the year.

ISAAC ASHE, M.D., R.M.S.

MEMORANDA OF INSPECTIONS.

# MEMORANDA OF INSPECTIONS.

AENAGH AEXLUM.

# ARMAGH DISTRICT LUNATIC ASYLUM.

Insperted on 12th June, 1890,

On our visit of impaction to the District Asylum at Armsgin on the III blum, 1890, we found 300 patients resident therein, of whom 180 were makes, and 155 females. Of these, six contributed towards their maintenance, paying from 210 to 622 per annum. Since the III January 1sets —33 men and 18 women, total 41, have been admitted; 16 men and 20 women, total 36, have been discharged; 9 men sad 4 women, total 18, have died.

The causes of the birthout deaths present no features calling for The causes of the birthout new features and the same of the same of the birthout new features and the same of the same of the birthout new features and the same of the same of the birthout new features and the same of the same of the birthout new features and the same of the birthout new features and the same of the same of the birthout new features and the same of

Mortality.

remark, all having been recorded as from natural causes.

No post-morten examination appears to have been made, and we

Mortuary.

understand that no detached building exists as a mortany for the comption of the dead and for the excussionation of the body after deal. The importance of such a building must be evident on the ground—if of rathic health, it he surroad of the dead from the same building will be the surroad of the dead of the surroad of the surroad of the surroad of the contract of the contract of the surroad o

proposition wherein to make post-movem examinations, and low as convenience of the jury in the event of a Coroner's inquest.

We would therefore suggest the advisability of erecting a mitable building along the boundary wall of the institution so as to allow of the body being removed without admitting the funeral cortage into the

Condition of patients.

Asylum grounds.

of the care and stiention bestowed on the patients we can speak in
the highest terms; all appeared clean and well clad, and as happy and
contented as their mental condition would allow.

Corridors, &a.

ta. The corridors, day-rooms, and dormitories presented an appearant of nestness, order, and comfort which deserves the highest praise. The corridors are neatly painted and decorated, adorned with pictures and flowers, and becomingly furnished.

Bedding.

The doministies are also neatly painted, and possess good means of natural variation. In some of them from bodiesads, with wire mattresses, such as are now exclusively used in the most modern asylmishave been supplied, and we trust the Governors will see the wisdom of the contract of the contract of the contract of the contract of the similar bodies maintain partiquated bodiesads in their sethikismen's similar bodies maintain antiquated bodiesads in their sethikismen's consists of—

> Quilt; 1 sheet;

2 single blankets, or 3 in winter.

We cannot understand why the insane in this part of the country bould be allowed only one abevet. Their habits cannot differ or such materially from the customs of the rost of Ireland as to necessitate any departure from the usual supply. The only domnitory to which we could object was a small room, with eight beds in the basement, with a stone floor, and without any means of artificial hosting. This room is set apart entirely for patients of dirty and degraded habits. It should ARRAGH be remembered, bowever, that the insens of this class generally suffer ASYLUM. from advanced brain disease, and would, therefore, seem to call for more careful attention than those less grievously afflicted.

The asylum has undergone within the last few years very extensive Improvements. ablitions and improvements, which appear to have been carried out with due regard to modern ideas of asylum construction, and for the better treatment and increased comfort of the insone. Recently the Governors have erected a beating apparatus by bot water pipes circulating throughout the dormitories and single rooms, thus supplying one

great desideratum in the treatment of insanity—an equable temperature. Some repairs and alterations yet remain to be carried out. The floors of some of the day-rooms and single rooms are worn ont, and evidence of the presence of rats are to be seen, so that many of these floors will require to be taken up and laid down afresh. The kitchen does not appear to be sufficiently large for the requirements of the institution. The steam boiler, range, and cooking appropriate should be moved into the centre of the room, and an additional steam boiler is required for cooking potatoes. The meat store merely consists of an underground room, damp and deficient in ventilation, which, as is well known, is almost more important than a low temperature in keeping meat. An attendants' dining and sitting room would add much to the comfort of these officials. Nothing tends more to the good management of an asylum than to provide suitable rooms for the accommodation

and recreation of the staff. The dietary consists of a stirabout and new milk breakfast for the Dietary. men, while the women get tea and bread for that meal. Both sexes get bread and new milk for supper. The dinner is composed of soup and bread on three days, Irish stew and bread on three other days; while on the remaining day (Friday) coffee and bread is given. Soup is not a popular food with the great majority of our people, and we would suggest to the Governors that they should substitute becon (4 oz.) with cubbage for the soup dinner on at least one day in the week. Bacon has already been successfully introduced into the distary of some Irish asylums, and bas been found not to be costly, and to agree with the patients, as well as being much reliabed by them. We saw all the patients at dinner in their hall. The meal was well served, with due regard to neatness, cleanliness, and comfort. The table-cloths were clean, and all the table requirements necessary for the serving of the food were provided. The greatest order, quiotude, and decorum prevailed. The dinner consisted of Irish stew, which appeared to be

greatly relished. We were informed that great difficulties exist in furnishing the Cookery extras, such as beef tea, for the use of the sick, and that they generally have to be provided out of the Resident Medical Superintendent's kitchen. It might be wall, therefore, for the Governors to consider whether the time has not now arrived for the present cook to retire on the superannuation which we understand she has carned by ber long period of service, and to obtain the services of a more active woman in

her place. The attendants are obliged to dine in the same hall as the patients, owing to the want of a separate room for the staff. This causes a certain amount of delay in serving the patients' meals; and more confort would be provided for the attendants if they had a room of their own. Ample space, however, axists in the dining ball. The stores did not appear to be kept with the same regard to neatness which prevailed in the other departments of the institution.

# 114 Appendix to Fortieth Report on District, Criminal, [App.F.

ARWAGE ASTLUM. Quality of tood.

Exercise

The meat which we inspected appeared inferior in quality and tainted, but the latter may be partly due to the bad way in which it is kept. We think, however, that in an institution of this size the Governor should insist that the contractors should supply all meat in sides, thus preventing inferior pieces of meat being smuggled in. Furthermore we would suggest that when providing a proper meat store, the Governors might take into consideration the advisability of erecting a slaughter-house, and introducing the system of having the most slaughtered on the premises. By this means alone can they insure that the meat designated in the contract is supplied, that thoroughly whole some food is secured, and that the officials are relieved of the responsibility and annoyance involved in disputes with contractors.

The airing-courts in the centre of the building present a dreary sail prison-like appearance, and their use should, as far as possible, be done

The walls and railings might be taken down so as to remove the many useless partitions which now exist, and the ground planted with a few shrubs and plants, so as to give a more cheaful appearance from the windows of the building. Every effort should, at the same time, be made to obtain more extended exercise for both males and females by providing a walk for them round the grounds, and by sending those whose mental and physical condition will admit for extended walks in the country.

Laundry.

The laundry, which contained a large amount of machinery worked by steam, is barely capable of affording sufficient accommodation to allow of much work being done by hand. Although steam is a very great advantage in getting through the heavy work of an institution such as this, we think that it should not supersede in any way the employment of the female patients, as we look on washing in a laundry as one of the very best means of treatment for insane women. We think that an additional shed might be erected which might be used exclusively for hand-washing-where a party of wemen might be sent every day under the charge of a nurse. At present only fourteen females and one man are employed in the laundry under the charge of a single laundress.

The staff on the male side consists of a head-attendant, ten attendants, one night-attendant, one gardener, one engineer and plumber, one

nurse, one cook, one laundress, and one hall-maid. The Governors have resolved to make substantial increases in the salaries of their officials, and until an Order in Council can be obtained for so doing the post of head-attendant has been left vacant in the hope that the higher salary would attract a superior class of candidates for the office. It is to be hoped that no unnecessary delay will occur in obtaining this order. We would suggest, however, that sanction should also be obtained for the employment of such artizans as are generally found on the staff of public asylums: a carpenter, painter, tailor, shoemaker, and upholsterer. By this means the work of the institution would be done better and cheaper than by extraneous labour; and as it would be the interest of these men to obtain as much assistance as possible, far greater scope would be provided for the employment of the male

steam-boiler attendant, and one gate-keeper. On the female side the authorized staff is composed of a head-nurse, ten nurses, one night

patients. Employment. The table of employment annexed shows that about seventy-five men

are employed at different work ; but we trust that steps will be taken to increase the number of farm labourers and artisans, as it would appear that the greater number (thirty) are engaged "cleaning the house," which cannot occupy their whole time.

The books and registers were examined by us, and appear carefully kept, except the Medical Journal, the existence of which appears to have been unknown. We have pointed out that the 8th and 9th Vic., Books and cap. 107, section 25, makes obligatory that this book be regularly kept Registers,

up for the future. From the Chaplain's books we find that 70 men and 49 women Divine Service. attended Mass on the Sunday previous to our inspection; 46 men and

41 women were present at the Episcopalian worship; and the same number are recorded as attending the Presbyterian worship, In concluding our report we feel bound to record our opinion of the high state of efficiency to which we consider the Armagb District Asylum has been raised as an bospital for the treatment of insanity. due to the enlightened views of the requirements of the insane taken by the Board of Governors, and to the energy, intelligence, and interest in his work displayed by Dr. Graham. We can only hope that the same progress will continue to be made in the management of the

## BELFAST DISTRICT LUNATIC ASYLUM.

BELFASE ARTLUM. 1890.

On our visit to this Asylum on the 9th August, we found 342 males Inspected on and 221 females resident in the Institution, while fifty men and fifty 9th August, women are located in Ballymens Workhouse under a contract with the guardians of that Union for their maintenance, The chargesbility of the whole number is as follows :-

To the County of Antrim, 191 males and 123 females = 314. To the City of Belfast, 194 males and 144 females=338. To the Town of Carrickfergus, 7 males and 4 females = 11.

Of these, twelve males and nine females contribute towards their maintenance.

# 116 Appendix to Fortieth Report on District, Oriminal, [App. F.

BELFAST ASYLUN. Overerowding.

It is needless for us to refer to the overcrowded state of the Institution which makes itself apparent in every department, but more especially in the male wards where the day-room accommodation is only sufficient for 137 immates. In some parts of the female side the accommodation would appear equally deficient, especially in the wards for acute cases. This is a matter well known to the Governors, who for a long time have had the question of providing the required accommodation constantly under their consideration. We understand that the Grand July of the County Antrim have decided to erect an asylum for that county, and we trust that no obstacle will arise to prevent this proposal being carried into offect, as at present Antrim, one of the most wealthy counties in Ireland, is practically without an hospital for the treatment of its insene poor, this institution being barely sufficient to meet the requirements of the City of Belfast. In our opinion the site to be obtained for the new asylum should afford an adequate amount of land for the requirements of the County Asylum (not less than 100 acres), and should at the first provide accommodation for the actual number of patients chargeable to the county, viz. :- about 400, and should allow for a small annual increase. We are aware that it is proposed to introduce various schemes, workhouse wards, boarding out, &c., by which the incurable insang may be removed from the more costly maintenance of an asylum, but it must be remembered that all these schemes take time to organise, and would not minimise the number of insane for

Corridors, &c.

by surrounding buildings, which gives them a cheerless and depressing effect. They also require a better supply of furniture, and to be rendered more comfortable and homolike in appearance. On this side of the house (the male) the single rooms, dormitories, and corridors are heated by hot water pines at high pressure, a system which is said to work well, while the lower corridor of single rooms is warmed by fourinch pipes at low pressure. On the female side this latter system exists in the lower corridor, but the principal day rooms, corridors, and single rooms upstairs are without any artificial means of warmth. We trust that before winter sets in steps will be taken to provide some system of artificial heating throughout the house, as the insane suffer much from a low temperature, and in many cases expose themselves uncovered to

clean and well kept. On the male eide the day rooms are darkened

whom accommodation is required until many years are past. Several of the corridors on the female side are bright and cheerful

Artificial. hording.

Bedžing.

more important in their treatment than properly heated rooms. The bedding consists of :-

A quilt :

Two pair of blankets in winter : One pair of sheets : One hair mattress, or a straw tick ; One bolster or pillow, with cover.

all the rigour of the coldest winter nights. Nothing therefore can be

The linen is changed once a fortnight on the female side, and every third week on the male side. This would not eeem to be sufficiently often to meet the requirements of the insane, as both sheets and pillow-

covers might have been cleaner.

The female patients were in their day-rooms at the time of our visit. Employment A large number were industriously employed at sewing and knitting and smuseand apparently bright and happy. The men were in their yards waiting ments. for their dinner. These yards appeared uninteresting and depressing in the extreme. That used by the more troublesome patients is surrounded by high buildings, and has nothing in it of interest to look at, or anything to occupy the attention except a pump. We think that steps should be taken to do away with these yards, as far as possible, for the use of the issanc, and that some motus of employment should be movided for those who are unable to work on the farm, by execting a

provided for stock who are masses to work off the first, by creening a few sheds as workshops, where they could pick hair or out wood. We found three patients under restraint—two men by glores, and Restraint

one woman (an acute case just received) by a strait-mark garden and Respansibling takes place once a week, and the supply of baths is con-Bathssidered almost sufficient, but no general bathroom exists, as is generally the case in Asylums. We saw several boxed shower baths lying open.

It is generally the rule in Asylums that such shower haths should be kept locked, lest they be used without a medical order.

The night nursing is performed by one attendant on the male side, and Niest one name on the founds offer. It common the supposed this such a stuff surface, it sufficient to affect adequate over end protection to such a large number in sufficient to affect adequate over end protection to such a large number of the innurse, or clean sulp revision such fifth on the protection of the innurse of the surface and the surface and the surface of the insure.

We saw the patients at dinner in their hall. The meal was served Distary.
in electro-plated bowls with tin spoons. No knives, forks, plates, or

delf bowis were provided.

The dictary consists of stiraltout and mixed mill for breachfast; somy potatoes, and heread for dinner, with six couses of must; bread and milk for supper. We would suggest that some variation should be made in the articles of food for dinner, by giving at times cobbage and laxen, or mutton instead of beef, as nothing is so important for health are constant change in dictary.

The deficiency of accommodation in the main building must of Lumday and necessity manifest itself in every part of the Asylum, and is especially Scores. Separates in the boundary and stores. These departments would appear quite unequal to the requirements of so large an establishment. Dr.

Marrich points out that their alteration and unlargement might be effected at small cost by removing the Changle from fig present pointing, and covering over the yeard in the race. The stores included then be exceed at the contract of the

We would further suggest for the consideration of the Board of Deached Governors the advantability of restricting a debaded hospital for the treats hospital, ment of the side, further, and acute cases, so that such perfects should be beyond the side of the side of the side of the Modiel of Diesers, and sulpy all they made the special observation of the Modiel of Diesers, and sulpy all they made the special observation of the Modiel of Diesers, and sulpy all Governors will see for the sulptime the importance of each a building without reference to the question of increased accommodation.

The Government Auditor has reported to us that he has been obliged Amén. to operatione his audit owing to the negligence of the clerk and storre-keeper in not having their books made up. This will entail a serious

# 118 Appendix to Fortieth Report on District, Oriminal, [APP. F.

BELFAST ASYLUK.

loss on the Asylum owing to the delay in the payment of the Government Grant, and the cause is not creditable to an Institution situated in such a commercial area. So far as the examination of the books with which we have immediate concern would show, it was apparent that proper attention was not given to the clerical work of the Asylum. The medical diet was not written up; no return was to be found of the eggs and butter distributed to the patients. From our examination of the Chaplains' books it would appear that on Divine Service.

the Sunday previous to our inspection ;-45 men and 29 women attended the Service of the Church of

England : 57 men and 48 women attended the Presbyterian Service; and

62 men and 32 women were present at Mass.

The Presbyterian Clergyman does not attend the funerals of deceased patients buried by the Asylum in accordance with Privy Council Rule No. 27, as it is not in accordance with the custom of his creed; we would, however, suggest that if he would satisfy himself that the patient was laid in consecrated ground the requirements of the rule

(Signed), GEO. PLUNKETT O'FARRELL, Inspectors of Lunatics and E. MAZIERE COURTENAY, Commissioners of Control.

would be sufficiently met, 16th August, 1890.

#### CARLOW DISTRICT LUNATIC ASYLUM.

CARLOW ASYLUM. nemerted on 18th March. 1890. Exercise.

On this date this Institution contains 302 patients, of whom 154 are men, and 148 are women. We found them almost all indoors, although the morning was fine. Dr. O'Meara told us that the morning was fine. had access to the airing courts, but preferred to remain indoors. We would suggest that regular exercise hours should be fixed, and that all who are not employed, and who are able to walk, should take exercise around the grounds morning and evening in charge of the attendants.

Clothing. Bedding.

The men's clothing consisted of a frieze jacket, cord vest, cord trousers, but no under vest or drawers, which were, however, stated to be supplied to the infirm, although we did not see any. The jackets, were, in many cases the worse of wear, and in some actual holes exist. The female clothing was somewhat better, consisting of a brown linsey dress, a flannel and a linsey petiticoat, chemise, apron, and shawl, with shots and stockings. In many of the dormitories the bed clothing appeared too light. It generally included one pair blankets, one rug or quilt, a mattress composed of hair and fibre, and a straw pallians -no underblanket. In many of the single rooms no bedclothing of any sort was to be found. The explanation given was, that the patients were dirty in their habits, and that bedding and beddlothes had been sent to the laundry. We would recommend that the stock should be increased, so that the required articles should be ready for inspection on the morning medical visit, as otherwise there is nothing to show that proper bedclothing is supplied at night. To prove the importance of this, we may mention that we found one patient lying on loose straw, and we were informed that some of the others were similarly treated, whose habits were dirty. Six single rooms on each side, called refractory calls, have tiled floors, and many of these have no bed stead, so that the patients are obliged to sleep on the floor. These rooms are heated only by an open fire place situated at the end of the corridor, in which a fire may or may not be kept burning at night

opens into a flagged corridor, with a door opening on to a yard, so Assess that they are necessarily cold and cheerless in the extreme.

In one of these rooms we found a wooden platform which could be abstanted by a hasy to the floron—a surling place now turniviling to sleep. In this part of the institution, the very sonte cases, requiring the greatest attention and care, are traveld—cases where realtenment often rendess them likely to give out of bod and to remain standing or lying movemed on the floor. We would suggest that these rooms should be removeded on the floor. We would suggest that these rooms should be entirely—the standard of the support builting separation, and the respective builting to simplify a support of the suppor

It is scarcely creditable that in the whole institution no padded room exists. One at least on each side would appear to be urgently required.

We found the sick scattered all over the building—some alone in Coodition of dorunitories, out off from any special attention, and some locked up in sick single rooms. One, at least, of them appeared, we regret to state, in a needected condition.

There appears no sufficient reason why, even in the present state of rangeal the institution, a domittory should not be set spart as a hospital sequent where the sink might be properly attended to by a nurse or attendant where the sink might be properly stateded to by a nurse or attendant up in single rooms, and one girl with her arms rectained; and, although this resistant attributedly indepens on the sous facts, we could although this resistant attributedly indepens on the sous facts, we could not required by Schedule No. 3 of 8 and 9 Vict, exp. 107. This book repetition had not born main buy mine a January 1814. The Dully Statement Book

was also irregularly kept.

We saw a strait waistocat in possession of a nurse, although by
Privy Council Rale 65, all instruments of restraint should be kept under
lock and key. The shower baths are also open and in the hands of
the attendants.

In many of the single rooms we found old wooden besiteach with Sensay controe channels and holes for the except of the patient's disabarge, states, which were received in leaden trays placed undermets. In some of the domitories similar trays are in use, on which backets to receive the right sell are placed; from these a certain amount of overflow which along place, into naturaling the bearts. Contrivence of this acre, which can place in the control of

It is unaccensary for us to describe the condition of the sanitary surrangements, the pencity of behind and washing trending the defective sevenenge, and the insufficient supply of water, as these nanteers always to the control of the control of the Conventor, Mr. Edicial Superintendent, and by the architect of the Conventor, Mr. and the control of the Conventor of the Conventor, of the data that the control of the Conventor of the the built or describes of patients while these necessities of life are deficient or imported.

The reports before the Governors also call attention to the great Detsient. The response before the Governors and additional day-room accommodation. This is most marked in accommo wards Nos. 4 and 8, occupied by the most troublesome and scatte cases, where the contract of the patients seated at the fire in the flagged corridors at there was not accommodation for them in the day-room of the contract of the contr

rised by the University of Southernoton Library Digitisation-Unit

Cantow ASYLUM. \_\_\_ Bathing.

Every patient is supposed to get a bath once a week, but the attendants whom we questioned, admitted that this rule is very irregalarly kept, while one of the patients said he had never had a bath, and another stated that he had been bathed only once or twice since his admission.

Although asked for, no reports of duties performed were presented to us by the matron (who was absent on leave), the head attendant night attendants, day attendants, or nurses. These reports are matters of great importance as showing the due performance of the duties carried out by these officials, and of the changes which take place in the patients under their charge. It is impossible that either proper discipline can be maintained or responsibility fixed unless these records

are duly kept. Amusements.

No weekly dance or musical entertainment, as is usual in other asylums, is held; and we noticed what was referred to in previous reports, that the furniture is of a very meagre description, and that a great want exists of those objects of attraction (except a few pictures). which tend so much to rouse the attention of the insure, and to give an air of comfort and homeliness to the wards.

Divine Strvice. Distary.

'The Chaplains' books show that 46 men and 50 women attend the Roman Catholic service, and 8 men and 8 women the Protestant worship.

The distany, a copy of which is attached, is deficient in some articles of nutrition essential to the successful treatment of the insane, and it is unnecessarily monotonous in its character. It will be perceived that the dinner meal of four days of the week consists exclusively of broad and milk, and that, on a fifth day, no potatoes or other vegetables are given.

#### CASTLEBAR DISTRICT LUNATIC ASYLUM.

CASTLEBAR ASTLUM

On the 9th October, 1890, we visited the Castlebar District Asylum. Inspected on This institution is so much in the hands of the contractors for the 9th October, extensive additions which are at present being carried out, that it was impossible to make an accurate inspection of the condition of the securiors patients, or of the provision made for their care and treatment, as at alterations and present many of the old wards are closed up, and the overcrowding is so additions.

great that even the attendants are turned out of their rooms. The new buildings are by degrees approaching completion, and, when finished, will afford fair accommodation for the insune. We think, however, that before the huilding is taken up from the contractor, the whole institution should be put in proper repair, as we observed that many of the ceilings had fallen down, and that in many of the old single rooms the floors are much worn, and will require to be relaid. The hundry and kitchen ceilings appear to have suffered from the effects of steam, and should be replaced by pitch pine sheeting. The old clothes beller in the laundry-a dangerous and wasterul apparatus-should be done away with, and a steam vat substituted. The floors of this room also require reflagging. The stores upstairs are too small, and most

room, with a gallery running round for the storing of dry goods Before the new wards are occupied by patients we trust that the Governors will consider the importance of heating the whole institution with hot water. Hot water pipes already exist in some of the old corridors, but these should be put in order, and the system carried out throughout all the wards, both new and old. By this means only can a proper temperature be maintained in so large a huilding. Hot water should also be carried into the sanitary blocks. Additional stairs are required in the new annexe building. The gas brackets are not suitable for use in a lunatic asylum. The dead-house is too small, and should be calarged, so as to afford separate rooms for males and females, a waitingroom for the friends of the deceased, and a post-mortem room. We fear that the general bath room, when finished, will be found too small for the number of baths to be put in it.

inconveniently situated. The whole should be converted into one large

We think that, as this institution is now about to be thoroughly re- Airing courts. organized, it would be a good opportunity to try the effect of taking down the walls surrounding the siring courts, so as to make the Asylum a thoroughly modern one. These walls give the place a prison-like

aspect, and shut in yards, which are not requisite for the use of the insone, who would be much hetter either employed on the farm or walking round it. The present situation of these airing courts is most objectionable, as they are in such close proximity to the kitchen and stores as to afford constant temptation to both the attendants and patients to congregate around these buildings We understand that a new system of sewerage-a matter of so much Sewerage.

importance for the health of the inmates-is about to be carried out.

So far as we could make out from the disturbed state of the institution, Condition of the patients appear to be well treated and clean. The men had frieze patients. jackets and waistoosts, with oord tronsers. We are of opinion that tweed would form a much more serviceable and cheaper material. The helding shroughout the institution would require to be completely Bediag.

renovated. Some of the mattresses are in rather a dilapidated condition. We think that the use of cocoa fibre is not alone objectionable, but most wasteful, as it lasts so short a time, whereas horse-hair is indestructable. Some of the heds in the refractory division had no sheets, others only one. 122 Appendix to Fortieth Report on District, Criminal, [Arr. E.

Attendants. The ratio of attendants to patients amounts to 1 attendant to 14 patients on the male side, and 1 to 10 on the female side. The night nursing is carried out by 1 male and 1 female attendant.

nursing is carried out by 1 male and 1 female attendant.

There are in the Asylum at the present time 230 male and 135 female.

patients. Since the list January, 37 men and 42 women have been admitted, and 35 men and 31 women have been discharged or died. Mo desthis were reported to us as calling for any special mention, nor was

destas were reported to us as cating for any special mention, nor was any occoner's inquest belia.

Employments. The number of patients employed is shown to be 120 on the male said. Of the men, 35 are employed on the farm, 4 as

tailors, and 3 as shoemakers. Twenty-one women are engaged at laundry-work and 14 at needlework.

Larger farm
As the accommodation of the Asylum has been so largely incressel,

required.

every effort should be made to increase the amount of land, twalve sare only being now under cultivation. We cannot too strongly impress on the Governous the importance of a large farm in connection with such an institution, supplying employment must beneficial in the treatment of insunity, and at the same time diminishing the coat of maintenance.

Divine Service. The Chaplains' books show that on the Sunday previous to or inspection, I male and 3 females attended the Prestyterian worship 5 males and 2 females were present at the Episcopalian service. The report of the Catholic Chaplain does not record the number attending

Mass, but we understand that the average number is about 70.

Burial. The Privy Council rule with reference to the burial of the dead from
the Asylum does not appear to be strictly carried out.

the Asylum does not appear to be strictly carried out.

Quality of feed. Of the provisions which we saw, we think that the meat might be

of better quality; but the meat store is unsuited for the purpose, and we think, in the first instance, a store with better ventilation should be obtained. The bread is not as good as we see provided in some other similar institutions, and the Governors might consider the advisability

a distary would be actived at which, without increasing the expenditure, would provide food more in accordance with the tasts of the people of the district.

16th October, 1890,

CLONNEL ASTLUM.

## CLONMEL DISTRICT LUNATIO ASYLUM.

On the 7th October, 1890, we visited Clonnel District Lunatic Asylum. This Asylum is much overcrowded. At present there are resident in the two houses, 295 men and 300 women—total 385,

Since the beginning of the year 90 patients have been admitted, 35 have been discharged, and 37 have died.

The want of additional accommodation has been under the considers Asitisation of the Board of Governor, who kare, with administle promptens, seesmed eleteralized to need the want to the insane poor of the county, and have found induced their architect to prayars plans for the enlargement of the diange to the insane, and the behinding are of the humarity, and the behinding of a dead-house and certain storage and the insuraity, and the behinding of a dead-house and certain storage. One of the county of

the constituty firewaster musther of admissions from the district.

We would further mixth for the consideration of the Beaul of Information with the consideration of the Beaul of Information and the Constitution of the Consti

tion.

The nale house has had much done to improve it, but the day-room Male house for the more excited men is much overcrowled. We understand that overcrowded are as a contract of the state to the span and additional room for their use. If the earth which surrounds the building be taken away, and larger windows put in, a very commoditions and completable sixting-room will

then be provided.

In all parts of the institution the overcrowded state of the wards is visible, but nowhere more so than in this house.

Owing to the want of room, 50 women are located here, which adds

farther to the overcrowded state of the men's spartments.

The various wards and corridors of the upper house are bright and

cheery. They are neatly decorated and furnished. Much has been done to render them homely and cleserful by a few cheap curies, pictures, and flowers. Some of the new day-rooms are particularly worthy of praise, as they have been lately papered and decorated. Here the women were found employed at needlework, and appeared happy and contented.

The patients, both male and female, appeared to be well dressed. The Gothiagnea's clothes were of good and warm material, and the linen was clean. All the men get clean shirts once a week—the farm workers twice. The women's clothes have sufficient diversity of colour to make them structive to the wearers.

The bedding throughout the institution is ample and of good quality; Beddingbut we think that under-blankets should be on all the beds, and that wooden beduteads and vir-ewven mattresses should be introduced by degrees in the infirm and hospital male wards.

We would suggest for the consideration of the Governors the im Method of portance of introducing some artificial means of heating. At present basing its warming of the house depends on open fire-places. It is obvious defective that the heat derived from them cannot extend to many of the single ross. In this ool and damp climate nething is of more importance

124 Appendix to Fortich Report on the District, Criminal, [App. P.

CORK ASTLUM

### .] una Private Lichatto Asysums in Irelana.

## CORK DISTRICT LUNATIC ASYLUM.

On our inspection of the Cork District Asylum during the 22nd, 23rd, and 24th April, 1890, we found 405 men and 52th women under treatment. Of these 286 are chargeable to the City, and 731 to the County.

Since the beginning of the year 31 men and 51 women have been
chitted: 17 men and 30 women have been instanced by the county of the

admitted; 17 men and 30 women have been discharged; and 13 men and 12 women have died.

No opecial remarks are called for with reference to the mortality during Mortality, the present year. All the deaths are returned as from natural causes, except in one case, which was the result of an accident, and formed the subject of furestigation by a cornorar jury. A stail so coursed previous to our causing into office the evidence taken at that inquiry did not come before us.

We are informed that the number of constions in which the cause of per surveilled that it verified by post surveine accumulation are very few. We are of constinuions, and the surveilled of the constitution of the post surveilled of the post surveilled or the post surveilled

made against the staffs.
We saw all the patients, who were kept in for our impection. It Exercise,
was reported to us that as a rule they go into the airing courts both
correlational advantages for open-sir operation that those physically capable
should not be fluinted to the airing courts, but that they should walk

round the estate, and that those whose mental condition will allow should go for more extended exercise in the open country. The clothing of the male patients consists of a tweed jacket, tweed Clothing.

valueds, molecular trousure, and shirt. In a few cases fluxual drawers and vest are given to old and feeblo men, but as far as we could see these genments went to be found in a very few instances. Otherwise is made in the warrath of the clothing in wister, now it suny change mode on Sundays or bibliops. We think that steps should be a considerable of the country o

On the female side, the draws consists of blane famual in winter, and print gowns in summer, we like app relictoria, a chemits, which it changed once a week, while a small red chany, and hosts and etcokings complete the formal clothing. The hard's its one small to be of any pote-tion in inclement weather, and we understand no other outdoor covering is given except a small number of clotax. We think that larger shawts, and boundes or hoods, about he provided, and that the redictoriat should be of ffamule in winter.

e digitised by the University of Southernoton Library Digitisation Unit

As to the nextness and cleanliness of the male patients we cannot be slip give a satisfactory report. Their dress was generally untidy; their linen cleanlines, solled. Amongst some of the imbedile boys we found some filthy heads,

Anther some side of things, when it is under stood that no watshing tests with a supply of hot water is to be found in the main intuitifing. One hotsit never interest is not see much also for the hospital, but this is quite inadequate even for the demands of take the stood of the sto

hospital, but this is quite inadequate even for the demands of sick patients. A commodious and fully equipped Turkish bath has been erected for the use of all the immates. This we understand is fully made use of. As to the comparative advantages of the Turkish bath and an ordinary washing bath in the treatment of the insane, we do not wish to offer any opinion; but in so large an institution as the Cork Asylum many must be found physically unfit to bear a Turkish bath. and even a greater number with so little brain power as to render is absolutely necessary that their bodies should be washed and inspecial by those in charge of them. We would therefore suggest that any existing baths should be put in working order, and that at least one central bathroom should be fitted up on each side for those who are unable or unfitted for the Turkish bath. We are further of opinion that the male imbecile and very demented patients should as far as possible, be collected in one ward, which ward might be placed in charge of an attendant and his wife who would be more likely to give close attention to the bodily condition of these helpless beings.

CORE

ASTLUM

windows have become fastened by rust; some are open and will not shat, while others are that and will not open. The separate building occupied by the farm workers especially calls for attention, as not alone are the floors not of repair, but the whole place has an air of dilapidation. The floor of the water-closet and buth-room on the second floor has become so insource as to oblige these rooms to be

shat up. The condition of the old closets and lavatories in the main building Closets and vould also call for special reference. Their tilled floors have been in Paviotica some instruction underminded with rais, so much on its to reader them masks. The number of closets in many wards appears utterly interest of the control of the cont

levatories is most deficient.
We are of opinion that the present size and position of these lavatories and w.e.'s reader these quite unitsed for the use of the number in these wards. We therefore think that will be nocessary to build a new system of water closets and lavatories as the rero of the present building, connected with it by a short passes, supplying cross ventilation, so important in the amintary arrangements of any public institution.

The main sewerage, we may here mention, is said to be in good order, and frequently flushed from a tank on the farm.

In many of the dominionies we found the ventilation most defective—Dymnionia specially was this translatule in one of the smaller rouns off the cross passages, where the small was so officative as to reader them quite miderables and unifor framana companion. In other consistence we miderable and uniform the same companion of the consistence we it is a question how far it is wrise to have private doubset for use in a public institution, but assecting the responsibility of the attendants for the mafe keeping of public and private property; but if the Overmore with that the purp galestent should were their orn doctine, the formitteins should not be used as above for them, rendering the recent

requirements of the institution, either (1), by supplying the wards and patients with the requisite return of clean lines by week, and by day to keep them properly clean; or (2), by affording sufficient employment for the number of female patients which the institution contains. No more healthful means of treatment is known for insane women than employment in a laundry. At present on an average fifty women assist in washing; we think that this number might be essily doubled with advantage to the insune and with the resolt of doing more work. The staff consists of three laundressee supervised by the matron. The chief laundress has charge of the officers' clothing ; the second is responsible for the ironing; the third attends to the washing. If the matron is to have charge of the patients in the wards and is responsible for the conduct of the nurses in their divisions, she must be unable to give time to this important work. We think that some one should be made responsible for the working of this department, the greater part of whose time would be taken up in looking after the reception and issue of the clothes and

re digitised by the University of Southemoton Library Digitisation Unit

CORK ASTLUM.

Statt

superintending the whole management of this important branch of anylum industry.

A separate building set spart as a daily laundry for the washing of

the dathes sailed during the night is also required. His should be intended the night that with separate means of weaking and drying, so that a far as possible those doctors should not mix with the general supply. This department should be in change of one of the inundresses who should be responsible for the return of these dothers the day following their desirg parts to the intendry. The remains of breast the most fails may be a supply of the properly done.

The hours of work in the learned year from 7.50 to 3.03, from 3.03.

to 1 o'clock, and from 2 o'clock to 6 o'clock p.m.

The male staff consists of the House Steward, Librarian or

Exachments, New Brigade Instructor (as these two latter officials as said to have other duties to perform, it singlist two with the assumant them by maness more in anordance with the momentures of officials in other argulantly, various arizana, end thirty-sine starbankins. The Matron, Asistanal Matron, Schoolmetrees, and thirty-sine starbankins. The Matron, Asistanal Matron, Schoolmetrees, and thirty-sine starbankins. The female side of 1 to 13. This is certainly not above the proportion of the starbankins of the female side of 1 to 13. This is certainly not above the proportion critical parameters of the properties of the starbanking and the starbanking starbanking in public suprass, but we are informed, nonexwer, that the staff sanctioned is not keep up to its full number. We trust that not inter will be last in falling up the vacancies, otherwise the craposaltility in the event of an oxident must rese with the properties of the starbanking the description of the control of the c

cleanlines, we think it must important, in so large an institution, that one of the higher officials should be in charge of the patients at all times during the day so as to supervise and be responsible for the conduct of the attendants. The duties of the Bandmaster, therefore, should be so defined that be

and the called on to assist the House Steward and take his place in the wards when the latter official may be absent.

Similarly, on the female eide, the duties of the female officials should be so regulated that one of them should be at all times responsible for the conduct of the female staff.

Amongst the attendants we saw several whose physical size did not appear to us to render them equal to the due performance of their duties in taking charge of the insens.

We were informed that these were handsomen. Although sunds in or great an adjunct in the treatment of the instana, and one sensitial in every well regulated asytum, it is a matter for consideration how far it is wis in a staff uncertainly week, with such a large purportion of patients required to the staff of the staff of the staff of the staff of the consideration of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of two on each side. This number must be quite unequal to take ours of much a number of the issues during the night, nor don't appear that their datase are properly defined for them. As we have acknowly pointed out, we think that the very demonsted and drive patients should be placed in one west. The night attendant should have optain intered the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of the staff of nature, and change them when required. Report Books should be APP. F.] and Private Lunatic Asylums in Ireland. performance of these duties and the results. If this were done we think

Cong ASTAUM.

sciled beds had been found on one of the mornings of our visit on the female side. A little care would soon reduce these numbers. Dealing with such a numerous body of the insane we cannot but think that steps should be taken to collect all those cases dangerous to themselves, either through their suicidal tendencies or from the results of collepsy, into one large dormitory, and to place in charge of them an attendant, who would be constantly in this dormitory, to attend the patients in fits, and who would be responsible for their safe keeping during the night. In this way only can these cases be placed in a position of security, and the Governors feel that they have done all in

their power for their safe keeping. We examined the Chaplains' books. On the Sunday before our Divige Servicevisit 21 men and 19 women attended the Protestant worship, 1 man and 2 women the Presbyterian service, while 264 men and 260 women were at Mass. We are informed that the Catholic Chaplain reads the burial service at the mortuary chapel over the patients dying in the institution. The Privy Council Rule states-"that unless the body undergoes anatomical examination it shall be interred in some proper and authorized place of burial, in the presence of the Chaplain," from which it appears that he should see that the body is laid in consecrated

ground. From the return of work appended to this report, it would appear Employment. that the number engaged on the farm is very small, 49 only out of 495 being so employed, especially when it is considered that the greater number of the insane come from agricultural districts. We were informed that the Governors have lately added considerably to the estate, and we trust that further additions will in time be made. It is useless, however, to supply land for the insane unless some energy be displayed in getting them to work on it. If the House Steward would take a little interest in getting the patients pronounced suitable by the Medical Officers to go out to work, and if the attendants were taught that it is their principal duty to get the patients to take an interest in their work, a better result would follow.

We visited the magnificent dining hall during dinner hour, and Dising-ball, saw all the inmates partaking of that meal. We were much pleased at the order and regularity which prevailed, a result we believe greatly due to the wisdom and munificence of the Governors in providing such a splendid room, so suited for the comfort-of the insane, and insuring the due and orderly serving of their meals. Some inconvenience is at present caused by the want of a proper scullery, but we understand a room for the purpose is being now built. When completed, it will be necessary that some one should be made responsible for the care of the stock and the due performance of the various duties in connection with the dining hall. We hope that when these arrangements have been made the patients who are considered suitable will be provided with knives and forks, and perhaps in time amongst co many musical people it might be possible to introduce the singing of a short grace before and after meals. These small things do much to induce order and decorum in the minds of the insanc.

The dinner which we saw consisted of beef and potatoes, and the food Distary appeared of good quality and well liked. No complaint was made to us with reference to any article of diet, nor from our examination of

CORE ASTLUM.

the provisions in store did we see any grounds for finding fault. I shape be a question first the consideration of the Governous if they would be easure with greater certainty and less trouble to the staff a good copying of must, in accordance with the terms of the contract, by barrier position cattle driven to the Asylum and impacted before being slaughtened on the premises.

Of the disary we wish to say but little, because so many different andeau reas said to be in such that is difficult to assertists with in really and the said of the said of the said that the section of the is at present in use. With reference to this we would only suggest for its improvement the shalllies of the pass only n-Pitaly, a satisfie of data more liked by the Irish peasant, and the substitution of points of the particular said of the passion of the passion of the passion of lattroduce the issue of boson and others, as a regular value of disk. It would appear eriterat, both for the welfare of the patients and the due to the passion of the passion of the patients and the due to the passion of the patients and the due to the patients and the due to the patients and the due to the patients and the due to the patients and the due to the patients and the due to the patients and the due to the patients and the due to the patients and the due

#### DOWNPATRICK DISTRICT ASYLUM.

ATTICE.

De the 3 cd October, 1509, we visited the District Asylmus at DevaLanguage and the Company of the Co

Down-

Clothiog.

causes. Both men and women appeared to be well dressed and wer fairly rest and clean in their persons. Friese coats and waistents, with frieze, or moleskin tronsers, are worn on the male side. Vest and faunel drawers are also supplied in the winter.

On the female side the clothing consists of :-

Two flannel petticoats; Winsey gown in winter; Print in summer; Check apren; Neckerchief; Shoes and stockings; Bodies in winter; List shoes.

Chemise:

ised by the University of Southampton Library Digitisation Unit

The building is of most modern construction, beautifully situated, and built, as it is, of red brick, has a warm and cheerful appearance. The corridors are bright, wide, and well ventilated.

Bedding.

On the male side there is ample room, but on the female side it is Downsuch overcrowded, and we trust that the Board of Governors will see PATRICK ASYLUM. their way to take the necessary steps to provide the required day-room and dormitory space. On both sides a day-room is required for the Formale side Infirmary; on the male side this might be done, as suggested by Dr. corresponded. Tener, by building a room in the rere of the present block, or by throwing the present day-room and dormitory into one.

Throughout the house the supply of furniture is deficient, old, and Furniture, &c. worm out, and the wards are bare and comfortless, destitute of all those srticles—such as hits of carnets, cheap curtains, and small ornaments which tend to relieve the surroundines and take away the prison-like

expect of an asylum.

A heating apparatus had been originally erected, but was found not Heating. to work, and therefore has never been used. We think that steps should be taken either to have the pipes already erected put in working order, or to introduce a new system of heating the words and dormitories, as it is undoubted that none require an equable temperature so much as the insane, who suffer so much from impraired vitality, and

who are constantly exposing themselves during the night, We saw the male patients at dinner in their magnificent dining hall. Use of dising-The room, however, appeared to he very empty, as only the well-room

behaved male patients are allowed to dine there. The more excited unles and all the fomales have their meals supplied in their various words. We think that this is an unfortunate arrangement; the dining-room was certainly a most liberal provision for the treatment of the insure, and we think that every advantage should be taken of it by bringing all the patients to it for whom room can be found. By this means the more refractory men would be taught to behave themselves with propriety, and the females would have the advantage of some change in the monotony of their existence. It is only notessary to consider how wearisome life must be in an asylum, when in bad weather the insone are confined in their wards all day, to see the advantages of such a dining-room.

The room requires painting and decorating, and a supply of tables and chairs would be necessary before further use could be made of it. The high walls surrounding the airing courts at the rere of the Walls round

asylum have a prison-like look, and detract much from the heanty of string courts. the building. We would suggest that the Governors should consider the advisability of removing these walls, as has been done in many modern asylums without any bad results, but rather adding much to the happiness and contentment of the patients.

The hedding consists of :-

Two pairs of blankets ; One pair of sheets ;

One under blanket; One hair mattress.

The bedsteads are of iron, but the collectics sleep on wooden frames. We think that a few wire woven mattresses might be introduced with alvantage as tending much to the comfort and health of the patients, to the cleanliness of the institution, and to lessening expenditure in bedding. The water-closets all through the building are of an antiquated type, Water-closets.

and should be replaced by more modern and improved sanitary appliances. The pressure of water is not considered sufficient to command the Fire appliroof of the institution in case of fire. We think that this should sacet.

# 134 Appendix to Fortieth Report on the District, Criminal, [Ass F

receive the carnest consideration of the Governors, and that steps should PATRICK at once be taken to provide adequate means of escape from the down. ASTLUM. tories on the upper storey. For this purpose an additional flight of stairs is required. One male and one female night attendant, assisted by one of the day Night

attendants, does duty on each side by night. Dr. Tyner states that attendants. this system works well, but we think that on each side of the institution a dormitory with a certain number of single rooms should be spenprinted for the use of suicidal and epileptics, and that these rooms

should be constantly under the care of a special attendant, We examined all the Statutory Books, which appear to be carefully kept Books On the Sunday previous to our inspection 39 patients attended the Divine Service. service of the Church of Ireland, 64 were at Mass, and 36 were present at the Presbyterian worship. We find, bowever, that in this Asylum

no detached chapel is to be found, a matter which we trust will be considered by the Governors at no very distant date. The amusements consist of football, handball, and a dames once a Amusementa

month. We trust that Dr. Tyner will see his way to increase the frequency of these entertainments.

We think that the dietary might be made more acceptable to the Distary. patients by making it more in accordance with the tastes of the people, by introducing more frequent dinners of bacon and cabbage, and potatoes and milk, and by substituting tea instead of cocoa for supper, These changes would provide a dietary not more expensive and more in

accordance with the food used by the patients in their own bomes. The mortuary at present in use is too small. The separate building Mortusty. of which it is a part should be entirely given up for this purpose, and should be fitted up with separate apartments for a visiting room post-mortem room, and receptacles for the deceased of both sexes.

> (Signed), GRORGE PLUNESTT O'FARRELL, | Inspectors of Lunatics and Commissioners E. MAZIERE COURTENAY.

10th October, 1890.

ENNISCORTHY DISTRICT LUNATIC ASYLUM.

ENNISCORTEN ASTLUM. This Institution at present contains 213 men, and 166 women. Since Inspected on the 1st January last the following changes have taken place, viz :and December, 1890.

			Males.	Females.	Total.
Admitted,			89	88	74
Discharged recovered,			19	11	28
Discharged unrecovered	3,		5	10	15
Died,			15	9	24

This shows an increase during the year of 12 patients.

APP. F.] and Private Lunatic Asylums in Ireland. Only one death calls for remark, viz. :- that of a male patient who Emprocement

was killed in an attempt to escape from one of the upper dormitories. ASYLUM. This and accident was carefully considered by the Board of Governors, This and accident was carefully considered by the Board of Governors, and was investigated by a Coroner's Jury. The patient, who had not occident. down any desire to escape for some years before, got up during the wight unfastened the window, pulled aside the bars, and attempted to be bimself down to the ground by his bedclothes, which were found futened to one of the bars, but the man himself appears to have fallen from the still of the window, a distance of about thirty feet. The Jury were of opinion that the fastening of the window was not sufficiently strong. I cannot think, however, that the number of iron bars should be increased, because bars on the windows of an hospital for the insane ere now almost entirely abolished as being an incentive to attempts at seane, and generally proving insufficient to afford adequate protection to the insane. I would not at the same time wish it to be supposed that I would advocate that proper steps should not be taken for the safety of the nutients, but this can be obtained with much greater certainty by

waviding proper shutters, and increasing the amount of supervision. The nationts appeared to be well clothed, and well looked after Continued They are clean and neat in their persons. The clothing consists of a rationts. winsey or serge dress, one winsey and one flannel nettionst, a chemise. a shawl, bonnet, shoes, and stockings, on the female side. On the male side a frieze jacket and waistcoat, cord trousers, shirt, flannel drawers and vest for the delicate and old, with boots, stockings, and hat. The linen is changed once a week and appeared clean. I may here state that due attention is given to the neatness in dress of the female satients, as at the time of my visit a nurse was giving instruction in dressmaking to the others. Nothing promotes good bohaviour amongst the insane so much as asstness in their clothing and persons,

The bedding is ample, and consists of a woollen rug, a pair and a Bedding. half of blankets, two sheets, a hair mattress, and paillage. In the case of patients of dirty habits straw is used. A number of wire-woven matteresses have been introduced, and it is to be hoped that in a short time a sufficient number will be obtained to do away entirely with the use of straw, which is more expensive, dirtier, more troublesome, and more liable to cause danger from firs. The sheets are changed once a fernight, the pillow covers every week. I cannot but think that the charts wight he changed oftener if possible with adventage

The corridors and day-rooms presented an extremely neat, cheerful, Ceritors and and comfortable appearance. They are tastefully decorated with plants, day-rooms. flowers, and pictures. The furniture is not alone useful, but ornsmental. I trust, however, that by degrees the number of chairs may be ineressed, as nothing tends more to the quietude of the insane than removate and comfortable reats.

The ventilation throughout the wards and dormitories appeared Hastine. excellent, but the temperature in my opinion is much too low, and I think in some of the small dormitories and sinels rooms the patients must suffer much from cold. Many of the insane suffer from a languid circulation, and constantly leave themselves uncovered. Even allowing that sensation is diminished in the insane, it cannot be admitted for a moment for this reason they should receive less care: rather should we te the more anxious to provide all the comforts which are considered necessary for the infirm and halpless. I would therefore ask the Governors to consider the necessity of providing some means of heating the dormitories and single rooms.

# 136 Appendix to Fortieth Report on the District, Criminal, [APP. F.

ASTLUM.
Fire supil-

The appliances for use against fire appear fully provided, and consist of hose and hybrant in each corridor and yard, with five tanks in the towers commanding the building, but as yet a fire brigade has not conguirsed. The Board may consider the advisability at some frame period of obstaining the services of an instructor to train the staff or under them capable of acting with prompitude in the event of an outbranch of fire.

The attendantal dining room does not appear entiable for its require.

to be found, which reflects the greatest credit on Dr. Drupes, considering his onerous duties.

I cannot say how much pleased I was with the beauty of the Asylus, which will for ever be a monument of the charity of the district owards the insane poor.

E. MAZIERE COURTENAY,

Inspector of Lunatics and Commissioner of Control.

10th December, 1890.

KILKENNY KILKENNY DISTRICT LUNATIC ASYLUM. ASYLUM. This Asylum contained on the date of my visit (9th December, 1890), St. December 176 men, and 157 women; the accommodation provided being only for 157 men and 139 women, so that the Institution at present contains

37 patients over the legitimate number. Since the beginning of the year

> 56 nationts have been admitted. 16 have been discharged recovered. 2 have been discharged unrecovered,

15 have died. The deaths call for no special remarks, all having been from natural

causes, necessitating in no case investigation by a Coroner's Jury ; nor have any serious accidents occurred. Restraint has on no occasion been had recourse to, and seclusion Restraint and

had only been found necessary on six opensions, and for a total of seclusion. 68 hours. The patients appeared to be well clad, on both male and female sides. Condition of

Perhaps at some future time it may be considered advisable to sub-putients. stitute tweed for the frieze suits at present in use, as it would be found tidier, cleaner, less costly, and not so heavy for indoor wear. Similarly on the female side it may be found possible, when the

temperature of the wards is higher, to do away with the use of shawls in the house. The corridors are neatly decorated and rendered comfortable and Decorations,

houselike by curtains and pictures. Dr. Myles appears to have done &c. wonders since his appointment as Superintendent, and I trust that the Governors will assist him in the various improvements which remain to be carried out. Much remains to be done, and the Governors should consider Artizans

the advisability of appointing on the staff some of those artizans who required. are generally to be found amongst the officials of public asylums, viz .--

A Carpenter, Shoemaker, and

Painter, by this means carrying out the necessary improvements at a cheaper rate than could possibly be done by contract, and at the same time

affording greater opportunities for the employment of the patients. The Board of Governors have had for a long time under consideration Alteration and various alterations and improvements, which they themselves consider improvements. absolutely necessary, so that it is needless for me to urve them further,

The matters to which they have principally given their attention to are the appliances for use against fire, the defective state of the laundry and the kitchen, and I understand they are perfectly satisfied of the wants of the Institution, and are only anxious to have the requisite works carried out, so that it is only necessary for me to say that in neither laundry, nor kitchen, are to be found any of the requirements necessary for the working of an institution of the present day. Any appliances which exist are of the most obsolete type, utterly worn out, and their use must necessitate enormous waste in fuel and labour. The woodwork in the laundry is so much decayed that it is only to be wondered at why s complete collapse does not take place. The range in the kitchen is worn out, is too small, and has no hot water boiler; two immense cauldrons exist on each side which have to be heated by separate fires,

# 138 Appendix to Fortisth Report on the District, Criminal, [App. R

KHARRY ASSLUM.

and in the same way the means of heating hot water, and drying, in the laundry, are so old as to necessitate daily repairs. It is therefore evident that both these departments must be entirely reorganized, and such alterations made to them as may be found requisits. At the same time proper storage can be provided for water at such a height as to command the roof of the various buildings, and hydrants both internal and external can be erected. There are certain other alterations and additions which I trust the

Structural. alterations and additions recommended.

Governors will also see fit to be carried out. 1. The chapel at present is unable to accommodate the number of

worshippers; it is badly situated in the centre of the institution, as in my opinion a place of worship should be detached from the main build. ing. In addition the space at present occupied by the chapel is urgently required for the accommodation of the patients. To sreet a chapel at the present day can be done at a comparatively small cost if necessary. At the same time I think the building should be an ornament to the insitution, as it will undoubtedly afford additional happiness to the inmate.

2. The dining rooms are inadequate to meet the demands of the number of patients. They are small and inconvenient, and the space occupied by them is argently required for other purposes. I think the opportunity should be taken to erect a dining room of size sufficient for the accommodation of both sexes. Nothing is more important for the use of the insane than a proper refectory, relieving the monotony of their existence, and instilling those habits of propriety, and control of conduct, so advantageous in their treatment.

3. The baths and water-closets are also of an antiquated type. The water-closets would require to be entirely reconstructed, so as in introduce into them the sanitary appliances of the present day. When the new kitchen and laundry are being built it would be important to supply a general bath room for each sex, where all the patients could be bathed once a week, under the superintendance of the Chief Attendants on each side, while the old baths should be retained for the daily work of the wards. 4. The heating of the wards and corridors should receive attention.

This can only be properly done by a system of hot water pipes running through the various rooms, as it must be evident that an equalic temperature cannot be obtained in this country by open firoplaces, and in this damp climate nothing can be more important than some means of counteracting the effects of the moisture of the air, both on the health of the patients, and the property of the institution.

5. Both external and internal hydrants are required, but far more important than these are the opportunities for the escape of patients in the event of an outbreak of fire. One additional staircase at least is nrgently required from one of the upper corridors.

I think that with these additions and alterations the Institution will be fully capable of taking up a position amongst the most modern of our asylums, and I am also of oninion, that by the removal of a number of useless walls in the upper corridors, with the additional space afforded by the removal of the chapel and dining room, sufficient accommodation will be provided to most the requirements for the accommodation of the insane of the district for many years to come.

required.

A larger farm The Governors should, however, take into serious consideration the importance of obtaining more land for the employment of the patients. The farm at present consists of twenty-five acres, of which six are under spade cultivation. This cannot supply sufficient occupation for the number of male patients who ought to be engaged at out-dur work. The Governors will, I am sure, agree with me that nothing is of greater importance in the treatment of the insane than healthy employment, and no employment is found so useful as work on the farm. To obtain more land ought to tend largely to decrease the cost of maintenance, and therefore no objection can be made on the ground of expenditure to obtaining a farm adequate to supply the wants of the Institution. I may here state that owing to the want of sufficient

KILKENNY ASTLUX

ground the Medical Superintendent has no garden, a comfort which is usually supplied to the Medical Superintendents of public saylums. The salaries and allowances of the staff of this Asylum have been for along Salaries, &c., time under the consideration of the Governors, but I am sure they will of staff. pardon me for again saking them to allow the matter to come before them. The number of patients in this institution has increased, but the staff has not, so that at present on the male side only ten attendants are available by day to take charge of 176 lunatics, while on the female side, excluding the night nurses, and those responsible for the kitchen and laundry, seven nurses have to look after 148 patients, giving a ratio on the male side of one attendant to seventeen patients, and on the female side of one to twenty-one, the usual ratio being one to eleven, One male and one female night attendant do duty on each side of the house. It is a matter for the consideration of the Governors whether it is wise to throw so much responsibility on one woman without assistance, and whether they consider the wages of £19 to the male attendant

and £15 to the female commensurate with their arduous duties and responsibilities.

The allowances of the Attendants, and their value, would appear to require revision. At present I am informed hutter is not given in their dietary, and that the value of their allowances has not been fixed for many years. I trust, therefore, that the Governors will allow Dr. Myles to place before them a table showing the food and clothing given to each attendant, valued at the present contract price, and that when these have obtained the sanction of the Governors they will be sent forward in order to obtain an Order in Council, so as to comply with legal requirements.

The Dietary does not in my opinion appear to be in accordance with Dietary. the food in general use amongst the Irish peasantry, and is inferior to the distary given in many Irish Asylums, but it is useless to go into the matter at present as no improvement can be attempted until a proper kitchen has been provided. The extra diet book shows that the sick and infirm are carefully supplied with all medical extras.

From the Chaplains' books I find that nine patients were present at Divice service. the Protestant worship, and that 144 Catholics attended Mass on the Sunday previous to inspection.

The Privy Council Rule with reference to the burial of the dead Burial.

cannot be regularly carried out in consequence of the distance of the temetery from the Asylum.

A weekly dance is provided, and in the summer the patients listen to Amusements. the Military band. Festivities are held on all the usual holidays. The women go out to walk every day, but the same privilege cannot be extended to the men owing to the want of a sufficient staff.

## E. MAZIERE COURTENAY,

Inspector of Lunatice and Commissioner of Control. 16th December, 1890.

# 140 Appendix to Fortieth Report on District, Criminal, [App. F.

KULARNE ASYLUM. Inspectof on 1890.

#### KILLARNEY DISTRICT LUNATIC ASYLUM.

I visited the Killaruey District Asylum on the 17th December. 17thDecember, 1890. The number of patients resident at that date wore, 225 men and 158 women. During the year the following changes had taken nlace :--

> 42 men and 51 women were admitted, 20 mee and 24 women were discharged recovered. 6 men and 19 women were discharged unrecovered. 23 men and 31 women had died.

Restraint and seclusion.

No serious accident of any sort has been recorded, nor do the causes

of death call for any remark. The patients at the time of my visit appeared to be fairly well

behaved, and I heard very little noise in passing through the wards. One woman was in seclusion, and one under restraint, and according to the returns, I find that two women have nearly at all times their arms restrained. I noticed a number of patients in strong dresses. Although the use of curves clothes may be at times called for I cannot but think that with a little more attention on the part of the attendants, the necessity for the constant use of so many of these objec-

tionable dresses would no longer exist. Clothing.

The clothing of the patients appear to be of good quality, and sufficiently warm for the season of the year. The men wear frieze jackets and waistcoats, tweed or cord trousers, with flannel vests and drawers where necessary. The women have a winsey gown and a flannel and

linsey petticoat, and a small shawl. Bedding.

The hedding consists of a quilt, three blankets, one pair of sheets, holster and holster cover. On the male side much more attention on the part of the attendants should he paid to the cleanliness of the bed linen, as neither sheets nor pillow covers were as clean as they onght to be. In many instances, especially in the new wards, bedsteads with wire woven hottoms and hair mattresses, have been introduced, and it is to be hoped that these in time will take the place of the old straw pulliasses and coir mattresses, as they will be found both cheaper, and

cleaner, especially with patients of dirty habits.

The two female corridors only just opened reflect very great credit Additions and improvements, on all concerned in their construction, as they afford excellent accommodation for the insane. The dormitories are lofty, containing sufficient space and well ventilated. The roome are divided in the centre by a wooden partition so as to afford a certain amount of privacy. I trust that proper attention will be paid to the furnishing of these wards, to the polishing of the floors, and to the painting and decorating of the walls when they are dry so as to complete the work which has been carried out with so much care,

Several of the dormitories on the male side are in the hands of the contractor at present, undergoing additions. It is to be hoped that these rooms before being again brought into use will be plastered. Unfortunately throughout the old building none of the walls were originally finished in this way. Nothing can be more important in an asylum of the kind than smooth walls; minimising the lodgment for

dirt, and rendering disinfection so much more easy. New canitary blocks are also being erected off the male division. These are certainly urgently required, and will, I helievs, be of the greatest henefit to the institution when finished, but I am of opinion that it will be found necessary to take steps to have all the old water closets improved throughout the building as they are now quite

At present the sewerage is discharged on a field at a little distance Krasswer. from the building, from which there does not appear to be any outflow. ASYLUM. I think this must be objectionable in warm weather, and steps should Dreinses. be taken to carry the drainage at least to a further distance from the

main building.

The water supply does not appear to be satisfactory. Some time water supply. ago the Governors entered into a contract with the Town Commissioners for the delivery of water at the Asylum. The supply at present does not command the roof of the building; does not at all times rise to the upper stories, and is not constant. I think that the Governors should obtain a legal opinion as to the terms of their contract, and then they will be in a position to determine what further steps they

should take so as to obtain an adequate supply. A very commodious and useful detached hospital exists in connec- Ho pital. tion with this Asylum. At present it stands badly in need of papering and painting. It is now occupied by the farm workers, but it may be a question at some future time whether it might not be a more suitable

residence for the sick, infirm new admissions, and those requiring special supervision. A new range is required for the kitchen. Perhaps it might be found more convenient to have this placed in the centre of the room, so

as to afford more space.

The Attendants' dining roomwould require some additional furniture, string-room and I would suggest for the consideration of the Governors the advisa- for nursea. bility of providing a sitting-room for the Nurses, as at present they

have no place except their bedrooms to resort to. The number of Attendants on the staff of the Asylum would appear Attendants. sufficient, as compared with other institutions of the kind, but Dr. Griffin complains that much trouble is caused owing to the number who

are incaracitated from duty by sickness. I would suggest that at least one temporary Attendant should be appointed for the present under the Privy Council Rules to meet any urgent requirements.

It would appear that 113 Catholics were present at Mass on last Divine service. Sunday, and that 8 Protestants attended Service. I trust that in future these returns will be given in the Chaplains' books. I understand that some difficulty exists in carrying out the Privy Rule Council with

reference to the attendance of the Chaplains at the funerals of patients buried by the Asylum. It is unnecessary for me to point out how important it is that the Rules should be strictly adhered to, Amongst other improvements which have been made in this Asylum, Mortners.

a mortuary for the recention of patients dving in the Asylum has been erected, a most important addition to the institution, not alone for sanitary reasons, but to enable that respect to be paid to the dead so gratifying to the friends of the deceased. The amusements provided consist of walks in the open country, Amus

a dance every week, a band-composed of the Attendants-football, and other games.

The books and registers are earefully kept.

I trust the Governors will at an early date take into consideration Increase to the advisability of obtaining additional land. At present the number farm desirable of acres under cultivation cannot afford sufficient employment for the male patients. An increase to the farm would not alone tend to the recovery and happiness of the insane, but should also assist in lessening the cost of maintenance.

E. MAZIERE COURTENAY, Inspector of Lunatics and Commissioner of Control.

24th December, 1890.

Lavage EUNNY Chapel.

#### LETTERKENNY DISTRICT LUNATIC ASYLUM.

Inspected on 17th May, 1890.

low rates.

On our visit to the Letterkenny Asylum on the 17th May the requirements for increased accommodation and the various plans suggested to meet these requirements were carefully considered by us. Although it is impossible that the suggestion to use the same roomss a day-room and a chanel could meet with our approval, it appears to us that the room at present set apart for a chapel, which has never, we understand, been consecrated, is most unsuited for such a purpose, placed as it is in the very centre of the wards. As a general rule, places set apart for public worship in asylums are dotached and consecrated for the use of one creed. Here a large room, evidently originally intended for the dining hall of the patients, situated in the centre of the main building, has been appropriated for religious services. We would suggest that this room should be converted into a dining hall for the male patients; that a detached chapel should be erected at a short distance from the main building and consecrated. To creet a small structure for this purpose would certainly not be expensive, as we understand that chapels constructed of wood or metal can now be obtained at very

Accommodstion for attendante.

Further, we found that wooden partitions had been erected in many of the dormitories for the purpose of affording accommodation for certain of the attendants. We think this is a most expensive proceeding, and would ask the Board of Governors to consider whether it would not be cheaper to hire, or even build, a few cottages for these officials rather than go to the expense of increasing the accommodation for the insans. We think that if the Governors will carefully consider these suggestions they will see that the amount of additional accommodation to be provided in their institution will not cost a very large amount.

Statistics

On the date of our visit we found 258 male nationts and 132 female. The friends of five patients, four men and one woman, contribute wholly or in.part to the cost of their maintenance. Since the 1st January last-

22 men and 25 women have been admitted; 14 men and 9 women have been discharged ; 9 men and 13 women have died.

The causes of death call for no special remarks, except in the case of a male patient who died on the 25th January, as the result of an injury to the spine caused by jumping from a window on the 29th December, 1889. The Coroner, we were informed, was communicated with, but he did not consider it necessary to hold an inquest.

Airing courts.

Both men and women were in the airing courts at the rere of the main building, and we understand they coldom leave these yards. For this we can see no reason. No asylum could be more magnificently situated than Letterkenny, and no place could afford better opportunities for extended exercise-situated as it is on elevated ground, with no buildings near, or any cause to prevent the putients walking either around the grounds or into the country.

Unsatisfactory condition of male patients.

Of the condition of the men we cannot give a satisfactory report. They were found listlessly wandering about or lying on the ground in the yards, in a very untidy condition as to their dress, and dirty as regards their persons. Some of the imbeciles were in a very neglected condition, with vermin-infested heads. We think that the use of this yard ought to be entirely given up. It is quite unsuited to the insane, affording no object of interest in its surroundings, and encouraging no balits of industry in the minds of those incarcerated in it. Further Repulse more more, its use has a most detrimental effect on the attendants who learn exercise and to think that when the insane are shut up behind high walls and unable employment. to escape they require no further attention. Every effort ought therefore to be made to encourage the male patients to employ themselves by bringing them out to the farm, and the attendants should be taught that their principal duty is, by example as well as precept, to get all who are physically fit to work either on the farm or at some other em-

LETTER-ERNEY

ployment. At the present date 40 are employed on the farm and garden : 5 in the kitchen; 5 in the shoemaker's and tailor's shops;

Employments

2 with the mason; 9 with the painter;

2 with the plasterer.

It must not be supposed that these numbers fall short of returns generally made of employment in Irish asylums, but we think that much larger numbers might be got to work. During our visit complaints were made that no further work could be found to do on the farm as the crops were all in, and that the amount of land was not sufficient to give constant employment.

We cannot too strongly impress on the Governors the importance of Incresse of considering these complants. To increase the number of acres in the farm desirable. farm ought to decrease rather than increase the expenditure, and the benefit to the institution must be acknowledged by everyone. It is not necessary that the land should be in a high state of cultivation; the more barren and rocky the soil the more employment for the insane, provided the staff can be made to take an interest in their work. At the present we think the Land Steward ought to make every effort to afford employment by oultivating the small extent of land at his disposal rather as a garden than as a farm, cultivating vegetable rather than ordinary crops. If the Governors would obtain the services of a permanent carpenter he would perhaps take more interest in the patients,

and might perhaps be able to induce one or two to assist him at his work. Of the condition of the women we can speak in terms of the highest Condition of praise. We found them sitting about neatly attired, cleanly in their female persons, and as a general rule employed at needlework, knitting, or petients. sprigging. We think that their satisfactory condition is greatly duo to the wisdom of the Board in obtaining the services of a trained nurse to take charge of the female department, by whose energy and habits of order and industry no doubt the satisfactory condition of the female wards has been brought about.

The clothing on both sides of the house appeared of good quality and Clothing. consisted, on the male side, of-

had been present at Mass.

LONDONDERRY DISTRICT LUNATIC ASYLUM.

ASYLUM. On our visit to the District Lunatio Asylum at Derry we were Immeded on 16th May. impressed by the evidence on every side of the efforts which are being 1850. made by the Governors to improve the condition of the insune chargeable to the district; we saw additional accommodation being provided, and improvements being made in the heating and sanitary condition of the wards. We must, however, at the same time record our opinion Unsultable

that no alterations or improvements will ever supply to this institution the requirements demanded by a modern hospital for the insane, owing to its present position, surrounded and overlooked as it is by buildings of all sorts, and its limited espabilities for affording agricultural employment, space for walking, or, indeed, even allow-room for exercise of any kind. Much indeed may be done to remove their present prison-like look by replacing with polished timber the flagged floors of some of the old corridors, and enlarging the windows of the single rooms; a work which might be carried out by degrees by the Asylum staff under the superintendence of Dr. Hetherington, assisted by a small loan from the Board of Control

On our arrival we found the patients enjoying themselves in the Loxporterary front of the institution, and were informed that the internal airing courts are now very little used. This is a step in the right direction Out-door which will not alone improve the health of the inmates, but will render Exercise, them better behaved, and cause them to be better looked after. Unfortunately the space afforded for recreation is so limited that the exercise grounds for the two sexes are placed in close proximity to one another, a most objectionable arrangement amongst the insane, suffering as they do from so many forms of mental disturbence.

On the date of our visit the number of patients in the Asylum Statistics, amounted to 204 males and 178 females-total 382. Since 1st January, 1890 :-- 16 males and 12 females-total 28-have been admitted : 15 males and 8 females-total 23-have been discharged : 9

make and 5 females-total 14-have died. In the case of a male patient dying suddenly while at work in the Mortality. tailor's shop, an inquest was considered necessary; death was found to have resulted from the rupture of a blood vessel. One death is said to have been caused by typhoid fever, and another patient is suffering from this discose.\* One of the attendants is also laid up with an

attack of erysipelas.

The courrence of these forms of acute illness ought certainly to warn Seweaps. those responsible for the health of the institution to look after the condition of the sewerage. We understand that a totally new system of drainage is about to be laid down all through the Asylum-a system on the most approved principle, carrying all sewers outside the building, We would suggest that advantage should be taken of this opportunity to remove all old sewers, as otherwise a dangerous source of ill-health will still remain.

The men appeared clean in their persons and tidy in their dress Clothing. Their clothing consists of-

Frieze coat and waistcoat,

Muffler. Finnel vest and drawers.

Cord trousers. Stockings and boots.

Shirt, which is changed once a week.

We think light summer suits might be provided for the quieter class of the male patients. The female dress at present consists of-

A dark linsey gown. A linen chemise (changed once a week).

Shoes and stockings.

One or two petticoats. A small shawl.

A hat or bonnet. An apron.

Cheap print dresses would look better in the summer; these would be brighter and could be kept cleaner, and they could be washed more frequently. The women in the noisy division did not appear so well looked after. We found one very dirty head amongst them, and their clothes were also shabby and hadly made.

On neither side of the house is any change of garments provided for-Sunday.

\* She has died since writing this report,

LONDONDERRY ASYLUM Beddior.

The bedding on both sides of the house requires much more attention on the pars of the attendants. The sheets and bed-clothing generally were not as olean as they ought to be, and many of the heds were without pillow covers.

The bed govering consists of-

Quilt : 2 pairs of blankets : 1 pair of sheets ; 1 hair pillow ;

I hair mattress and palliasse.

No under blanket. The bedsteads are in many instances of an antiquated pattern and unsuited for their purpose, but we understand that they are about to be replaced by bedsteads with wire woven mat-

tressee suited for the requirements of an asylum.

Every patient in the house gets a bath once a week on a fixed day Bathing. for each ward. When the present additions are completed the bathing accommodation will be all that could be desired. The taps of the bath are, however, not exactly suited for the use of an asylum, as at present

they afford most dangerous weapons of assault, Laundry.

The laundry work is carried out by two laundresses and twelve patients. Washing is carried on on three days of the week. The clothes which come out each day are sent back either on the next day or with the weekly washing. It would appear from the remarks which we were obliged to make about the bed clothes that sufficient energy is not displayed in this department. We think that washing should be carried on every day, and that the number of washing bins in the daily laundry should be increased, so as to afford employment to a very much greater number of patients. The limited room for exercise out of doors affords more reason for giving as much employment as possible indoors, and no employment can be better for insane women than washing.

We further think that the laundry staff alone should be employed in the department, and that none of the rest of the staff should have access to it.

We inspected the new addition, and were much pleased with the accommodation about to be provided for the use of the insane, which we consider in every way suitable to their use; but before being occupied we think the floors should be polished, the floors of the bathroom caulked and polished, so as to make them impervious to wet, and the walls of the bath-room tiled for a few feet, or rendered in Parisa cement, so as to prevent the accumulation of dirt.

The staff of attendants is composed, on the male side, of a head attendant and thirteen attendants, tailor, shoemaker, weaver, gardener, and curpenter.

On the female eide-the matron, head nurse, eighteen nurses, one night nurse, one hall maid, and two laundresses.

We would enggest for the consideration of the Governors the advisability of allowing the matron, who we understand has been lately appointed, to spend a little time in some public institution in order that she might be trained in nursing, and in the discipline of a modern hospital for the insane; and that, further, she should obtain some knowledge in the cutting out of clother, so as to improve the appearance of the female patients. We understand from Dr. Hetherington that two attendants are now on duty on each side of the house during the night. This is a step in

Printed image digitised by the University of Southempton Library Digitisation Unit

the right direction, and shows that the Governors understand the Lendonneau importance of the proper care of the insane during the night as of the Astrum. Question importance. We think, however, that with so large a staff on chty during the night, the number of soiled beds should be greatly decreased.

The returns of employment are as follows :---

improvement and comfort of the insane. Those patients who are capable of walking should go for exercise around the grounds, and those who are too excited or too feeble to walk should be allowed to use the airing courts in the back of the building. The male patients are dressed in a freize jacket and waistcoat, shirt,

Clothing.

vest, and drawers, boots and stockings. They appeared clean in their persons, and decently dressed; but no change is made in the clothing for summer and winter, nor are any different clothes allowed for Sundays and holidays.

The female clothing consists of-

A tweed or cotton dress, A grey flannel petticost, A striped drugget ditto, A linen chemise.

A woollen handkerchief, and

A brown shawl for out of doors, while some wear straw hats; Leather boots and stockings.

Canvas boots manufactured in the house might be found more useful for the women for wearing in the house, and would not be more expensive. A change is made on the female side in the clothing provided for the different seasons, but no alteration is made in their costume on Sundays and holidays.

All the female patients are properly bothed, their linen is changed weekly, and they are kept perfectly free from vermin; indeed, of some parts of the female division, we can speak in terms of unqualified

ledding.

praise. The bedding throughout the institution appears of good quality, and is kept clean. It consists of three blankets, a quilt, and one sheet, weighing in all 214 lbs. No under blanket is provided, and there can be no valid reason why no sheet, or only one, should be given. If the patients have not been accustomed to use them we think they ought to be afforded the opportunity of learning the advantage of proper bedclothes. As we have before stated, iron bedsteads, and wire wove mattresses have been provided in the new buildings, but, we hope that in time improved bedsteads and mattresses will be provided throughout the whole institution.

In the single rooms, occupied by wet and dirty cases, we find the bedding is not replaced in the rooms until three or four o'clock in the afternoon. This is a most objectionable arrangement. All the bedding should be in its place at the time of the morning medical visit; otherwise there can be no certainty in the mind of the medical officers, that these patients get clean and dry bedding, or indeed, as has happened

Day-rooms.

elsewhere, that they get any bed-clothing at all.

The day-room in No. 3 Division is bright with flowers, pictures, and objects to arouse the interest of the patients. Arm-chairs and comfortable seats are provided, while the stained and varnished floor is covered with bright and warm rugs made by the patients. The walls are wainscoted, and there are two fireplaces in which bright fires burned chearfully on the day of our visit. Such a room is a bright feature in a public saylum, and reflects credit on the officers of the institution. Some of the other female day rooms are also bright and cheerful, and as a result nearly all the patients were found tranquil and orderly, and a large proortion of them were usefully employed knitting, sewing, or rug making It is difficult to understand why the day-room of No. 1 Division should be less comfortable than No. 3; if it be that the so-called refractory class MONAGWAN are located in this part of the house, that is all the more reason why efforts should be made, by surrounding them with bright and pretty objects, to attract their attention and re-waken their reason; but we hope that in a short time all the day-rooms will be even further brightened and ornamented, as we feel satisfied that the Resident Medical Superintendent would wish them to be, knowing, as he does, what a beneficial effect cheerful surroundings have on melancholics, and the insane generally.

ASTUUM.

Many of the female dormitories, apart from unavoidable over-crowding, Demitories are in a very satisfactory state. Clean floors, clean walls, clean bedding and linen, and a complete immunity from vermin of any kind.

The diningroom, kitchen, and stores, appear too small to meet the Diningroom requirements of the institution. The dining hall is indeed so limited kitchen, and in area that it is barely capable of affording accommodation for half stores. the patients, so that additional space is urgently required. This could he provided either by increasing the size of the present room, or by

erseting another dining hall for either the males or females.

We were present at the dinuer, which consisted of soup and potatoes. The food was fairly good, and no complaints were made; but we think that a little more attention might be paid to the manner of sarving the meals. No tablecloths appeared on the tables; no plates, bowls, delf, or glass were to be seen. The only utonsils in use appeared to be tin bowls and bone spoons.

The dietary at present in use is sadly lacking in variety. On six Distary. days of the week the same sonp and potatoss or bread is given, and on Fridays bread and coffee. A dinner of bacon and cabbage, or of potatoes and milk, on certain days of the week, would add much to the

comfort and happiness of the patients who are able to appreciate it, without adding to the expense. The laundry work is carried out by a laundress, two assistant laun- Laundry.

dresses, and twenty-nine patients, and in addition three assistant nurses come in to help on two days a week. The washing-room appears rather small for the amount of work for which it is required. More washing is certainly done here by machinery than is usual in Irish saylnms, and though this has its advantages in washing expeditiously the heaviest and most objectionable part of the soiled clothes, still we do not think it should take the place of head washing, so far as to leasen the means of employment for the insane. We think, therefore, that the number of female nationts working in this department might be largely increased, and with this object a greater number of washing tubs might be obtained, so as to give them constant employment, either under the charge of one of the laundresses or of an assistant nurse, but otherwise the employment of nurses in the laundry ought to cease, as their services are uncently required in their divisions. The drying closet has not as yet been erested, which causes much inconvenience; but we trust that the necessary steps will be taken to complete this department without delay.

With reference to employment we find, from the farm account, that Employment. only twenty-two acres are under cultivation. This cannot possibly afford employment for the large number of male patients whose mental condition would be benefited by constant occupation. We therefore must urge on the Governors the importance of taking such steps as may be in their power to obtain additional land, affording by this means the

by the University of Southampton Library Digitisation Unit

ASTLUM. \_

most important adjunct in the treatment of the insane, and at the same MORLOWAN time supplying additional comfort for the inmates, and lessening the cost of the maintenance of the institution.

The male staff consists of the house steward, the land steward, the Staff.

engineer, an attendant who acts as assistant storekeeper, 22 attendants. 1 night attendant, 1 hall porter, 1 tailor, 1 shoomaker, 1 carpenter, and 2 labourers. We cannot but reiterate the opinion expressed by the Government Auditor, that in so large an institution the office of atorekeeper should be held by a responsible official, who should keep an account of his own receipts and expenditure, to be checked by the clerk, The addition of a painter and glazier to the staff would, we imagine, be of great use in so large an institution, would lessen the expenditure under this head, and would afford additional employment for the

patients.

The matron, 20 nurses, I night nurse, with the addition of a cook kitchenmaid, 3 laundresses, and 1 hall maid, comprise the female staff, We must impress on the Governors our conviction that the number of night attendants is not sufficient to look after the number of patients during the night. One man and one woman are not capable of attending on so large a number of the insane, many of whom are dangerous.

helpless, infirm, dirty in their habits, or sick.

The books and registers examined by us were found to be carefully Books and kept, with the exception of the Medical Journal, which is not amongst registers. the books in use in the institution. As this book is prescribed under the Act 5 and 6 Vic., cap. 123, it is necessary that in future it should be regularly posted up.

The Case Book is most carefully kept by Dr. Donaldson, whose intelligence and interest in his work impressed us favourably.

Divine service.

The Chaplains' Books show that 44 men and 41 women attend the Episcopalian service, and 34 men and 28 women were present at the Presbyterian worship on the Sunday previous to our visit,

As the Catholic chaplain does not keep a record of the patients attending Mass, we had no report before us of their numbers

Burish. The Privy Conneil Rule with reference to the burial of the insane is reported to be carefully carried out

#### The causes of death were :-

General paralysis of the insens. Exhaustion from epilepsy and other forms of brain Phthisis. Taberculosis, Other forms of lung disease. Enteritie and diarrhosa. Senile decay, . .

Three of the patients who died were admitted during 1890, and four during the previous year. The average age of the women at death was 45-66, and of the men (omitting one case in which the age was not ssertained), 48-25,

Eighteen patients are at present confined to bed, I was found in seclasion, and none in mechanical restraint. Thirty-six are reported as laving been wet on the night previous to inspection, and 19 as having been mised by the Attendant. Two men were on parole beyond the sounds, and 25 men and 7 women within the grounds.

The number of entries in the Register of Restraint and Seclusion size the 1st January, 1890, is 146. These refer to the restraint of one person, and the seclusion of 145. The number of patients who have

The numbers show a very large proportion of patients as being industriously employed, and reflects the greatest credit on the Resident Medical Superintendent, and the other officers of the institution. Such a large number of employed patients would, I think, compare favour ably with the industrial work of any asylum in the United Kingdon. and, indeed, such a percentage would be impossible in some of the English and Sootch asylums, where the proportion of acute and grave forms of insanity is so much greater then in Ireland. The work of the garden and farm might be made even a more important and valuable element in the life of the male patients. The difficulty, however, of finding assful agricultural work for many of them ought to convince the Governors of the great necessity that exists for increasing their esists by the addition of at least 60 to 100 acres. According to modern ideas the very least proportion of land to asylum patients ought to be one acre to every six patients, while in Scotland the proportion is often out to three, or even one to two.

The number of women employed in washing will, I expect, be further increased by the extension of the laundry.

All the clothing is made by the patients and attendants, including indulgent dresses for the female workers, made on the scientific dressmaking principle. Many of the boots are made by machinery, and this industry can be largely extended by enlarging the workshop. I found a number of patients engaged in basket-making; others making elder-down quilts. The old scarlet had coverlets are quilted into bright rugs, and even the old frieze in the men's coats become converted into door and kneeling AATLES.

The great and proper attention given to the occupation of the patients easily explains their marked tranquility, notwithstanding the overcrowded state of the house.

No serious accident has been recorded for a considerable time, and not only did I flud no patient in restraint, but I are wnone wearing strong clothes, which are often used to prevent the tearing of clothes. As another result of the proper employment of the patients, they can be allowed a large amount of liberty.

The string courts have disappeared in Mullingar, and I trust that with the unlarge-unois of the property, the boundary will not considered with the string count of the property, the boundary will not considered and the property of the property of the property of the property of the property of the property of the property of the attendants, for greater security for the patient's sub-looping than in the strongly there out the Property of the p

Another omission from the plans is a shoe-room at the main patients, entrance on each side of the house. Such rooms are now always considered an important part of saylum management. Coming in from work or excretes the patients change in them their strong boots for canvas shoes or elippers, thus not only insuring dry feet and cleanlines of passages, but parading against accidents by kicke or blows with

heavily nailed shoes.

I from the day-cross and domitories clean and in good order, but a cone at the addition and alterations have been complicited I treat the Governors will amention the larger introduction of pictures and down, and the support of the control of the control of the control of the analysisty of the pictures were unaccontrol to each thing in the own looms, but the answer is easy that it is now well recognized that are counting patients with heaviful objects, and giving these comforts to which they have been killender unacountomed, has a most powerful they have been killender unacountomed, has a most powerful The numerous consist of a based and webb't chear, and driner the

summer months cricket, haymaking parties, walking parties, tea parties held in tents in the grounds, and frequently long excursions. In addition the Resident Medical Superintendent keeps a small pack of Basset hounds, and the weekly hunt is a source of interest and pleasure to the patients.

The men'e clothing consists of :-

Clothing.

Linen shirt,
Pair of socks,
Pair of boots,
Moleskin trousers,
Frieze jacket,
Frieze vest,
Neckerchief,
Pair of braces.

The women's clothing consists of :— Linen dress,

Linsey petticoat, Chemise, Pair of boots, Pair of stockings, Hat, Neckerchief, Shawl,

Flannel underclothing in special cases as ordered by the Resident Monagona ASYLUN. Physician,

The underelathing is changed weekly, and I found all the nationts

APP. F.1

clean and tidy. A very large number of modern beds with wire bottoms have been Baddiag. introduced, but the Asylum still contains a counte of hundred beds some few of them dangerous, and all of them of antiquated type, which I trust the Governors will replace as soon as the funds available for the purpose will permit. The bed covering is very good. The blankets

(Irish manufacture) of sufficient weight and excellent quality, but I noticed that no under blanket is provided and that only one sheet is allowed. This the Resident Medical Superintendent informed me is owing to the difficulty of washing, and that a second sheet will be given as soon as the new laundry is in working order. Most of the beds were supplied with good beir mattresses, upbolstered in the Asylum, and each containing 26 lbs. of hair, as well as a hair bolster, and a feather

rdllow in the sick wards. The water supply from Lough Shedlin would seem to be amule, but Water supply. the protecting wall of the filter beds abould either be raised or replaced

by an iron railing.

The means of protection against fire are not altogether satisfactory. Fire appliances Emergency stone stairs have been provided in each division, but no hydrants have been put down in the front of the building. There is pelither five nor hand engine, and the attendants and patients are not

exercised in five drill. The ordinary dietary, an important element in the ourstive treatment Distary, of the insane, is extisfactory. The patients get stimbout and a quart of new milk, or bread and tea, for breakfast, and on Sundays all have bread

and butter and tea, while for dinner on Sundays, becon (8 oz.) with potatoes and other vegetables are given. On three days 8 oz. of beef. 22 lbs. of potatoes, sonp and vegetables are allowed, while on Mondays, Wednesdays and Fridays pea soup is given with 10 oz, of bread to each patient. I saw a relay of the patients at dinner, and I was strongly impressed with the urgent need of the dining hall, where the joints can be carved and distributed in the presence of the patients, and where the dinners can be served with the decencies of civilised life; table-cloths, knives, forks, glasses, and simple castors. The Resident Medical Superintendent is fully aware of the necessity, and I feel confident that be will provide them as soon as the necessary accommodation has been completed. The consumption of milk and eggs is an important point in an asylum distary, because they are not only typical examples of food containing all the different principles essential to the prowth and sustenance of the body, but because they constitute the most suitable form of neurishment for many cases of scute insunity. and the chances of a regisent's recovery (say from acute melancholis) will often depend on the generous and efficient administration of such last to the 18th October, I find that 23,041 eggs, 25,175 pints of milk. and 2,003 pints of beef tea have been used as sick diet in this Asylum. and these figures prove how fully alive the Resident Medical Superintendent is to the importance of nourishment in the treatment of acute insanity. The last point to which I wish to refer, connected with distary, in terms of commendation is the manner in which the meat supply is obtained. The contract is for a carcase of prime beef or mutton. The animal having been approved by the Resident Medical MULLINGAR ASYLUM Superintendent, is slaughtesed on the Asylum premises, and after the amount of histo, offil, de, is weighted and quid for a flow more content rate of \$94, per pound. This, menifically the most proper metion tenter rate of \$94, per pound. This, menifically the most proper metion of officer and present insistention, was first insistenced into Histo anyturn by my colleague, Dr. Courtenay, when he brocked superintendent at Limerick, and to me it assess a most extra confinency that Mullinger is the only Asylum in Ireland which has followed Dr. Courtenays example in this important and which has

Attendants.

The stat of attendants is fairly strong, but having regard to the increasing number of patients, a second nurse should to detailed for sight duty on such side of the bones, and they about the colligation to keep a careful record of four duties, and the condition of the patients during the sight. Having regard to this increase, I would also recommend the sight. Having regard to this increase, I would also recommend the sight. Having regard to this increase, I would also recommend the sight of the sight of the sight of the sight of the sight of principal cluttes it would be to keep the case boot fully posted, under the direction of the Resident Medical Supervinstancies, and the Amistana Medical Officer. I find in the Anylum nine paying patients at an assumal steranging from all to 45 days greatment. There patients up the history territy Council Rule permits the Governors to receive.

The books and registers of the Asylum were examined and found to be regularly and correctly kept, except the Medical Jonrual, which is a statutory book, and must be kept in the form prescribed by Schedule 3 of the Act 8 & 9 Vic., cap. 107.

Divine service.

in I canniced the Chaplain's books, and found that 19 men and 7 women attended the Protestant, and 9 men and 4 women the Protesty women the Protesty of the Protesty and Prom and 4 women the Protesty terian service the Standey provides to impuelton. 24th October, 1890.

#### OMAGH DISTRICT LUNATIC ASYLUM.

Ом4он On our visit of inspection to the Omagh District Asylum on the 14th Inspected on and 15th May, and again on the 11th June, we were impressed with 14th and 15th the architectural beauty of the external buildings and the magnificance May, and 11th of its situation, placed as it is on an elevation commanding a wide June, 1890. view of the scenery around, and surrounded by the open country,

affording unlimited resources as a sunatorium for the recreation and employment of the insane,

We understood that the Board of Governors have sanctioned the lecrease of purchase of a considerable addition to the farm, which consists at Farm. present of about thirty-eight acres under cultivation. The matter is at present in the hands of the Board of Control, but we trust that no delay may arise in carrying out this wise and benevolent measure for the benefit of the insune, affording not alone healthful employment, the most important of all means of treatment, but at the same time diminishing the necessary cost of maintenance.

We consider that the Governors deserve the very highest praise for this sten ; one which we trust will be followed by the Managers of many other public asylums in Ireland,

We found resident at the time 287 men and 243 women, total 530, Statistica. From January to this date-

38 men and 24 women have been admitted.

29 men and 24 women have been discharged. 9 men and 6 women have died,

The causes of death call for no remarks on our part. All appear. according to the return annexed, to have occurred from natural causes. The patients are quiet, and very little noise or excitement was to be observed during our visit.

One man was under restraint by wearing long sleeves, which were Restraint. tied behind him. One woman also is reported as at times having her hands encased in leather gloves during the night.

The wearing apparel on both sides of the house appeared clean, and Cothingwe would wish here to state that on the whole we consider that cleanliness is attended to in every department, both as regards the clothes and bodies of the patients. The men's clothing consists of-

> A frieze ischet. A frieze waistcoat, Corduroy trousers, Boots and stockings, Cloth can. Necktie. Shirt:

To which is added a woollen vest and drawers in winter. The shirts are fairly clean, and are reported to be changed twice a week. The female clothing consists of --

Dark tweed dress, Shawl, One petticoat with body.\*

Stockings. Boots or shoes. Chemise

All the clothing appeared of good quality, but we think the women would require another pettionat in winter.

\* Some delicate females have farmel vests in addition,

## 164 Appendix to Fortieth Report on District, Criminal, [APP. F.

ASYLUM.

If the males were provided with lighter jackets, and the females with bright print dresses for summer, the clothing might be more suitable for the season and not be more expensive.

Special suits for Sundays and holidays kept for those petients who employ themselves industriously (especially the artizans), often prove of great encouragement to those who work hard.

Bedding.

Quilt, Three blankets, One sheet, Straw tick, Straw pillow.

The bedding as a general rule consists of ...

In some few cases we found coir or hair mattresses replacing the straw ticks or palliasses. In no case, so far as our observation went, in a pair of sheets given except to some of the better class of female patients. In many cases no sheet whatever is supplied, in others no pillow, in so-called refractory cases no blankets, which are replaced by three rugs consisting of ticking, with a worn-out blanket quilted inside : a very insufficient covering so far as heat is concerned, three of these rugs weighing only 14 lbs. It must of course be allowed that in some rare cases of insanity it is absolutely necessary to provide some form of covering which cannot be torn, but this should be of the warmest material. With the exception of such very destructive cases we can see no reason why the usual amount of bed-clothing should not be supplied. It is ridiculous to say that the patients will not make use of the sheets, pillows, and pillow covers. A lunatic at Omagh cannot differ from a lunatic elsewhere in the world, and we feel assured the Governors do not wish that he should be treated differently. In some of the sleeping rooms part of the bed-clothes were not to be found, as the articles had not returned from the laundry. It would appear that the clothes sent out to be washed in the morning have to return for use on that night. All bed-clothes should be in the position where they are to be used at the morning medical visit, to insure (1) that the clothes are not forgotten and the patient left uncovered during the night; (2) that the medical officer may see that the clothes are thoroughly dry. For these reasons the stock should be so increased as to allow the clothes sent to the laundry in the morning to remain there to the next day.

Some of the wooden bedsteads were of an old and antiquated pat-

tern, and had served so long that their sholition ought to be favourably considered, even for the sake of cleanliness. These might be replaced by belateals of more modern type, with wire mattresses. In some cases we found patients elseping in struw ticking on the floor, and covered only with the refractory rugs, to which we have already

referred. Heating. Specia

Special reasons exist why the patients in this Asylem should be amply empiled with bed-clobes, from the fact that no means are supplied for the settificial heating of my of the operations, considerable and the setting of the settificial heating of my of the operations, the setting of the se

APP. F.]

beating the elecping rooms consists of two stoves in each corridor. We are informed that only one of these stoves is lit at one time during the night, and, as the corridors are very long, we cannot think that the amount of heat to be obtained can be appreciable in the single rooms adjoining. As no record is kept of the temperature, we are unable to state how low it may have fallen, but we fear it could not have been much above that of the external atmosphere. For the future we would request that thermometers be placed in each ward, and the variation of

Overon ASTLUM.

the temperature be recorded both by day and night. The ground at the rere of the main building is divided by high walls Exercise yards into two yards, in which the patients of each sex spend a considerable proportion of each day. These spaces can be only designated as yards, and certainly possess all the objectionable attributes which have been ever urged against airing courts. Their surroundings are most uninteresting. Nothing can be seen but high walls and the gravelled court; no flowers or any object of interest meet the eye. We see no reason why the patients should be confined to these yards. The Asylum is most charmingly situated, surrounded by a fine open country, where the patients could walk about in perfect safety, and a field has been given up for the use of those unable to take more extended exercise. We would suggest that the walls of these yards and the ball court should be removed in toto, the ground laid down in grass and flowers,

thus admitting air and light into the main building; that those patients who are not employed, and who are mentally and bodily fit to take exercise, should go for walks in the country, while those who are too

The lower corridor, relegated to the refractory patients, presented a Continues. cold and cheerless aspect. Little or no furniture, such as chairs, sofas, tables, arm-chairs, could be found. No sign of ornamoutation or anything to give that appearance of comfort and home so usual in modern public asylums, and so important to elevate the condition of the insane. were to be seen. The fact of the patients being troublesome should add to the importance of affording them more careful means of treatment. The walls in many places, especially in the single rooms, were worn into holes, presenting crevices for the collection of dirt. We would suggest that a certain number of single rooms for the reception of cases of unclean habits should be comented for a few feet from the ground, so as to present a smooth surface in order to facilitate eleanliness. No padded room can be found on either side of the institution. We think that in an institution containing so large a number of insane inmates one padded room at least should exist on either side

excited or too feeble to walk should enjoy the fields set apart for their

The chamber utensils are of galvanised iron, forming most dangerous wespons of offence, and from the difficulty of cleaning them would appear most unsuited for the use of the insune.

The water closets are badly ventilated, and from their close proximity Closets. to the wards must interfere with their sanitary condition. The number of closets appears inadequate for the population of the Asylum. In one case thirty patients have to use one water closet. The supply of baths Baths would also appear inadequate for the requirements of the institution,

forty-two patients, we are informed, having only one bath for their use. The woodwork in the bath-rooms would require in many cases immediate attention so as to prevent further outlay. The wainscoting of the dining-room appears to be decaying, and Dicing-room.

should be replaced by cement. As more than half of the wall has been

OMAGH ASTLUH.

Laundry.

Staff.

already done in this way, to complete the remainder would be a way, which it would supper should be no longer delayed. The flore in many places shows signs of decay, and unless specifity repaired, consided, and polished, the whole will have to be laid down afresh before many years have passed.

Exompt in the cases of the paying patients on the female side, no

tableoloths, plates, cups, knives, or forks are supplied for the use of the patients, who are only allowed vessels of tin with spoons. In the most modern asylums every attempt is made to improve the habits of the insane by supplying as far as possible all those articles which will tend

to foster babits of respect and control.

The working staff of the hundry consists of one hundram, who is assisted by three sassistant arrows, twenty-four framiae and four subpations. The number of frames patients employed it so small their is difficult to understand how the work of the department in the carried of the female patients as possible to employ themselves in this way, and also to carry on the working of the department with more efficiency, but in order to afford healthy exercise for the insant, which is the very self-stand and the self-stand the self-stand the self-stand to be the self-stand the self-stand the self-stand the self-stand between the self-stand the self-stand the self-stand the self-stand between the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand self-stand the self-stand the self-stand the self-stand the self-stand s

The male staff consists of a head attendant, gatekeeper, general aritan, engineer, tailor, sheemaker, mason, hall porter, and eigitieen attendants. The female staff is composed of the matron, head nurse, cook, kitchenmadd, and twenty-nine nurses. We do not think that the staff is no strong, taking into consideration the number of nations.

It certainly is not stronger than the staff to be found in other District Asylums in Ireland.

According to the return furnished to us, the night a steendarts must be included in the general said, as they are not specially designated. A further deduction must be made on the feasale side of three assistant nurses who cat is abundraesses. But we find that even this staff flow not exist. According to the last return of the auditor, the male stuff is short by one, and the finnels staff by two of the number substrated by Order in Council. The Governors should remember that no power exists to alter the staff aucticion by the Lord I bettemant in Council.

One male and one finuals night attendant take charge at night from 10 o'clock pu. 16 of 7 o'clock a.m. Is must be obvious that one mas or one woman is unable properly to look after so large a number of the inane. The cate of persons of lumpated intelled is quite as important by night as by day, and the result of allowing their dript habits to colled the control of the control of the control of the control of the If repore care was bestowed on the backens in the Arvium the un-

ber of dirty best found in the morning would quickly diminish. Bruther, we would impress on the Governors the importance of collecting as for as possible those patients requiring special supervision either from a suicidal tendency or from epilesys, and placing them in charge of as attendants, who should never lose sight of them during the night. Only by this means can accidents be guarded against.

Divine service. The Chaplains' books are carefully kept; from these we ascertained

that on the previous Sunday 27 men and 37 women attended the Presbyterian worship, 32 men and 42 women were present at the service of the Episcopalians, while 90 men and 88 women are recorded as having heard Mass. The Chaplains carry out the rule with reference to the interment of patients who are buried by the asylum.

OMAGE

The statutory books were inspected by us, and are properly posted up, Statutory with the exception of the Medical Register, which should be made up Books. more frequently than once a mouth.

Every praise is due to Dr. West for the manner in which the Case

Books giving the histories of the patients are kept up.

From the return of employment appended it will be seen that fortytwo men are employed at significant male to. We trust that when the additional land has been obtained that this number will be very largely increased, and that the attendant will be instructed that their duty is to encourage the insane to employ themselves by example as well as hy precept.

We trust that the spirit which has animated the Governors to increase the annount of land will also lead them to add to the staff one or two aritans. An additional carpenter, a painter, and an upholstewer would encourage and instruct many of the patients in their various trades, and would curry out the work of so large an institution quite as well ecomolically as actional continuctors.

The dietary, as published in the Annual Report of the Asylum, is as Dietary. follows:—

ORDINARY.

Breakfast, . 8 oz. Meal mada into Strabout, and 1 pint Milk; or Ten, Cocon, with
8 ozs. Bread (Male); 6 ozs. (Females).

Dinner, . 6 days: -1 pint soup, compaced of 34 oz. Ment, Barley, Pen-meal and Ontment, and Vegotables; 13 oz. Brend, or \$\frac{1}{2}\$ stone Potatoes, for Makes; and 8 oz. Brend, or \$\frac{1}{2}\$ stone Potatoes, for Examiles; Eridays,

Ten, with Bread, as above. Supper, . Same se Breakfast.

Dinner. Basi Steak, 10 oz.; Mitton Chop, 10 oz.; Milk, Rice, with Bread or Potatos, as above.

ROSPITAL DREX.

Regulated by the Physicians according to the necessities of each case.

At the time of our inspection we found 219 patients got tea and bread, 46 cocos and hread, and 5 milk and hread, for breakfast and supper; while 261 patients had stirabout and milk for these meals. We found, however, that during part of the year, generally from May until August or September, huttermilk is substituted for new milk. We are aware that buttermilk is an aliment possessing considerable nutritive value, and that it is a favourite drink with the rural population, but having regard to the Omagh dietary as a whole we cannot consider it as a proper nutritive equivalent for new milk in the breakfast distary, and it certainly should not have been substituted for it without receiving the Inspectors' approval in accordance with Privy Council Rule 10. It must be remembered that many of the insane suffer from a lowered vitality, others from rapid tissue waste, and such persons require food elements rich in nutriment and easy of assimilation. It is somewhat remarkable that thirty years ago the ordinary dinner given to the patients was more liberal than it is now. Then the male patients had 8 oz. beef, and one-fifth of a stone of potatoes three days in the week, and soup on two other days, while now on six days they have the same unvarying soup containing 31 oz. of uncooked mest, reduced by cooking to about 2 oz. For dinner we think that those patients who are able to eat meat should get at least 5 oz. of meat cooked and free from bone on five days of the week, while on Wednesday and Friday

ANTUR.

they could get potatoes and milk. The kind of meat should be to some extent varied from day to day; in many asylums a dinner of bacon and esbbage on one or two days in the week has been found inexpensive and to agree with the patients.

Some of the patients to when we apole complained of thirs food, and one woman stated that during her intelle years' rediscress a the Anylum also had tasted neither better nor an egg. We understand her statement intellectual that any the contribution by or at Ecuter do the patients get the bread, heater, and the alterior of a Ecuter do the patients get the bread, heater, and the alterior of the patients get the bread, heater, and the contribution. The art and the patients get the bread, heater, and the patients are the patients get the state of the quality or description best entited for the use of the insume. We think that in an anylum containing such a number of insurate, steps should be taken to guard against the supply of inferior patient for many the containing the sumber of the state of the patients of the sum of the patients of the patients of the sum of the patients

Pay patients.

From a return furnished to us it appears there are at present eighteen pay patients in the Omagh Asylum, and that the annual contribution on their behalf varies from £6 to £25 per annum. There are, we believe, no private asylums available for patients of their class, and the Governors were of course fully justified in admitting them; but they have infringed the Rules and Regulations of the Lord Lieutenant in Council by constituting them a privileged class, and by receiving on behalf of some of them more than the average of the general cost. The Privy Council Rule (No. 26) states that the payment of such patients shall not exceed the average of the general cost, and that they shall be subject to the same rules and regulations as other patients in regard to their treatment. care, and maintenance. Now, these patients at Omagh receive specific indulgences. They have ten for breakfast, beef ten, or meat equivalent, for dinner. They are permitted to wear their own clothes, nearly all aleep on ooir or hair mattresses, and they dine at a separate table, which is better served than the others. It must be remembered that the Irish district asylums are essentially

intended for the poor, and although, owing unfortunately to the nonexistence in Ireland of Royal or chartered asylums, it is useful that patients should be admitted into district asylums whose friends (while unable to pay the large stipends of private asylums) are able to contribute something towards their support, yet it was never contemplated that such a difference of treatment as exists at Omagh should be established. The Resident Medical Superintendent considers it necessary to order few articles of diet outside the regular scale, and it is certainly remarkable that so large a proportion of these should go to pay patients who, as we have already stated, get a more liberal dietary than their fellow-sufferers. Take one instance, that of a lady who receives almost every extra on the diet sheet in addition to her class dietary. We especially do not wish to be understood as objecting to these extras heing ordered for this poor lady, or for any of these patients; on the contrary, we consider that many of the benefits which the pay patients enjoy should be extended to the entire hody of the insane, thus mising the standard of comfort and trestment in Omach. At present it is manifest it must be painful to the feelings of some of the inmates of a public asylum, maintained partly by the Imperial Government and partly by the ratepayers, to perceive that an inequality of treatment

exists, and that a money payment can purchase privileges and comforts denied to the afflicted poor less favoured with the wealth of this

ASYLUM. . world. The objections which we reluctantly feel it our duty to make in vistae merard to the diet and clothing of the patients, to the heating of the Economy.

heildings, and the sufficiency of the staff, leads us to the important enestion of expenditure. If economy could be considered by itself, the Governors of the Omagh Asylum would deserve the highest encomiums in our power to bestow, for they have succeeded in reducing their exnenditure to a very low average. But other considerations besides secondary must be taken into account in the care and treatment of the insane, and we cannot express too strongly our opinion that the Governors have pushed economy too far. The large imperial grant, first made in 1874, was doubtless intended primarily as a measure of relief to local taxation, but it was also conceived that one of its effects would be to improve the condition of the insane poor, and such, we are justified in saving, has been the result in England and Scotland. We believe we are correct in stating that the Treasury, with a view of encouraging the Governors of asylums to take a more liberal view as to what is necessary in the proper treatment of lunatics, intended to limit their contribution to one-half of the net cost of their maintenance. and this condition has been rigorously observed in Scotland, where, indeed, the humane and generous treament of the insane reflects honour on the national character. In Omagh the average expenditure is lower now than it was before the receipt of any Treasury grant, and while the counties' liabilities towards maintaining the Asylum for the past three years (1887-88-89) is represented by a gross sum of £9,002 9s. 11d., the Treasury contribution for the same three years was scarcely less

than £15,936 16s. (Signed).

Parameters and the benefits of the pract the cause of death has been verified consistent the parameters around the proceedings of the proceeding of the proceeding of the proceeding of the instants, but without the benefit of the proceeding of the instants, but without the benefit of the proceeding of the instants of

Molical Staff. The medical staff at present consists of the Medical Superintendent, a Consulting Physician and Surgeon, two Assistant Physicians, and oscillational Assistant.

We would suggest for the consideration of the Governors whether it would not be advisable, in consideration of the large amount of models werk at present being carried out in the institution, and the very large number of admissions, to increase the start by the appointment of another clinical assistant and an apothearry, as at present the routine work of the institution must compy the whole of the time of the assistant medical officers, without latting into consideration the amount of pathological research which is being carried out.

Divise service. The institution is visited by three chaplains, Catholic, Church of England, and Presbyterian. On last Sunday the following is the teturn of the attendance at the various forms of worship:—

467 attended Mass. 139 ... Church of England.

No return is given of the number attending the Presbyterian waship.

Burial.

Burial.

does not, so far as we could learn from the chaplains' books, appear to

be carried out.

fixed by the University of Southampton Library Digitisation Unit

The lay staff consists of the secretary, assistant clerk, store assistant, RICHMOND schoolmaster, assistant schoolmaster, head attendant, tailor, shoemaker, carpenter, painter, engineman, bandmaster, gardener, ploughman, Lav stoff. messenger, two hall porters, two gate porters, thirty-two attendants, five night attendants. The matron, two school mistresses, the female assistant storekeeper, head nurse, forty nurses, five night nurses, three refractory maids, cook, assistant cook, two laundresses, one hall maid.

ASYLUM,

compose the female staff. It would appear to us that the number of officials whose duty it is to supervise the conduct of the attendants on either side is barely sufficient. Thus, on the male side, with such a very large staff, it would seem necessary that some one should be always on duty in the wards who would be responsible for the discipline of the staff, and for the cleanliness and order of the wards, and who would guard against anything like craelty or violence on the part of the attendants towards

the patients.

APP. F ]

The head attendant alone must be quite unable to meet all the dsmands on his time, and it cannot be supposed that he is at all times on duty. In his absence, therefore, no one would appear responsible for the conduct of the male staff.

No clerk of works appears on the list of the staff. Such an official in so large an institution would appear to be highly necessary, as he would not alone be responsible for the work done by the Asylum artisans, but for that carried out under contract.

Similarly on the female side, the matron and head nurse have charge not alone of the whole female staff, but of the laundry, kitchen, and workroom, whereas to properly supervise these latter departments would require the undivided attention of at least one officer.

Of the condition of the insane in this institution we can speak in the Clothing. highest terms. They are clean and well dressed. Some of the male patients had on their summer clothing of tweed. Frieze suits are supplied for winter use, and those who require it ars in addition supplied with fiannels. Only one change of linen is at present allowed during the week, owing to the deficient laundry arrangements. The women were also well and neatly drassed. They have also different dresses for sammer and winter, and in addition a closk of black cloth for out-door wear. Special aprons of a gay pattern are provided for Sundays and holidaya.

The bedding throughout the various dormitories and single rooms is Badding. of good quality, sufficient in warmth, and clean. It consists of-

One quilt, One pair of sheets, One pair of blankets. One pillow and cover, One hair-mattress. One straw-palliasse.

In many parts of the building iron bedsteads with wire-woven mattresses have been introduced, and we understand that it is intended to extend the use of these by degrees throughout the whole Asylum.

The corridors and day-rooms, especially on the female side, are bright and cheerful, many of them having been recently painted and done up. Corridors and Every attempt is being made to render them home-like and comfortable, day-rooms, by suitable furniture and tasteful decoration. In many places the old

172 Appendix to Fortieth Report on District, Criminal, [APP. F

RIGHNOND iron windows are being aholished, and light and air introduced by Astrum modern wooden sashes, removing by this means that prisco-like appearance so detrimental to the heat interests of the insane.

New usating y Mew annitury hlocks have been lately erected, consisting of balablocks.

The state of the contravant balas, supplied with the and sold water, water-closets, and mrinals, faced with giass, the whole brilling being lined with giased hirles. The work, though most excellent in design, has not turned out allogether a success, as the leakage from the eisterns has damaged the walks. Some of the water-loosate are not in working order, and some of the briches in the division walls have shoome loos.

These necessary require should be at ones looked to, yo as to prevent

further dilapidation.

A now and complete system of sewerage has, we understand, been carried out of late throughout the whole institution, which is said to work well.

The only other part of the institution which appeared to need regain was the lower division of the male house, where the woodwork vanted renewing, and painting required to be re-done. Of these requirements we understand the Governors are perfectly awars, and are only too anxious to have the accessary work carried on, but have put off their alterations and extensions in the institution which it may be considered alterations and extensions in the institution which it may be considered

Riches and Covenness are also perfectly evenue and have frequently had now been considered from the covenance of the covenanc

Laundry

larger than the room which would be found in a private braine for such as purpose, and one bavely receive the most for one day's consumption. All the other stores are equally insufficient, to the great loss and a superior of the such property of the such as

storing provisions should be made adequate to meet the wants of the establishment. To do this the following additions and improvements

1. A new kitchen and scullery, with the necessary stores for the

· would appear absolutely called for :--

male block, to be erected in proximity to the present dining hall, Вистионт with a new dining room, and recreation rooms for the male ASYLUM, attendants. 2. The alteration and re-fitting of the present kitchen by adding

to it the eculiery and vegetable house, and the erection of a larger

ecullery and room for preparing vegetables.

3. The fitting up of suitable stores in such a position that the work of so large a department should not interfere with the movements of the patients as at present. It is a question whether these buildings might not be more advantageously erected in conjunction with the new kitchen at the male house, or might he placed on the site of the present laundry.

Consideration might at the same time be given to the advisability of erecting a slaughter house, and bakery,

4. The erection of a detached laundry block, with adequate drying yard, fitted with the necessary machinery, and providing accommodation for the employment of the fomale patients.

In preparing the plans for these buildings and alterations due consideration must be given to the number of inmates for which provision should be made, or rather the question would be :- What is the number for which cooking, washing, and feeding may have to be done in the future? We think that if no extension is made to the present buildings the number might be fixed at 1,200, including the etaff.

The appliances to guard against fire consist of hose and hydrants Fire appliances fixed in the wards. No fire engine exists, but owing to the preximity of the city fire brigade, it is not considered necessary. It is, however, proposed to organize a fire brigade amongst the attendants to act until

extraneous help can be obtained. Notwithstanding the evidence on every side of the interest taken by Overcowling.
the Governors in the management of the institution, and the energy

displayed by the medical staff in working for the interests of the insane. the overcrowded state of the institution is only too apparent. We found on our visit not alone the dormitories too full, but the corridors and day-rooms, which are insufficient to accommodate the number they have to receive hy day, converted into sleeping rooms by night, and patients sleeping on the floors because no space can be found wherein to put bedsteads. Overcrowding such as this paralyses every effort to treat the insane with due regard to the nature of their discuses, and renders it impossible to supervise and properly care for them. This subject and the necessary steps to be taken to meet the urgent demands for increased accommodation have been constantly under the consideration of the Board of Governors, and call not alone for immediate attention, but for liberal and comprehensive measures to afford relief for the present, and provision for future requirements.

In dealing with this question it must be home in mind that the Increased acressure at the Richmond is but a small part of it. That to meet the esumoistica,

immediate demands for accommodation in this institution would be a matter easy to deal with. The real question is how to provide for the insanc poor of the city of Duhlin and its vicinity. It will not be denied that the lunatics in the Dublin Unions, and in all the unions in the district, have an equal claim with those in the Richmond to have provision made for their care, nor will it be denied that such provision is in the greater number of cases urgently required, and ought to he made in any scheme which may be decided on.

ASYLUM.

At the present time the workhouses of the district (including the North and South Dublin Uniona) contain about 700 lunstice and kinds. To provide accommodation for the greater number of these, out of the workhouse and outside the city, in more healthy auroundings and in purer sir, should be embraced in any measure to be adopted for the complete solution of the ouestion.

Furthermore, in dealing with an urban district such as Dublin, which is to a large extent composed of a floating population, very liberal provision must be made for the increase of the number of the insans in

proportion to the population,

Alternative The various schemes which would present themselves in considering the accommodation which is to be provided for the lunatic poor of the Motropolitan District would appear to be as follows:

- To increase the accommodation of the present Aeylum so as to remove the present overcrowding, and afford room for the insane population of the district in future.
- To divide the district, leaving the Richmond Asylum for the nee of those chargeable to the city, and building a new Asylum for the counties of Dublin, Louth, and Wicklow, and the city of Dropheda.
- 3. To erect a building as an annexe, or as a Provincial Asylum, to be fed by patients from the Richmond, which should be kept for acute cases, and for those whose dangerous propensities either to themselves or others would require close ampervision.
- With reference to Scheme No. 1. To increase the accommodation of the Richmond would not recommend itself to favourable consideration for many reasons:—

  (a) The Asylum has already grown to the full extent to which
  - such an institution, with a view to proper supervision, should be allowed to grow.
  - (b.) The area of land is small and cannot be increased.
    (c.) The institution is already so surrounded and overlooked by public buildings as to seriously interfere with the freedom, employ-
  - ment, and proper exercise of the insane.

    (d.) Under this scheme no provision would be made for the large numbers of the insane at present in the various workhouses
- of the district.

  With reference to Scheme No. 2. The erection of a separate Asylum for the use of the patients belonging to the counties, leaving the Richmond for the use of the city of Dublin, is a question for the

consideration of the local authorities.

Should the Grand Juries of the counties agree to erect a separate Acylum the numbers chargeable to each district at present resident in the Asylum would be as follows:—

To the City of Dublin.		360 r	nales.	419 1	emales.	779	
To the County of Dublin,		137	**	169	,,	306	
To the County of Wicklow,	- 2	60	22	43	12	103	
To the County of Louth,		47	**	54	**	101	
To the City of Drogheda,		6		14		20 .	

In round numbers 800 patients would continue to reside at the RECEMOND Richmond, so that accommodation would be left for the greater number ANYLUM. of the insane inmates of the North Dublin Union, but no provision would be made for the South Dublin Union.

The number for which accommodation would have to be made in the new Asylum for the county district would amount to about 350 from the Richmond, and if provision were to be made for the insane in the workhouse this number would be raised to 700.

This Asylum might be built somewhere in the County Dublin, in close proximity to a railway, and of easy access from all parts of the

district. No. 3, the Scheme, however, which would appear to us to combine the greatest scope for providing accommodation for the insane poor of the metropolic at the very cheapest rate, while it leaves the Richmond still free to treat the acute cases requiring immediate relief, would be to creet an annexe, or Provincial Asylum, under the 8 and 9 Vic., cap. 102, section 15, a few miles out of Dublin, on some line of railway, where a large grant of land could be obtained, and it may be added that rough mountain land would be perhaps the most suitable for the purpose. The building would be of comparatively cheap construction, built in blocks, so that at any time additions might be made without interfering with the existing building. The blocks might be appropriated and huilt for the suitable accommodation of special classes of the insane; thus one might be set spart for working patients—one for imbeciles—and another for epileptics. If in the first instance provision were made for 900 patients, this would relieve the Richmond, and would receive all the insane at present in the various workhouses throughout the district, who would in the first instance be admitted to the Richmond and then transferred, and so would become entitled to the Government grant. In addition to the blocks to be erected, provision should be made for separate cottages in which a number of the insane might be located in charge of an attendant and his family. In this way the neighbouring agricultural holders would become in time accustomed to the care of the insane, and by degrees an area would be established in which to introduce the boarding-out system, when fresh legislation could be introduced. This scheme offers an additional advantage by providing a sanatorium or convalescent home for those patients in the Richmond Asylum for whom change of scene, purer air, and country surroundings would be considered advisable,

(Signed),

GEO. PLUNKETT O'FABBELL, | Inspectors of Lunatics and Commissioners E. MAZIERE COURTENAY, J of Control.

SLIGO DISTRICT LUNATIC ASYLUM.

Silgo ASTLUM Inspection on 27th September, 1890,

On our visit of inspection on the 27th September, 1890, we found the number of inmates to be 251 men and 199 females-total 450, of which 248 are chargeable to the county Sligo, and 202 to the county Leitrim. Since the 1st January last 40 men and 37 women have been admitted, 27 men and 22 women have been discharged, and 21 patients have died all from natural causes, except in one case of suicide, which was duly reported to this office, and was under the consideration of the Board of Governors. We are glad to find that since this sad event the tank in which the body was found has been covered over by concrete, so as to be

System of non-restraint.

Very laudable advances have been made in this Asylum in the treatment of the patients with greater freedom than is generally to be found in institutions for the insane in this country. All the airing-court walls have been removed, and even part of the houndary wall of the institution is done away with, the result being that the patients walk about happily and contentedly, and the greater number of them are usefully employed on the farm.

The farm is most creditable to all concerned. The Governors have wisely extended it by degrees (at present there are 87 agres under "ASXLUM. pasture, and 26 under oultivation), so as to afford useful employment to Farm the patients, who then take an interest in their life, and feel that they are doing something for their own maintenance. We only hope that further additions of land will be made as opportunity may occur, as nothing tends so much not alone to the welfare of the insane, but also

to lessen the cost of their maintenance. Dr. Petit has done much to improve the farm buildings and workshops, which are now most suitable for their requirements, giving employment to the various artizans who are in the Asylum.

He has also built a coal store; but we would suggest that both stores be roofed over, as by this means a great saving would be effected in fuel, as the constant moisture must cause a very great destruction of

A dead-house has also been erected. This is a step in the right Dead-house. direction, and worthy to be followed in Irish Asylutas, as nothing causes such a bad impression of a public institution on the minds of the external population as to find on visiting their deceased relative that the body has been put down into a cellar, perhaps lying in a coffin on the floor. In our opinion it is a matter of the most vital importance that the feelings of the relatives of the insane should be respected by

treating the bodies of their dead with decency. The Asylum itself, though beautifully situated and affording in the Heating, front corridors excellent accommodation for the insane, has a cold and cheerless look. No means of heating exists except open fire-places. We cannot too strongly urge on the Governors the importance of erecting a system of steam or hot-water pipes, so as to keep up an equable

temperature. The insane suffer much from impaired enervation. They are constantly restless, and expose themselves at night. It must, therefore, be evident how much they must suffer during the cold winter months. Even having regard to the preservation of the building, the only way to ward off the effects of the damp of our climate is to provide some means of raising the temperature. The corridors themselves are inadequately furnished, except for a few chairs which Dr. Petit has lately Furniture. get in. The only other articles of furniture appear to be tables and forms of an old and obsolete pattern, and even of these the supply is small. The wards are bare of all those articles of comfort and ornamentation which are seen in Asylums of the present day, and which tend so much to render the insane happy and contented, and to a small degree compensate them for the deprivation of their liberty. In the new wards the walls are without plaster, which tends even more to intensify the cold and cheerless look of the surroundings; and in those rooms set apart for the sick we would impress on the Governors the importance of smooth walls, in accordance with all the laws of modern sanitation. The bedstoads are of different forms, some of iron, some of wood, many of them old and worn out. A large number of American wooden folding beds have been recently introduced on the female side. They are very nice, but we fear they are too light to be durable. We also found several wooden box bedsteads, with centre channels and holes for the escape of discharges, have been recently procured. We shall only say that such bedspeads are of a type long since discarded in

> Printed image digitised by the University of Southampton Library Digitisation Unit Library Digitisation Uni

most modern Asylums.

Stroo ASSULTS. Water-olosets &c.

The water-closets and urinals are of obsolete construction, inadequate for the requirements of the number of patients, and so close to the wards as to render it impossible to afford proper ventilation. The lavatories are too small, many of them out of order, and their tiled floor are in some instances said to be insecure. We would suggest that now sanitary annexes should be built in connection with each ward, contain, ing closets and lavatories of modern description, with a single both for the requirements of each ward, and these annexes should be out off from the main corridors by cross ventilation.

Bathroon.

Further, a general bath-room is required. Dr. Petit suggests that the present female dining-room should be converted into this use. We can see no objection to this on the female side, but the distance from the male wards would render the position unsuitable for the use of the The appliances for use against fire consists of hydrants and home of

which the supply is said to be ample, but the pressure of water is not sufficient. This urgent requirement would, we think, be supplied at a small cost by erecting sufficient tanks on the roof, and pumping up a supply from the tank on the ground. The means of escape would appear to be sufficient, consisting of stairs in the middle of the corridors. The clothing of the male patients appears to be much worn, torn, and untidy. Dr. Petit states this is due to the tailoring department not

being able to meet the requirements of the institution, and suggests that an additional tailor should be appointed for a time, in order to get up a supply of clothing. We think, however, that every effort should be made to train a large number of patients to this work. But even of

Clothing.

more importance will be the training of the attendants to pay more attention to the neatness of their patients. On the female side more attention was given to the dress of the women. The shirts and sheets are changed once a week, and both these and the patients themselves appeared clean. The corridors at the back of the institution, which are said to have been originally used as infirmaries, appear very ill-suited for the use of the insane. They are badly built, and in a very dilapidated condition. On the male side they should be converted into stores, as their close proximity to the Storekeeper's department would render them most

useful. On the female side they might be thrown into the laundry, and thus afford additional accommodation for the daily laundry, which is badly wanted. In this Asylum the greater number of the single rooms have been

removed, and the space converted into dormitories. By this means extra accommodation has been obtained, and the Medical Superintendent is of opinion that the comfort and safety of the insane has not been interfered with thereby. On the upper corridor much more accommodation might be obtained by converting it altogether into sleeping accommodation, by removing the partition walls, whilst the day-room space might be provided downstairs. By this means the lower corridor would be for use during the day, and the upper by night,

Dining-room inadequate.

We saw both sexes at dinner. The male dining-room is too small for the number of patients who have to make use of it. It is cold and cheerless in the extreme. The floor is tiled. No means of heating is provided, except an open grate. For the service of dinner none of the ordinary attributes of civilization are provided; no tablecloths, knives, forks, dishes, plates, mugs, or tumblers-nothing but tin perringers and spoons on bare tables. On the female side the accommon

Szzge

ASTREM.

App. F.1 as

define is even more lumind, as the dining-cone is in the beassent, afferding even less light and chertifinesse. A ray central and commodition stiming-com might be provided for this saw by conversing the present chaped to this use, and encoting a destabled chaped for the Outholdes on the grounds, whilst the Recreation Ball might be given up for the use of the Protestants on their days of words; I. I must be remembered that the Appirus was originally burit for \$260, and at diming-com space in not adomate for the requirements of the increasing

number of patients.

The distancy consists of attrabance and milk for breakfast, with ten Diesay, and bread on Sanday. For clinner links steen on two days, soup on you day, and the milk on three days. For supper cooks and bread is provided, This distancy might easily, and without extra one, to make a support of the control of the cont

without involving any serious increase to the annual expenditure.

With reference to the staff, we would estimit for the consideration of Cark and the Governors how far it is possible for one official to fill the desireagen, responsible posts of Clark and Storekopers, having regard to the great increase which has taken place in the other and responsibilities of these officers, which in almost all institutions of this size in Ireland are held by reparate officials. We understand that the present Gleek and Store heaper has held ellow industries of the Arghment of the Arghm

We are of opinion that the number of artisans employed in this attendants Azylma is deserving of the highest commendation, as tending to the said artisans, employment and contentment of the imans. We cannot but think, however, that the ratio of ordinary attendants to patients is numerically small, amounting to about 1 to 20 on the male, and 1 to 16 on the founds of the content o

The amusements consist of theatricals, for which a very well furnished Amusements, stage has been provided, and a dance once a week is also given.

In concluding this memorandum of our inspection, we desire to reintente but warm approval of the system of non-restraint and liberty allowed to the patients in Slipp Asylum, a system frangist with so much benefit to a most efficied class of the community. At the same time, we must not minimise the grave defects in other respects of the Amylum; the overcovering, especially of the female sloit, the want of any means of heating the dormitories or single rooms; the intuited character, and at times partial numbriality, of the distanct; the absence

inted image digitised by the Lingueraty of Southampton Library Digitisation Unit

of those objects of interest and ornament which exercise so heneficial an influence in arresting the attention and re-awakening the mental faculties of the insane. We are quite aware that the burden of county taxation is already heavy, and that it is not desirable to increase it by any unnecessary expenditure; but, referring exclusively to the cost of the maintenance of lunation, we would remind the Governors that the large Imperial grant first made in 1874 towards the expense of supporting the insane in District Asylums was intended not merely as a means of relief to local taxation, but equally as a means of improving the treatment and condition of the insane poor. Yet in the Slice District Asylum the average expenditure per capus for the past three years (1887-88-89) is lower (£19 14s, 9a,) than the corresponding expenditure for the years 1872-73-74, when it represented a cost per head of £20 fs. As a result of this reduced cost of maintenance, and owing to the condition attached to the Treasury grant being overlooked, the Governors have received during the past 15 years a large sum, representing several thousand pounds, in excess of the amount to which the striot condition of the mant would have entitled them. The Imperial Government has not sought to recover any portion of this large overpayment; but we think that this fact ought to stimulate the Governors to initiate the improvements which we think necessary, provided such improvements commend themselves to them as being reasonable. The more, too, the Governors improve the standard of living and comfort in the Asylum, the higher will rise the percentage of recoveries, so that the increased cost in one direction will be at least partially counterbalanced by the diminished expenditure in another.

To Dr. Petit is due the highest praise for the determined and fearless manner in which he has advocated a system of non-restraint and freedom in the treatment of insanity.

We have also to record the favourable impression which Dr. Lawless, the Assistant Medical Officer, made on us by his general intelligence, and the evident interest which he takes in the dispharge of his duties.

WATERPORD

ASYLUM.

## WATERFORD DISTRICT LUNATIC ASYLUM.

Inspected on There are at present 203 men and 157 women resident in this Asylum. Since the beginning of the year the following changes have 1890. taken place amongst the patients :--

53 men and 54 women have been admitted. 25 men and 25 women have been discharged recovered. 3 men and 2 women have been discharged unrecovered.

12 men and 14 women have died. The deaths do not for call any remark, all having been from natural

causes, necessitating in no case a coroner's inquest. Since the beginning of the year restraint has been resorted to with 14 patients, and 17 have been seeinded. At the time of my visit I found

No serious aecident is reported to have occurred since the beginning Warrayoun ASTLUM Only 5 patients were confined to bed on the date of my visit, and the health of the inmates is reported to be satisfactory; but one patient

The clothing, both for males and females, appeared to be sufficiently Clathing and warm and of good quality, and the linen seemed clean and well looked bailing. after.

The bedding consists of-One pair of sheets.

APP. F.

Three or four single blankets, One quilt.

was at the time suffering from typhoid fever.

One pillow and pillow case.

In very many of the dormitories and single rooms wire-woven mastresses have been introduced, and the old straw palliasses have been abolished.

The various wards and conridors are bright and cheerful. Especially do these remarks apply to the divisions lately built, as these rooms are lofty, well lighted, and well ventilated; their ceilings, lined with pitch sine, look remarkably well; their internal walls are neatly painted and secorated; and their furniture is suitable for the requirements of the

insue, and not objectionable in appearance, The decoration of the dining-room-where I saw a large number of Decorations. the patients at dinner-reflects the greatest credit on Dr. Atkins. The walls are covered with large pictures, which not alone render the come bright and cheerful, but must be a constant source of amusement and interest to the patients. I may here suggest that a painter should

be added to the staff. Dr. Atkins has done so much in the decoration of the Asylum that I think he should receive every assistance. Some repairs are much required in the old corridors, especially in Repairs the male imbecile wards, where the floors are so much worn as to

require to be relaid. This should be done in pitch pine, and the floors than polished. I think the Governors ought to take into consideration the question Heating. of the heating of the corridors, dormitories, and single rooms by a system of hot-water pipes. It must be evident that an equable tempera-

ture cannot be maintained in the various rooms of such an institution by open fire-places, and the insane must therefore suffer from our cold and damp climate. Considering the boiler power existing in the institution, and that the Governors have an intelligent engineer on their staff, the work could

not be by any means a costly one.

The appliances for use against fire appear ample, and consist of internal and external hydrants, with stairs for escape where required. Dr. Atkins also informs me that the water supply is abundant, the Water supply. Governors having lately entered into a contract by which they obtain at least one million gallons per year for the small sum of £20. This supply is not alone abundant in quantity, but excellent in quality, and

suitable for domestic purposes. The sewerage is reported as in perfect working order and to require Sewerage.

no attention at the present time. Some of the internal airing courts are devoid of any objects of Airing courts, interest. They are too small, and cast a gloom over the whole institution. I trust in time it may be possible to do away with their use

WATERFORD ASTLUX. A larger form entirely for the exercise of the patients and to lay them out in grass and flowers. To do this, however, it will be necessary to increase the area of the farm, which at present cannot be considered adequate for the number of patients. The estate consists of 25 acres, nine of which are under buildings

is desirable.

and four under grass, so that the remainder cannot afford the necessary employment and recreation which a number of men would require The Governors are well aware of the importance of a large form in connection with an asylum. No other means of employment will afferd the same interest as agricultural labour to the insane taken from a county like Waterford, where farm work is the general occupation, and no employment can be so healthy. A well-managed farm must also be a large source of income to such an institution, so that no objection can be made to the purchase of additional land on the ground of content, and nothing can tend more to the recovery of the curable, and to the

Wares and allowances of staff.

peace and content of the incurable. The Governors have had for some time under their consideration the wages of their staff and the regulation of their allowances. I trust that they have now definitely fixed on a scale which will prove to the benefit of the Asylum on the one hand, in ensuring respectable and trustworthe attendants, and to the contentment of the staff on the other. On examination of the Chaplains' books I find that 15 patients

Divine service.

attended the Protestant service, while 150 were at Mass, on the Sunday previous to my visit. I believe it is impossible for them to carry cut the Privy Council Rule (27) with reference to the burial of the dead, in consequence of the great distance of the cemetery from the Asylum. The various books and registers appointed by law are duly kept, Much is done for the amusement and recreation of the insane in this

Dietary.

institution by Dr. Atkins, who is indefatigable in providing marie lantern and other entertainments, besides a weekly dance, The dietary appears ample and suitable to the tastes of the insus taken from this district. The provisions which I saw appear to be of good quality.

ARMAGH RETREAT PRIVATE LUNATIC ASYLUM. We visited on this day The Retreat, licensed to receive 35 patients,

RETREAT. Inspected on

9th June, 1890. male and female. At the present time 20 gentlemen and ladies are resident. We spoke to all, and examined into their mental condition. No complaints were made to us except of undue detention; and in these cases we were of opinion that an asylum was the best place for them. On the other hand, we received testimony from many of their kind and careful treatment. We were informed that the mental oudition of one or two had much improved, and we hope to bear of their discharge at an early date.

Condition of patient.

We saw the ladies in their sittingrooms, which were comfertably furnished. They were neatly and becomingly dreseed, and appeared to . be carefully looked after, except in the case of a lady with a special attendant, who was not kept as clean as we would wish.

The gentlemen also appeared to be surrounded by as many comforts ss their circumstances will permit. We think, however, that on both RETREAT. sides of the house the old bedsteads should be done away with, and woven wire mattresses with iron bedsteads introduced.

The flushing of the water-closets also should be better looked after, Water-closets. and the outdoor earth-closets on the male side would require more

close attention.

The bathing arrangements are not in our opinion satisfactory. On Bathing. the male side shower baths were found lying open, and the reclining tath is objectionable in position and appearance. The female bath we did not see; but we understood that it is not used, as the ladies

bathe in their apartments. We think, therefore, that stops should be taken to erect a totally new system of baths connected with the wards of the asylum.

The Episcopalian Chaplain attends on the members of his faith at Divine service. unstated intervals. Fourteen patients attend the Presbyterian worship which takes place every fortnight, and three gentlemen attend the

service of that creed in the village. Entertainments for dancing or music take place every fortnight, and Amuseusents. both ladies and gentlemen have drives at intervals in the country,

whilst the gentlemen take extended exercise on the roads.

Besides the bath there is a large water tank or reservoir which is, we think, in a very dangerous position.

clergyman visits at irregular intervals, but in so important an institution a regular chanlain, who should visit regularly once a week, would be

of the greatest importance.

The Catholic patients are able to attend Mass in the village, and the priest visits them at times One gentleman and one or two ladies are accomplished musicians, Amusements

and amuse the others during the evening. The gentlemen have a billiard table, and lawn tennis courts are laid down at each house, Some of the ladies and gentlemen go out to drive in turn every day, and pic-nic parties are held during the summer.

Perhaps Dr. Eustaco will in time see his way to set apart one evening in the week for music, dancing, or theatricals, as such ovents tend much to relieve the monotony of the lives of the insane.

I saw all admission forms of recent natiouts and the Registry, but Statutory no Case Books or Medical Journal are kept. However, Dr. Wilson has books. promised that all books required under the Act shall for the future be carefully written up.

In conclusion, I must bear testimony to the careful manner in which Dr. Eustace attends to the comforts of those under his charge.

27th December, 1890,

#### ST. JOHN OF GOD PRIVATE LUNATIC ASYLUM, STILLORGAN, CO. DUBLIN,

St. Joun or Gop. Inspected on 25th July. 1890

On our visit of inspection, on the 25th July, to the house licensed to the Rev. Eugene Picard for thirty-five male patients, we found thirtyfive sentlemen resident.

The building is at present in the hands of workmen, as extensive Additions and additions and alterations are going on. When these are completed, we alterations understand, accommodation will be then provided for sixty patients.

Of the accommodation which will be then provided we can speak in Accommodathe highest terms. It consists of large and well-lighted sitting-rooms, broad corridors, thoronomly ventilated and heated throughout by hotwater pipes. These corridors are tastefully painted and decorated, From them open large and airy bodrooms, comfortably furnished with wire-woven mattresses, proper bedding, carpets, &c. When the additions

are completed, we think that most admirable provision will be made for the comfort and treatment of the insure. We think, however, that before the license is extended for a larger Necessity for a number of patients, a resident medical officer should be appointed, who Resident Medical officer should have the charge and treatment of the insane, and the responsible of the cal Officer. sibility of their care placed in his hands.

The Rev. Prior tells us that such is the intention, and that within a little time such an appointment will be made,

We saw all the gentlemen, who were in their several day-rooms, the Confidence afternoon being wet. All spoke in the highest praise of the care they the patients. received. Several, we were informed, are awaiting a medical contailtation with a view to their discharge.

We saw two gentlemen who are returned at present as suffering from Dynamanines. "dyneomenia, but at present in good mental health." We trust that these cases will be taken into consideration with the others, with the view to their discharge, as it must be understood that habits of intemx 2

excited cases among the women,

ST. PATRICK'S HOSPITAL (SWIFT'S), DUBLIN,

On our visit of inspection to St. Patrick's Hospital, we feel bound in Inspected to the first instance to record our opinion that, although the building must 26th and 30th be considered one of the most interesting monuments to that illustrious July, 1890. Irishman, Dean Swift, and a lasting memorial of his charity, it has long Locality not since ceased to be fitted for the object for which it was originally suitable. intended by its beneficent founder, and the present Governors would carry out his intentions with greater faithfulness, and with much greater charity to the unfortunate beings to benefit whom his money was bequeathed, by disposing of the present institution and seeking a more suitable locality at a little distance from the city, and there founding another St. Patrick's Hospital, which might truly be called a sanatorium for the restoration of the mental health of those whom Dean Swift was so anxious to benefit.

Surrounded as St. Patrick's Hospital is at present by lofty buildings, which shot out light and nir, built as it is with all the attributes of a prison, and none of those of an asylum, with massive walls, dark corridors, small windows, admitting neither sufficient light nor air into the separate rooms, and without day-rooms or dormitories, it would be impossible for any human power to convert it into a modern hospital for the insane. At the same time, we found that every effort has been made by the

Medical Superintendent, Dr. Molony, to render the insano inmates as comfortable as their circumstances will admit, and these efforts, we are glad to say, have mot the approval and support of the Governors. Amongst other improvements which we observe are the setting spart of rooms on each side for the purpose of infirmaries, the fitting up of bath-rooms, lavatories, and water-closets, the thorough and efficient

heating of the whole institution by the erection of a system of hotwater pipes, and the fitting up of a padded room. We saw all the patients in the house at the present time, numbering vatients. 36 gentlemen, and 61 ladies. We saw none under any form of restmint or in seclusion at the time of our visit, although we saw some very

#### ANTRIM WORKHOUSE

On the 8th August we visited this Workhouse, and saw all the Inspected on inmates classified as insone. The number fourteen in all, one man 8th August, and thirteen women. They sleeping accommodation for the women consists of a dormitory and three cells. The latter have no communication with the external air, and are consequently dark and un-fion. wholesome. The doors of these cells open from the corridor, which is nsed as a day room, and the only other means of veutilation are small openings into the dormitory behind. This dormitory is a shed, partly tiled and partly boarded, and we found eleven beds in it, not as clean as they should be, and untidy from the accumulation of rags and rubbish of all sorts which the insure are, if permitted, so fond of collecting. A paid nurse was formerly in charge of the lunatic department, but her attendance duties have been merged in those of the infinisry nurse, whose time, we would fancy, would be sufficiently taken up in looking after the sick in

her charge. The Local Government Board Inspector of the district has, we understand, recently called attention to the unsatisfactory condition of the

lunatic department, and suggested that a large room, formerly used as a nursery, should be given up to the insane, and that the me of the cells should be given up in toto. This would be, we think, a great improvement. A low unoccupied building runs along one side of the small exercise yard, and is might also be utilised in improving the accommodation. There is no bath and no means of ablution except a bucket, Bathing. We were informed that all the insane receive infirmary dist. Dietary.

(Signed), GEO. PLUNKETT O'FARRELL, | Inspectors of E. Maziere Courpenay. | Lungues.

15th August, 1890.

#### BALLYMENA WORKHOUSE.

We visited on the 8th August, 1890, the insane inmates of the Ballymena Workbouse, who are classified under two heads-

First.-Fifty men and fifty women transferred from the District Asylum at Belfast under the 9th section of 44 & 45 Vic., c. 98. sylum at Belfast under the 9th section of 44 2 45 Vic., c. 35.

Second.—Thirty-two men and seventeen women who are immates of insuraismates.

We cannot see any reason why this distinction should exist. Little, if any, difference is shown in the mental condition of the two classes, and the fact of a reasonable sum being paid by the Governors of the Belfast Asylum for the support of the petients sent from that institution should be no excuse for treating those who have not had the

the idiot wards.

fortune to have been there with less care. With reference to the First class, we found the accommodation pro-Accommodawided for them to consist on each side of a day-room fifty-two by twenty tim for First fest, and a dining room sixty-six by twenty feet, and four dormitories Class. overhead. The day-room is small for the number of patients. The farniture consists of six arm-chairs, tables and forms. It is heated by a stove, the flue from which heats the dormitories above. At the end of the day-room and dormitories, out off hy a wooden partition, but ventilating into them, are the water-closets and lavatories. A bath-room,

ANYRDA Workhouse.

BALLTMENA WORKHOUSE. Inspected on

8th August, 1890.

. Printed image digitised by the University of Southempton Library Digitisation Unit Printed image digitised by the University of Southampton Library Digitisation Unit

with hot and cold water, is provided upstairs, and downstairs is a BALLYMENA WORRDOWN, kitchen, to which the food is brought. At one end of an upper dormitory are two single rooms partitioned off by wood. No means for lighting or ventilating these exist further than two small air-holes, which admit little air and no light. The dining-room is provided with tables and forms, but no table-cloths, knives, forks, or plates are given. The bedding consists of a quilt, two sheets, three blankets, and a straw tick.

On the female side the linen was fairly clean and in good repair, but Bedding. on the male side its condition was not nearly so satisfactory, the sheets

and pillows requiring much closer attention both as regards mending, renewal, and changing when dirty. In one of the dermitories a most offensive smell existed, showing that the straw also required to be looked after. No chamber utensils are provided in the dormitories; a few night chairs exist, but upstairs nothing is provided but soil buckets. The women appeared fairly clean and tidy in their appearance, but their dresses are much worn and require to be renewed.

Condition of patients.

On the male side the nationts were very untidy, lying about on the ground, their clothes dirty and neglected, evidently showing either negligence or ignorance on the part of the attendants. On both sides a small yard has been partitioned off for the exercise of

Exercise yants,

the patients. It measures thirty-four by fifty feet, and therefore must be manifestly useless for the purpose for which it is intended. On the female side the stairs leading down to it are steep and dangerous. We think that all the patients, both males and females, should be sent out to the farm, where the men should be encouraged to work, and the females to take exercise round the grounds. Three attendants exist on each side. On the male side they are said

Attendants.

to have received no provious training, and appeared to pay very little attention to their duties. We think that in future the attendants should, in the first instance, be selected by Dr. Merrick, and should be thoroughly trained at the asylum; that they should be men accustomed to farm work, who should take out the patients and, under the direction of the Master, assist in tilling the ground. The patients also who are selected for transfer from the asylum should be farm workers who are willing to employ themselves.

Accommoda-Second Glass.

Attendants.

With reference to the Second class-the inmates of the idiot wardthe accommodation for the males consists of a corridor, with three dark and ill-ventilated cells, with tiled floors, leading off it, a dining-room floored with concrete, with a bed in the centre, in which one of the lunatics sleeps. Above there are two attics too small for the number of occupants, and so close to the roof as to afford little protection from cold in the winter. These attics are approached by steep ladders, so steep and rickety in construction as to be dangerous for the use of the healthy and strong; how much more so for the insane, many of whom are infirm, and some epileptic. On the male side the lunstics are attended by one paid official, at two shillings per week, assisted by a pauper boy. Neither appear fitted for their duties. One is too old, and the pauper boy appears little better than one of the patients. On the female side the lunatics are under the charge of the infirmary nurse, who has in all 114 patients under her charge. It is, therefore, impossible that she can afford much time to supervise the care of the insane. Exercise vard. On both sides an enclosed yard exists for exercise, with an open ash

pit on one side, full of refuse of all sorts. In these yards we found the patients sitting; the men lying about listless and idle, without anything

il mane therifold by the University of Southampton Library Dignisation Unit

to do, or any object of interest to look at.

App. F.1

We think that every excess should be made for the condition of patterner, the instants in lists workshoose, when my generally three against the Votacousak wishes of the Guardinas, who are only nations to be relieved of the repossibility of their care; but at Bullymma the case is different, on here a voluntary contract has been made for the care of the instant, and therefore, are weall below, no difficulty can be found of at least story of the contract of the

of the lunatic inmates,

(Signed), George Plunkert O'Farell, Inspectors of E. Maziere Counters. Linguistics.

15th Angust, 1890.

#### BELFAST WORKHOUSE.

BELTAST WORKHOUSE.

On our inspection on the 3rd and 4th October, 1890, of the lunatics Invested es at present inmates of the Belfust Workhouse, we were struck with the 2rd & 4th Oct. exceptional circumstances under which this department is placed. Here we have a building, built evidently at a considerable cost, of imposing aspect, situated in its own grounds, with its own staff, its own laundry and kitchen, its inmates-who are all more or less of impaired intellect -entirely separated from the inhabitants of the workhouse; in fact, having all the attributes of a large arrium. Yet although it can be denominated nothing but an anylum, and although no pretence is even made that its immates are treated as free agents, it is kept up without any legal sanction, and its inmates are detained and are placed, without any fault of their own, beyond the protection which the law allows to every individual, viz :--that their liberty should be only taken away by judicial authority under a medical cortificate, and are descrived of the protection of those safeguards which the legislature has from time to time provided for the better treatment and protection of the insane, We would, however, wish it to be understood, that we are far from seeking to reflect on those who are responsible for the management of the institution. The Lord Government Board never intended that the Irish workhouses should be converted into institutions for the insune. The guardians, we think, have lovally done what they considered necessary for the insane poor. Nevertheless, the fact that no one has been No person considered directly remonsible for the care of these irremonable human directly beings has led to a want of interest in the management of the department, and to many defects and irregularities in the care and treatment for ear of of its inmates. It is, therefore, our duty to call attention to certain defects which call for speedy redress. For instance, we are of quinton that the number of cases kept in bed, amounting to, at the date of our Number of visit, 41 on the male, and 87 on the female cide, are far too many, raticuts conas they would appear to ue to be confined to bed not from physical

infirmity, but merely to save the trouble of attending to them when up.
For example, we saw a young man—J. B., act. 21—admitted 31st
December, 1834, who had been confined to bed ninco June, 1886, in
accordance with the report given to us, because his habits were dirty,

and that these habits got worse when up

BRITART

An epileptic child-C. C., set. 8-with congenital weakness of one WORKMOUSE, side, although she could walk well, was for a great part of each day in bed because she was troublesome and destructive, and has never been in the open air since May, 1886. Many epileptics appeared to be kept in bed because they suffered from

frequent fits. We may here remark that the bodsteads in use for epileptics appeared

too high, and unsuitable for the treatment of such cases. Restraint. Mechanical restraint would appear to be made use of indiscriminately,

in many instances without sufficient reason for its use, and for periods of

time beyond what was required. We saw a small child-C. M.-with arms constautly tied because she attempted to bite and scratch those about her. This child was also

without shors and stockings We found a case of puerperal mania, admitted on the 18th September. constantly tied in bed since her admission, suffering from bed sores. We may mention that overperal mania is a form of acute insanity generally

amenable to proper treatment, and which, in our opinion, pre-eminently requires the careful nursing and constant supervision of a fully equipped asylum.

On the first day of our visit we found a man under restraint in bed, suffering from delirium tremens, who had just been admitted. This

restraint was, however, dispensed with on our second visit. Employment. On the roals side no means of employment of any sort appeared to exist, and we did not see any of the inmates cagaged in any form of industry. The Master told us that these men were not accustomed to

agricultural work, but we think if an attendant were employed, whose duty it was to work on the grounds around the house, he would induce a large number to work with him. In Scotland the outling and preparation of wood for lighting fires has been introduced amongst the insane in workhouses, and without any accident, so far as we could ascertain, from the use of wood choppers. In the South Dublin Union the manufacture of straw envelopes for bottles is said to have been introduced into the lunatic wards, and to afford useful employment. At any rate we are of opinion that it would only require a little energy to have a number of the men at some useful work. The guardians may accept our statement that excitability among the insane finds its full vent in physical labour, and that the more the patients are employed the more easily managed and less excitable will they be.

On the female side the lanndry, cooking, and sewing afford useful work, but even here we think that the number employed might be increased.

The number of the insane in this workhouse at the time of our visit amounted to 147 males and 260 females, whilst the paid staff, respon-Attendants. sible for their care, consisted of 1 female apperintendent, 2 male attendants, 1 melo night attendant, 2 female attendants, 1 female night attendant, I laundress, and I cook.

The guardians will, we are sure, concur in our opinion that this staff is not sufficient to properly attend to so large a number of insane and helpless human beings. We would suggest that an attempt should be made to classify the patients, so as to separate, to some degree, the idiotic children from the old and noisy lunation. The night attendants should furnish written reports of the various changes which may have occurred to the patients during the night, and some means should exist of recording their attention and wakefulness during their hours of duty. APP. F.]

New day-rooms and sheds have been erected at right angles to the Briver original building, by this means forming a yard used by the inmates. Workhouse. The situation of these buildings, however, shuts off the view of the surrounding ground, and deprives the old wards of much light and air. The day-rooms and demotories are large, airy, and well ventilated,

The latter rooms are heated by hot water pipes, but we think that the Heating. temperature of those apartments should be recorded every night and

The clothing of both sexes appeared fairly good, and we saw no reason Clothing. to complain of want of cleanliness, but we are certainly of opinion that the supply of baths is inadequate.

The water-closets are also of an antiquated type, and insufficient in Water closets. number.

We have again to point out that it is not our intention to throw blame on anyone in any remarks which we may have made.

The Master has many other equally large departments to attend to, and it is impossible to suppose that he could spare time to study the

special wants of the insane. Similarly the Medical Officer could not, without entirely neglecting his other arduous duties, properly supervise such a number of the insune, who, if located in the asylum, would have the sole attention of at least

one medical attendant. The official in charge of the department, who has spent many years of service in charge of the ineane, and who undoubtedly gives her best energies and acquirements to the care of those under her charge, cannot have had now means of scauiring any knowledge of the advancements which have been made of late years in the treatment of insanity.

#### CORK WORKHOUSE.

Cong We saw to-day all the inmates in the Cork Workhouse classified as Inspected as of unsound mind-166 women and 59 mem. With the exception of the 24th April,

extremely limited space set spart for the female lunation, we had no fault to find with the treatment of the women, rather we would wish to Condition of record our opinion that the highest praise is due to the official (Miss famale patients Fenton) in charge of these unfortunate human beings who certainly require the very closest attention and the most unremitting care. We found them all properly attended to, clean in their persons, and in their bedding, many of them usefully employed. Such a result is certainly deserving of the highest commendation when the fact is taken into consideration that the appliances for their care are of the most meagre doscription. The day-room, dining-room, or rather living-room, is a ties, wooden shed; their laundry is small and ill fitted for the purpose; the only supply of hot water has to be obtained from this, and carried to the wards; the only place for exercise is a miserable yard barely large Exercise. enough to allow all the women to get into it; the only assistance Attendants. afforded is one paid attendant, and a few pauper nurses.

# SOUTH DUBLIN UNION WORKHOUSE. We visited to-day the South Dublin Union Workhouse, and saw all

SOUTH DUBLIN WORKHOUSE Inspected or 10th July, 1890,

those furnation classified as of unsound mind—124 women, and 88 above.

The founds huntil division consists of a long corridor with concrete with stopping accommodation for fifty-six patients, while update area was along room solded the side dominiories, one where dominiories are two large rooms called the side dominiories, one

milition destributed by the Lo Horstep of Southernpron Library Digitisation Uses

APP. F.1

accommodating twenty-three Protestants, and the other sixty-two Catholic patients. There is also a bath-room, lavatory, and w.c. in Domin good order. In front of the building is an airing court, the surface of which is concreted around two grass plots. At one end of this yard is the attendant's dwelling, and at the other end a covered shed where those patients, who are able to go out, can sit.

Sours

The male department comprises three dormitories on the ground floor, Accommodaand a long and narrow room which serves as a dining-hall and day-room. while upstairs is a small and low ceiled hut rather bright dormitory (No. 6) for Protestants, and two other dormitories, long, narrow, and low, like the dining-room, underneath. Every effort has been made to ventilate these rooms, but the insane require of all things pleuty of elbow room, and this is just what is wanting in their accommodation in the South Dublin Union; the male division being especially cramped

tion for males.

and confined. There is a long and narrow airing vard for the men, divided into two Exercise. by four single cells which are now happily condemned. This yard is concreted and has an open shed on one side furnished with seats, but it is altogether too small, and too close for the exercising of such a num-ber of male patients. We would suggest that a walk should be made round the vegetable farm, and that those of the insane who are physically capable should go there daily under proper supervision for extended exercise, and that they should occasionally he sent for walks beyond

the workhouse confines. All the dormitories are heated by open fireplaces, or stoves. Many Demissries. of them have cross light and ventilation. The boards were very clean. The patients' clothing appeared sufficient, and their sheets and body Clothing. linen are changed every week.

Bolding.

The bedding consists of :-A twill coverlet, A pair of blankets. A pair of sheets,

A straw tick, and

A straw pillow.

The patients' beds seemed to us clean and well 'attended to except in a few cases on the female side which needed more attention on the part of the nurses. Some of the bedsteads are iron, but many of them are wooden box heds, and all have straw ticks. We consider such ticks objectionable for the use of the insane, and we would suggest to the Guardians that they should substitute for them properly galvanised wire mattresses (guaranteed not to rust) covered with a light hair or coir mattress. Those wire mattresses have, we understand, been already introduced on the suggestion of Mr. Rohinson, Local Government Board Inspector, into the hospital, and we think they would be found most useful in the lunatio department. There many of the patients are wet and dirty in their habits, and for such cases the straw ticks require to be re-filled every day, entailing trouble and very considerable expense. The primary cost of the wire mattresses is considerable, but experience in other institutions shows that they are ultimately the cheapest, cleanest, and best bed for such cases. The hair mattresses in these special cases should be covered with a mackintosh sheet, and with care will often last for several years, and even then if the mattress has been made in three divisions, only the centre piece will need to be re-upholstered. SOUTH DUBLIN WORKHOUSE. Baths.

From the use of straw in the bodding the lunatic department is infested with fleas to such a degree as to necessarily cause, at least in summer, which is the patients.

The patients are bathed once a week at least. The errangement for this purpose on the femules also are suitifactory, but the unite bath, which is unit in an old plunge bath, and how no direct hot water has been been also as the suition of the suition of the suition of the suition of the suition of the suition of the resident medical officer along the suition of the resident medical officer at we must expense our regert that a body of gentlemen so in hell-less two must expense our regert that a body of gentlemen so in hell-less than the suition of the suition of the suition of the suition of the suition of the suition of the suiting the suit of the bana of an ince when they have been removed beliaf put the one of the binance at a time when they have been removed.

from all modern hundre arylman. Excitement in intender is of the the very opposite of being an indication of strength, and experience has proved that the shower both is conton of strength, and experience has proved that the shower both is as a relia of the lumbracean truntarent of the imano. The medical officer in charge cutera all cases in which he orders a hadd, and we are statisfied that he is nearful in the advection of cases; in the own here we regard to have to differ from him. Two girls who had been subjected as a statistic of the control of the control of the control of the control of the control of the control of the control of the and languid circulation of one of them, indiseated the necessity for warsh and apprecia feeling nather than she shock and cold of a shower halt. We trust the Gundlann will give directions that these dispersions of the control of the control of the control of the dispersion.

Restraint, V

We found two patients under restraint; one a case of acute mania, awaiting removal to the Richmond Asylum, and the other of a boy (Kirby), who is at times restrained from tearing his clothes.

The restraint is daily and properly antered by the medical officer; pink occurring the consider any instance person who nodes medantales restraints, except is lee of the most temporary character; is not a subject for detectable in an institution on speciality insteaded for receiving and treating instales; and it may been be noted that in the new Ennacy Action contained restraints in only permitted as a means of medical or surface instancial criteriants in only permitted as a means of medical or surface. The combinated restraints is only permitted as a means of medical or surface in the contained of the straints and the criteria is sold-like.

Dietary.

Tan breasté dictory has been evidencily framach by the Gunzilians with very generous historian, and yet we cannot consider it as acidiscistory in revery respect. Seven positent are on heef tru, thirty-eight on clops, in revery respect. Seven positent are on heef tru, thirty-eight on clops, in revery respect, and the control of the con

a few ounces of American bacon and some cabbage on Sundays, might, we think, be substituted for the fresh mest dinner on those days. Such a scale would not, we believe, be more expensive than the present, but WORKHOUSE.

of course we only suggest it for the Guardians' consideration. The most important point in the treatment of the insane is to find Employment.

suitable occupation for them, and we were sorry to find so few of the insane in the South Dublin Union usefully employed.

A few of the women were knitting; but the rest and all the men were sitting aimlessly in the sheds or wards. We do not see why, as in other workhouses, many of the insane women could not be amployed at laundry work (one of the best means of treatment for this class), if only a small laundry were fitted up for their use. As many of the men as are able to work should be employed on a portion of the vegetable farm given up to them for cultivation; while the less robust could; at least tease hair, and probably a few of them might be taught unbolstory under a competent instructor.

In concluding this memorandum, we desire to record the impression produced by our visit, that the Guardians of the South Dublin Union are sincerely anxious to improve the condition and surroundings of the insane committed to their care, and that they are treated in many respects with marked liberality.

(Signed).

GEORGE PLUNKETT O'FARRELL, | Inspectors of R. MAZIERE COURTENAY,

# LONDON-

WORKHOUSE. Inspected on 19th May. 1890.

Condition. Dictary. Bedding. Day-room.

Cells unsuitable.

Bathing.

LONDONDERRY WORKHOUSE.

The number of inmates classified as insane in the Londonderry Workouse consists of 13 males and 14 females. Of these three males are

shargeable to the asylum, and are still retained on the books of that institotion. All appeared to us to he kept with due regard to cleanliness and neatness, and to be carefully looked after. Their dietary is classified as that for the able-hodied, but they receive in addition new milk for hreakfast. Their bed-clothes were of good quality, and consisted of a pair of sheets, a pair of hlankets, one quilt, a straw tick and pillow, the whole weighing twenty pounds. The day-room for the men appeared particularly bright and cheerful, well furnished with pictures and books, and had an air of comfort and cheerfulness which deserves the highest commendation. We cannot, however, too strongly urge

on the Guardians the advisability of doing away with the three cells or single rooms on each side, which are dark and badly ventilated, and are quite unnecessary for the requirements of lunatics in a workhouse. If the insane are restless or noisy at night, they are suitable for treatment in an asylum, and should be transferred there. If these cells were done away with, much better air and light would be afforded for the accommodation of the patients. On the female side the huilding containing the day-room and a dor-

mitory, with a lean-to roof, should be carried up another storey on a level with the rest, thus affording much more space, The bathing arrangements consist of a bath in a wooden house in the yard on the male side, and of a tub on the female side. We trust that the Guardians will see their way to erect a proper bath-room, with

(Signed).

hot water on each side, for their insane inmates.

GEORGE PLUNESTT O'FARRELL, Inspectors of

2nd June, 1890.
